Why should you care if Bill Cheek or anyone else for that matter does or does not flame someone? What ever he, or anyone else does in this news group is their responsibility, not yours.

There are only two reasons why you would take it upon yourself to chastise Cheek for what you perceive as misbehavior. Could be one or the other, but I think it's both.

One: You are a self-appointed net cop with no life that has to belittle others to make yourself feel better about yourself.

Two: You have a vendetta against Cheek for what transgressions that you believe he committed against you in the past.

Either way, your behavior is tacit proof that evolution can go in reverse. All these years you've been getting publicly spanked by Cheek, myself, and a multitude of others and you still haven't learned a thing. You're still just a pitiful fool.

It is a group of hams and non-hams that report bad weather conditions
via the internet/www, phone calls, or amatuer radio. They also report
in results of bad weather.

If you are a non ham then give a listen to the 2 meter or 70 centimeter
ham bands.

Here in the Cleveland Ohio area try 146.8800

To hear the Space Sshuttle try 145.6700

Back when it was legal to listen to baby monitors, a close neighbor`s
wife would have "a friend" over about 3 times a week. His name was either
Oh God Yes, or Don`t Shoot Yet Jerry.(I never did know for sure)
It all came to a sudden stop when the husband came back home after about
an hour of work, just in time to catch them in the kitchen, & it wasn`t
waffles he was eating at the table.

I just loved to listen to baby monitors.

Happy Scanning,
Charlie

I'm experimenting with a new scanner that is capable of receiving signals in the 225 to 400 mhz range, which I believe is designated for military aircraft.

Anybody out there have any experience receiving signals in that range?

I'm not near an air base or anything, so not sure if I should expect anything at all in that range...

Thanks!

- Dave

10 meters rule ! I've done it in europe , alot of ppl use it. it's fun too !
You get QSL cards and stuff. I recomend radio : Lincoln made by french co.
President. Reasonable price, great radio. 26-29.999 mhz TX/RX
check their site at. http://www.partal.com/president_cb/

10 meters alowes you to DX in SSB , in case of N America , i would say
transmissions around the whole S America. USA and CAnada. if you get lucky
Europe as well !

I do, but I must worn you..... if you do a display test, you will have to reset your whole scanner in order to use it again, at least I had to...

For both of these "tricks" you need to hold the specified buttons and turn on the scanner while holding them down...

For display test: press - 9+2+L/O (lockout)
For scanner reset: press - 9+2+HOLD

1994. ICOM 8500 antennas

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: robertr@spice.mhv.net
Message-ID: <6m1olikkb1@news.mhv.net>
Source record: 156962

Are there any good indoor antennas that will work with the ICOM 8500 scanner on 30mhz and up? I'm especially interested in the 30-500 mhz range, and since it doesn't come with a built-in whip antenna for basic stuff, it comes up mostly empty on VHF/UHF, although the Kiwa pocket loop seems to be allright on shortwave. I had an MFJ 1026 that claims to have 30-200m hz coverage but haven't been able to get the right connectors for it.

Also, if there's no indoor option, is the AH7000 optional antenna any good and can it be mounted in a small space?

Howdy.

I have a Yaesu FT-50R for sale or trade for a handheld scanner. The Yaesu is about 1 year old, rarely used, and totally mint. It has the optional keypad and has continuous coverage (no gaps).

I'd like to trade for a Yupi, Icom R10, Sony IC1, or AR8000 handheld. We can trade + or - cash for inequalities on value. Mint scanners only please....

I'm in the San Francisco/San Jose area...please email if interested.

Cheers,

Tom

--OR-- You could simply purchase an inexpensive used whole receiver all ready to go complete with a 70v PA amp plugged into the output stage. I have recently run into such a device on the used shelf of Purchase Radio in Ann Arbor, Michigan. The device was appears to have been originally made for elevator duty and is similar to the Muzac System units. The first oscillator would be tuned to the FM broadcast carrier of your choice and then the sub-carrier decoder tuned to the frequency of your choice. The device had an internal power supply and looked ready to play with!

Purchase Radio has been in business a long time (I think about 50 years) and their used shelves occassionally have treasures. It is usually nice to buy from a real store if you like being careful with your money. They could ship UPS I'm sure and probably take credit cards. Dan is the store manager and probably is the only one there that knows anything about the device. He is on vacation until Wednesday but if one wanted to call soon Paul might be a good choice. The telephone number is 1-734-668-8696 or 1-800-783-8696 although the toll free number may only work in Michigan, I'm not sure!

Good Luck......Joe / W8SS

Mike:

You're probably right. Local shops around Michigan are telling buyers they don't even need to get the license for the GMRS units. Seems the FCC has lost interest in a lot of things these days.

I picked up a couple of the Motorola TalkAbout Plus, FRS units... they work very well for only 1/2 watt!

It is a love - hate relationship with Business Band Radios being only business, and GMRS Band Radios being only family/recreation.

Anyone have mods or detailed information on this scanner. I am fairly new to the hobby and am looking for the "true" limits of my new toy.

Also it would be much appreciated if anyone knows where I can get freq's for Southern Minnesota near the Albert Lea / Austin area.

Thanks in advance.

2002. Re: FS - AOR-1000 scanner

Check it out: Smacksie just let a flame lapse across two other news groups: rec.aviation.student & rec.aviation.homebuilt. He must plan on responding to whacks from over there.

You know: This cross-posting example must mean his *actual* number of posts must be astronomical! I just don't see him as a high speed typist; he must be at it *all day*.

Let's take this a little further. Hmmmmmmm. So he's on the USENET all day and still has time to dabble in ham radios. What kind of employment would permit this? I'm drawing a blank.

Hey Wait!: Maybe he's some sort of real life genius! Or some sort of marketing guru! I mean he's a total asshole here, but in real life he could be......Naaaawww, no friggin' way.

This dude's warped. I've run into people in real life with this sort of dementia: Their circular logic makes them exasperating to deal with. You know the type: The boss hired him 'cause he seemed like a quiet (but odd) boy, but a couple of months into employment, everybody's ready to strangle him.

He's always calling in sick or just doesn't show up. But he's got some bizarre reason for his absence when he returns. The boss finds his usual management techniques are utterly useless on this creature. Loony boy's read the operational procedures for the shop and uses obscure interpretations to shirk work and foster animosity in the workplace.

Boss gets complaints from all over the company. Boss attempts to impose severe administration action. This *usually* succeeds in the persuading the employee to resign.

No such luck with loony boy; The boss just gets a fusillade of loony threats of lawyers and lawsuits. However, the lawyers and lawsuits do materialize.

The case is weak. Management knows they'll win the final judgment. But legal costs and caseloads could drag it out forever. Besides, who knows whose sympathy "loony boy" may garner along the way. Much safer to buy him out now. It'll be a disability settlement. A nice little check to keep him close to his mailbox and off company property. Something nebulous like "stress dysfunction".

You *know* this happens. I've seen it more than once. You have too.

Let's review:

(1) Loony boy has enough time to play all day on the USENET and dabble in ham radios. The number of posts in this NG are obsessively high. There's no way to get an accurate count of his forged posts. He *has* to be at it ALL DAY!

(2) There is *no way* his warped little perception of the world can be contained only in this NG. He has to exhibit that same loony logic in real life that he blurts forth here. He's loony boy in real life. No-one wants to touch him with a stick. He's a genuine mental leper.

So how does he fund his existence? One of three ways:

(A) He lives at his parent's house.

(B) He collects a disability check.

(C) Both.

So.......Which is it?

You friggin' loon.

>Would it give you a heart attack If the Liberty Net was on EVERY NIGHT!

Hey, now that's not a bad idea. While we're at it, how about the creation of a 10-meter version, now that the band is coming back. Would extend The Great Liberty Net's availability to Novices and Tech Plusses. As an added bonus, all freeband CBers with "export" or modified 10-meter ham radios would be able to listen as well. Great way to increase listenership, participation, and awareness of The Great Liberty Net.

2015. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6m26br$p72@news.Hawaii.Edu>
Source record: 156983
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

The post was a forgery. It is one of many such forged posts by Jeffry Lynn Morris. He is the same person who posts regularly as Laffer, Lennie, ASI, Q Salt, etc. He hasn't the nerve to admit who he is but many of the members of RAS and RAH know him. I have his home address and telephone number on file.

Eventually I'll get around to locating his employer. At that point I will begin forwarding copies of every single post he makes to their personnel department. This is a very effective means of dealing with intractible flamers. It is not necessary to make any claims at all about their actions. Just let the employer know what they do and then spread the facts all over Usenet if it continues. A few dozen forwarded posts will usually suffice. It's really the best kind of justice as the abuser's own posts bring about his (sometimes her) demise.

It is amazing how fast an abuser can be flipped clean through a wall by this simple, straightforward technique. It has the added benefit of sending the blood pressures of several other rather nasty folks through the roof, possibly bring on a cardio-vascular accident. Nifty.

Note: the poster above calling himself "Charlie Dwenger" has an interesting thing in common with Jeffry Lynn Morris. He uses Morris' smart-quotes. Hmmm.

Blue Skies,
Robert L Bass

2017. Re: What To Buy? Scanner For Winston Cup Racing - Advice Needed

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: John Habbinga <habbinga@wt.net>
Message-ID: <6m2cehvlm1@news4.wt.net>
Source record: 156985
Cross-posted to: alt.radio.scanner,rec.autos.sport.nascar,rec.radio.scanner

What about the RadioShack Pro-74? It is specifically designed for using at the racetrack. It has a special memory function that lets you assign several frequencies to a racecar number. I don't think you should need a scanner with any kind of audio modification. There are plenty of racescanner grade headphones that muffle the race track noise just fine.

The tones are not "filtered out". They are sub-audible. That means that the frequency is too low for humans to hear. The tone is present in the signal, you just cannot hear it. In your example, PL 162.2 means a CTCSS tone of 162.2 Hz. The whine that another user refers to is not caused by CTCSS, as they cannot be heard.

Why are you cross posting this to rec.radio.scanner?

Noone here cares about the flame war that you're currently involved
in on rec.aviation.student and rec.aviation.homebuilt.

> Note: the poster above calling himself "Charlie Dwenger" has an

FYI, Charlie Dwenger is a regular poster to rec.radio.scanner, so I
think you own him an apology.

Mr Bass,

Please do NOT start another flame war over here.

Please take your little flame war back to RAS & RAH and
keep it there! Leave RRS out of it!

Regards,
John

I didn't initiate the cross-post to RRS. That was the work of Jeffry Lynn Morris, who forged my name in the start of the thread and then spammed your news group with it. Some guy from RRS added to the thread. I only replied that it was a forgery and not my post to which he was replying. If you don't want replies, don't add to the thread. Ignore everything that comes from Jeffry Lynn Morris. Most of his stuff includes "smart quotes" (left-hand quotes). He often forges my name and e-mail address. At other times he uses a variety of aliases like Q Salt, Laffer, Lennie, ASI, etc.

BS, Bass. In the first place I presume you`re referring to me, and I forged nothing. In the second, I did not cross post to RRS. In the third, crossposting is only SPAM if it`s commercial (You know all about that, you`ve been called for spamming before)

2026. 2nd Straw Poll: rec.radio.amateur.* reorg

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: Jeremy Billones <billones@primenet.com>
Message-ID: <6m30dqehu1@clarknet.clark.net>
Source record: 156994
Cross-posted to: rec.radio.amateur.space,rec.radio.noncomm,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

LAST CALL FOR VOTES (of 2)

Votes must be received by 23:59:59 UTC, 22 Jun 1998.

This vote is being conducted by a neutral third party. Questions
about the straw poll should be directed to the rec.radio.amateur.*
Working Group at <rra-wg@theporch.com>

Votetaker: Jeremy Billones <billones@primenet.com>

STRAW POLL Q & A

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV
process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?
Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which
initiated the last major reorganization in 1993) is the point-of-contact
for questions about this opinion poll. Principal members are Paul
W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg
member, Gary Coffman, KE4ZV, also endorses this opinion poll. this
opinion poll will be conducted by an unbiased third party from the
Usenet Volunteer Votetakers (UVV), Jeremy Billones
(billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborious and time-consuming, and perhaps unnecessary), we will conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV). During the poll, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I disagree with this newsgroup's charter or I believe that this newsgroup's existence should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the preceding 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If this opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, this opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)
rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are
principally used by readers of rec.radio.amateur.*, and their fates
would substantially be decided by any significant reorganization of the
rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.*

reorganization, rec.radio.cb is not included in this opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups
(except for rec.radio.broadcasting and rec.radio.info, which are
moderated). In addition, the following individuals were consulted prior
to this announcement (note that consultation does not necessarily
imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list
gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization,
former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV
process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group
_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Vote "YES" for all of the existing rec.radio.amateur.* newsgroups.

Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?

Vote "NO" for all (or all but one) of the newsgroups.

Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?

Vote "YES" for any newsgroups that you wish to remain unchanged, and
vote "NO" for any newsgroup you wish to have reconsidered in a future
RFD/CFV.

Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?

Since this opinion poll is for both the existence of given newsgroups
AND their current charters, you should vote "NO" for that newsgroup.
Again, this is a non-binding opinion poll simply to determine if current
newsgroups should be considered for modification or deletion, not a vote

to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by opinion poll. A future RFD/CFV would have to be initiated to do this. You are, of course, welcome to express your opinions concerning new newsgroups by posting them to rec.radio.amateur.misc (*NOT* by E-mail to the vote-taker).

Q: I have no opinion, what should I do?

You may wish to read the preceding 30 days of public discussion on rec.radio.amateur.misc about this opinion poll to develop your own opinions (go to http://www.dejanews.com/ and search for "STRAW POLL"). If, after reading the public discussion, you still remain undecided, you may abstain from this opinion poll. You may do so informally by not participating in it at all, or formally by explicitly voting "ABSTAIN" for all of the newsgroups.

IMPORTANT VOTING PROCEDURE NOTES:

Standard Guidelines for voting apply. One vote per person, one account per voter. Votes must be mailed directly from the voter to the votetaker. Anonymous, forwarded or proxy votes are not valid. Votes mailed by WWW/HTML/CGI forms are considered to be anonymous votes.

Vote counting is automated. Failure to follow these directions may mean that your vote does not get counted. If you do not receive an acknowledgment of your vote within three days contact the votetaker about the problem. It's your responsibility to make sure your vote is registered correctly. Duplicate votes are resolved in favor of the most recent valid vote. Addresses and votes of all voters will be published in the final voting results post.

HOW TO VOTE:

Extract the ballot from the CFV by deleting everything before and after the "BEGINNING OF BALLOT" and "END OF BALLOT" lines. Don't worry about the spacing of the columns or any quote characters (">") that your reply inserts. Please, DO NOT send the entire CFV back to me!

Fill in the ballot as shown below. Please provide your REAL NAME and indicate your desired vote in the appropriate locations inside the ballot.

When finished, MAIL the ballot to: < voting@clark.net >
Just "replying" to this message should work, but check the "To:" line.

Examples of how to properly indicate your vote:

[YES] example.yes.vote
[NO] example.no.vote
[ABSTAIN] example.abstention
[CANCEL] example.cancellation

DO NOT modify, alter or delete any information in this ballot!
If you do, the voting software will probably reject your ballot.

If these instructions are unclear, please consult the Introduction to
Usenet Voting or the Usenet Voting FAQ at http://www.iki.fi/~jpatokal/uvv.

======== BEGINNING OF BALLOT: Delete everything before this line =======
.---
| 1ST STRAW POLL: rec.radio.amateur.* reorg
| Official Usenet Voting Ballot <RRSP-0002> (Do not remove this line!)
|---
| Please provide your real name, or your vote may be rejected. Place
| ONLY your name (ie. do NOT include your e-mail address or any other
| information; ONLY your name) after the colon on the following line:

Voter name:

| Insert YES, NO, ABSTAIN, or CANCEL inside the brackets for each
| newsgroup listed below (do not delete the newsgroup name):

>any help would be appreciated.

If you're handy with breadboarding, pick up an LM565 PLL chip at Radio Shack and wire it up. It's a relatively simple IC that requires no external crystals.

Some FM receivers don't filter the 58, 67 and 92 kHz subcarriers from the headphone jack, so you could drive the input of the 565 without opening up the radio. The SCA circuit will work best, however, if you tap the discriminator inside the receiver.

2039. Civil Aviation - North Atlantic Mega Log

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.980615162712.5415H-100000@alfa.ist.utl.pt>
Source record: 157007

Hello

You can find in this email One of my biggest logs with about 70
flights listened on 5616, 4675, 5649, 6628 and 5598 KHz in only 2,5 hours.
Also there is another log for flights to/from the Caribbean
(1998/06/14).
Hope you enjoy it.
My apologies for the delay in sending it but my Internet
Connection was down for a week.
If you want to know how the airspace looked like just download:

Mega Log-> http://www.geocities.com/SiliconValley/Lakes/9420/shotex4.gif
to/from Caribbean area->
http://www.geocities.com/SiliconValley/Lakes/9420/shotex6.gif

It's very interesting to see the Route organization into several
parallel tracks under Gander and Shanwick Controls.

Best regards, Andre Brandao

Hello

Im posting this time a log created last Friday night. All the
flights were listened on 6565 KHz (Dakar Control) with strong signals.
I highly suggest you to download the following file just to see
how is this airspace so well organized...flights ordered by altitudes into
one route. It's possible to see how each flight is separated by altitude
and horizontal separation (the circles around each aircraft must not
contain any other aircraft to avoid any possible mid-air colision).

http://www.geocities.com/SiliconValley/Lakes/9420/shotex5.gif

Really hope you enjoy it.

Best regards, Andre Brandao

Actually there is only ONE person out there who posts bad things about Robert L. Bass. That ONE person used LOTS of different names and does many forgeries just to irritate Bass. We ALL know that there couldn't possibly be MORE than one person who thinks Robert L. Bass is anything other than a moral, intelligent, upstanding, fighter to truth and justice who would NEVER do anything unethical himself.

2043. Re: trunktracker question

Newsgroup: rec.radio.scanner
Date: 1998-06-17 00:00:00 UTC
From: "Max A. Schneider" <schndrma@concentric.net>
Message-ID: <6ma1b2$g3q@examiner.concentric.net>
Source record: 156712

I just bought the 2050 recently. Overall, it's a nice unit. Now, if my local constables would start using their trunk system, then I'd be much happier <g>.

To answer the questions:

* The PRO-2050 handles Type I and II Motorola systems. I'm new to trunking, so I don't know if this is the same as SmartNet.

* The PRO-2050 allows you to scan only one bank at a time in Trunk mode. The bank also can only contain one trunk system, as the scanner will lock on the first data channel it comes across. Since you can only scan one bank at a time, this means I'm also limited to 29 channels per trunk system (1 data + 29 voice = 30 channels/bank -- the 2050 has 300 channels in 10 banks of 30).

Hope this helps,

Max

Hey checkout the uniden web page. They have refurbed units "as good as
new" for $150 for the same trunk tracker as RS. Just bought my TT from
RS for $199 and cried when I saw the uniden page.

Will

John "I'm the Queen Weenie around here and don't you forget it"
Mackey-KA0SSF showed his hypocrisy again:

> MOST people are smart enough to know better than to post a binary
> to a NG like this. Now you know why so many people hate you!

Yeah, just like that postcard you posted that you claim was from Bill
Cheek. The only thing that stunt proved was *someone* sent the postcard
from San Diego (evidenced by the postmark) didn't like you. You never
proved conclusively that it was Bill Cheek.

THAT'S RIGHT!!! THAT'S CORRECT!! BUY THAT MAN A $10 KAZOO!!!! DING!
DING! DING! DING! DING! DING! DING! DING!

Wow, looks like the facts are once again no match for your brilliant
powers of deduction Sherlock.

Tell me something John. Were you always a fruit loop or did you have to
practice a while before you got it right?

You have taken stupidity to a new level, almost an art form. It must
take real talent to be so stupid and yet keep from accidentally killing
yourself. Darwin must be spinning in his grave. If he were alive today,
he would burn his notes and become a monk. Creationists around the
world must treat you like the Holy Grail.

You need a slogan John. How about: "Heaven doesn't want me and Hell is
afraid I'll fall in." Or maybe: "Stupid is as stupid does". No wait, I
got it:

"Have you seen my eyelids?"
BWAAAAAHAHAHAHAHAHAHAHAHA!!!!

Mr CTPDS49--
Yes, in fact it's quite easy-- just connect a 4.9 kiloohm resistor between capacitor C23 and the collector of transistor Q45. Adjust R12 for maximum decryption.
Good Luck!
;-)

Could it be true? Could the self appointed r.a.s. Messiah be a charlitan? A hoax? An inbred pathologiacal liar? Indeed he is. And since he is always shouting "Prove it, prove it" then I will. The following is a direct quote from our beloved bozo himself, aimed right at Bill cheek at what WAS an on-topic and completely innocent thread:

<Begin Quote>
Re: FS: 2 8Meg, 72pin, EDO RAM $40.00 (John Mackey - KA0SSF , 0:49)

Bill Cheek wrote:
>
> Mike#Kilo_Alpha_Tango_Zulu <mcguyver@bv.net> wrote:
>
> > 2 - 8MB 72pin EDO Simms, each, $22.50, both for $40.00 plus 3.00
> > SHIPPING
>
> You're kidding?
>
> You can buy a 32-MB EDO SIMM for around $35 now.

eat my shorts and pack sand.

<End Quote>

A dejanews archive search will undeniably prove this is true and correct, for those who may have any doubt.

So, Mr. Mackey, SHUT UP YOU SNIVELING LYING LITTLE WEASEL!! This proves what I and others have been saying about you all along. If there had been any doubt in my mind that what Bill Cheek said about you is true, that doubt is now COMPLETELY GONE. You are a liar, a troublemaker, a moron and a fraud. Nothing you can say or do is ever going to convince me otherwise.

I have spoken.

2062. Re: trunktracker question

Newsgroup: rec.radio.scanner
Date: 1998-06-17 00:00:00 UTC
From: "Kent W. Smith" <kents@nortel.com>
Message-ID: <3587DB1B.2632@nortel.com>
Source record: 156774

I noticed that RS had 2 trunk tracker models (apparently made by
but not offered by Uniden) on sale; 1) a handheld 150 channel
and 2) a base model with (if memory serves) 200 channels.

I recently bought an 895XLT Uniden model (and LOVE it btw) and
in learning how to program the trunk bank - I noticed something
which you should definately obtain clarity on before buying one
of the sale scanners.

o The max number of trunked freqs in a group is 29 (Uniden manual)
o My scanner (and I'm presuming the RS sale models as well) only
allow you to trunktrack in a single bank (A-J, 30 ch ea.).

- therefore, my question and a potential design issue is ...

Unless you have banks with 30 channels, can you include up to the
maximum of 29 channels in the trunk group, or are you limited
to 20 (in the case of a 200 channel scanner) or 15 with the 150
channel model?

Perhaps someone can post a reply with the answer.

Either; a) the RS models allow you to define trunks in multiple banks
or
b) the RS models will not allow you to track the maximum #
of trunks potentially definable in the motorola system

AGAIN - I'm questioning - not accusing.

Kent

2065. Covert cellular RX with Yaesu FT-50R

Newsgroup: rec.radio.scanner
Date: 1998-06-17 00:00:00 UTC
From: abtownes@hotmail.com
Message-ID: <6m9gndrpc1@nnrp1.dejanews.com>
Source record: 156777
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

The FT-50R has a capability unmatched by any receive-only scanner that I have ever seen. Suppose you see someone in a public place using a cell phone. How do you listen to the conversation? The FT-50R can be set up to scan the cell mobile transmissions, about 825 to 850 MHz with a 15 kHz spacing and a repeater offset of plus 45 MHz. Of course, it does not transmit on 800 MHz, but when it stops on a mobile signal, you can quickly press PPT, which stops scanning, and then press FV to switch up 45 MHz. That may get you both sides of the conservation. If it does not, you can switch back and forth as needed with the FV key. You do not hear input frequencies unless the phone is nearby (a few hundred feet?) so the band is not cluttered and you can easily find the phone you can see. The only problem is that it takes about 100 seconds to scan the whole 24 MHz of the input band. This problem is easily solved when you see the freqs in use by the local monopole. They are generally grouped within a few MHz, scanned in less than 10 seconds, once you limit the scan range to that. Let's see anyone do this with a BC-200XLT or a Pro-43.

-

This discussion assumes you freebanded the Yaesu. The recently manufactured units apparently do not take the freeband mod, but it may still be possible to do this on an image frequency. See my post of 6/12/98 in DejaNews. My Yaesu gets cell on the image as well as it does direct. I would just rather be looking at real frequency numbers. Also, I think there is some interference in the 960 to 980 MHz range from paging transmitters or something. The nerve of those people transmitting on their licensed freq. and interfering with our image reception. But do the new units that cannot be modded still get cell on 960 to 989 MHz? Or did they change more things to make that impossible? If you know, please tell me.

-

This may be the first time anyone has ever used the "hear input" capability of an HT to hear a repeater output after scanning the input band. Try it out the next time you visit Canada where it is legal.

Al

Radio Shack and Opto-Electronics sell frequency counters; these are
devices that tell you what frequency someone and/or something is
transmitting on. Some of these devices; can even be hooked up to your
scanner; from what I read.

>Has anyone had experience with the UNIDEN BC-350A???
>The UNIDEN refurbished shop has them for $80 right now

I have a BC 450A, which is the identical model. I park it on either Aircraft search or Marine search. It is a good scanner, and more sensitive than most.

Remember though, Radio Shack is closing out the Pro 2045 for $99 right now, and that would give you a keyboard (which you know the 350A doesn't have), as well as 225-400MHz.

But if all you want is the 118-136 VHF Aircraft, there's nothing wrong with the 350A. Folks who want to program frequencies into the available channels sometimes complain about the difficulty programming the 350A. But I never program freqs into mine; I just use the Service Searches.

< great evidence snipped >

Yes indeed, little Toilet Boy is a liar and a fraud.

He claimed he had written many technical articles. I proved him a liar.

He denounced the merits of WD-40 in electronic applications. I (and many others) proved him wrong with a well researched endorsement from Roy LeWallen, W7EL <w7el@teleport.com> who is an American Radio Relay League Technical Advisor and happens to live in the Portland area. The ARRL by the way, is the group that certified Toilet Boy as a Volunteer Amateur Radio Examiner.

Scum bag claimed to have a Masters Degree. I proved him a liar there, too.

Most recently, he claims his little antics with his headers are for the benefit of mankind because he is testing spam proof email software. I proved him a liar there as well.

Toilet Boy fancies himself a leader in this news group; in his prozac induced dreams. Mackey is so inept he couldn't lead willing lemmings to a cliff.

Well,...sure. Try plugging in "USENET FAQ" into your favorite search engine.
You should be able to find the information you need to set up a moderated scanner
group. Of course, then you've got to figure out who's going to be the moderator.
That's not as easy as it sounds. Seriously. No "whack" intended.

Good luck.

2089. Re: John Mackey - Once a Liar, Always a Liar

John "Now that Richard Simmonds has left me, I wonder if RuPaul is
available" MacKey - KA0SSF lied as usual:

> Why is it that just because I make a small adjustment
> in my header info it becomes interpretated as an
> attempt to bypass kill files.

With literally dozens of people slamming you into their kill filters
hourly, there is not other plausible reason for you to change the
headers. You simply want to shove your misguided lunacy up people's
noses. What a pathetic and lonely fool you are, Toilet Boy.

> Talk about pole vaulting over cracks in the side-walks!

It hardly takes such effort to catch you in another one of your lies.

> You are make a lot of something about absolutely NOTHING!

Yes, you are nothing, Toilet Boy.

2090. Re: Yo, Mackey? Front and center tuit suite!

John "Queen Weenie of the Portland glory holes" MacKey - KA0SSF whined:

> Because I care about the integrity & fairness of this newsgroup.

ROTFLMAO. You just want to preach the gospel according to Toilet Boy.

> Many of the problems in this world today happen because people
> DON'T care!

You must have been dumpster diving for food again and found a Leo
Buscaglia paperback book and read the back cover by accident.

> What would have happened if no one would have cared about Hitler?

So, you admit you are trying to follow in the footsteps of Hitler and
the first conquest on your sniveling way to global domination is going
to be the scanner groups on the Internet. Trying to compare yourself
to Hitler is laughable. What are you going to do next, Toilet Boy,
try to impress us by quoting from Mein Kampf?

> CARING people preserve or freedom & integrity!

That leaves you out.

> Then why do you take it upon yourself to write messages like
> this to me?

Because I know just how much it riles you when I'm right about
you and I say so in public. You're still a liar, fraud, and a fool.

>

Somebody is going to come along and answer the question about the coax. I can't remember what the advice was, other than "find the best you can afford, then spend a little more."

But the grounding of the antenna is the same question I posed. I ran the aluminum ground wire from RS from the antenna to an iron forming stake that I drove in the ground. But everybody says that's no guarantee my stuff won't fry.

Mine's pretty vulnerable. I've got my Pro 2032 patched into the sound card of my 'puter. One good strike and I'm screwed. Everybody here commented on certain devices that do this or that to protect your system when lightening storms are in the area. But no-one would confidently assure me that any of those devices are a better safeguard than unplugging your antenna lead from the back of your scanner when lightning is in the area.

Uh......me again.

My liability is a $200 scanner on a $1400 computer. Got a $15 dollar RS antenna on the roof with an aluminum ground wire running from the mast to an iron stake in the ground. (And when Mr. Lightning comes around I just disconnect...the antenna........and stick theendinamayonaisejar AND HOPE Mr. Lightning doesn't knock while I've got my paw on the BNC connector).

Can you tell me more about the NEC standard?

I agree. I went through a similar situation with Uniden. It seems so stupid to me why these radio companies don't publish the command specs in the manual. I would think the more people you have writing software for your radio, the more radios you'd sell! Go figure..

If you can get your hands on some software that runs it, and have a second computer available you can monitor the serial data going back and forth. That is how the command set for the BC895 was derived (which STILL hasn't officially been released - can you believe it??) Look in dejanews for posts by A. Giammarino for details on how he did it.

by the way,

das Problem l��t sich mit Cityruf und Pagemobil-Software l�sen. Diese Freeware kann man n�mlich so programmieren, da� der Empf�nger des Calls zur�ckrufen und eine PIN eingeben mu�. Sonst wird die Benachrichtigung in einstellbaren Zeitabst�nden wiederholt.

Geht aber nur mit Voice-f�higem Modem, m.E. nicht mit ISDN-Karte und Capi.

Da man Gruppenaussendungen machen kann und jedem Empf�nger seine eigene Quittierungs-PIN zuteilen kann, sind auch Massenalarmierungen kein Problem mehr.

Bill, I have been using a 2-way splitter for 2 of my scanners for many years and have had no problems. Sure all the local police, sheriff & fire are repeaters but as you know living in California the CHP does not use a repeater system.

I hear CHP cars from 75 to 80 miles away. This is just as good as my dedicated low band scanner for CHP. For some reason I have never noticed a loss on low band, just 150mhz and above. I will agree, there is loss above 150mhz, but with multiple reapeaters all around me I never have a problem.

Just my 2 cents ... <g>

John you are right. A real amateur radio is not afraid to give his
callsign, but why would he give it to an idiot like you??? Do you want to
cause him problems and drag him into this mess ??? Leave well enough alone.
If he wants you to have his call sign, he'll give it to you.

In other words (more simple for you) shut-up and go back to your little
hole and hide.

>You must have no idea the value of a Pro-2004!

Yes, it was a good deal and I do know the value of a 2004. It was worth 25 to 45 bucks more. I don't mind selling it for less because I know that if the buyer needs to replace the on/off switch I can say I was honest and more than fair. Besides it sold fast and he paid for shipping.

Message-ID: <6m854q$i8s$1@gail.ripco.com>
Source record: 156876
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am getting terrible radio interference on the VHF band (freq. 150MHz - 160MHz) during the hours of 01:00AM & 09:00AM. This occurs seven days a week in the area around Cicero & Irving Park Rds. Also appears to occur on Broadway between Irving & Addison. I have three base radios w/ three separate antennas and this problem occurs on all three radios. I get the interference on the mobile radios at the 2nd location mentioned.

Can anyone suggest what might be causing this problem. It appears to be more apparent on distant radio signals, maybe greater than 20 miles circumference from my location. I can still hear the radio signal, but there is something interfering with the signal that causes a buzzing sound to also be heard & the buzzing is louder than the vocal radio traffic.

Please send any replies to me directly via e-mail davidl@ripco.com

Thank you

2116. NEW POCSAG DECODER SOFTWARE

Newsgroup: rec.radio.scanner
Date: 1998-06-17 00:00:00 UTC
From: Zane Lewis <zane@commtech.com.au>
Message-ID: <6m86m0$4k6$1@yeppa.connect.com.au>
Source record: 156878

I am currently writing a high end POCSAG decoder and I am looking for suggestions on what features people would like in the decoder software.

The final release will be a commercial product but beta copies will be made available within this newsgroup for testing prior to final shipping.

Presently we have multiple POCSAG inputs on one PC (up to 10 incomming POCSAG data streams).
Full bandwidth analysis is performed reporting on address, idle and sync codeword utilization as well as frame utilization.
Present software oversamples the POCSAG data at 4 times oversample with some snazy algorthims for resync lost bits (it written in such a format that the 512 input can actually be anywhere from about 480 to 530 bps).

Message logging will be standard.

Anyone who makes some suggestions that are implemented will receive a complementry copy of the decoder software.

As a point of interest we are incorporting the POCSAG input into one of our paging terminals so that we can interface with third party paging systems that do not support TAP or TNPP.

Well, off the top of my head, I would suggest including Flex decoding.
This seems to be highly sought after. There is presently software to do
both, but maybe yours might be better.
Alarms for certain capcodes and logging of them.
Is it sound card or data slicer input or both?
The ability to pause the screen output so info is not scrolled off the
page,but still log info to file, so nothing is missed.
Ability to sort,group,log by agency(real time viewing of data by agency
group,such as, newspaper,police,etc. using pagers),print,edit,etc.

Sometimes they use a different frequency, depending on their location (sometimes the local fast-food place is already using the one they normally use) Most walmarts use 154.5700. If that one isn't it and neither is 154.600, then just search the 154-155 range and you should find them.

Once you do, here is how you can have some fun: Go to the automotive section. Sometimes they'll have one of the cheaper unidens hooked up and running. Tune it to their frequency and crank that bad boy up, full blast. Makes the managers and security panic! Oodles of fun! I also like to turn my own scanner up just enough, head for the music section, and follow baggy-pants-wearing little punks around the store. I could write a book: "How to clear a Walmart of gang-bangers in 1 easy step".

A nice bonus is watching the undercover security bust some schmoe. Once I got to see them fighting with a shoplifter. Get this, it took FOUR security guys to tackle this guy to the ground and cuff him, he was fighting so hard. And what was he fighting so vigorously to escape with? A VCR? A CD Player perhaps? Nope. Try a 3 pack of Fruit of the Looms. Stuffed 'em down his pants. Unreal.

>Is decoding Digital encryption possible?

Using the strictest definitions of what you asked: yes.

/* begin terminology alert */

Encoding is not the same as encryption. Mathematically, encryption functions are a superset of encoding functions.

I'm not sure just what your question is, but I'm going to make a few guesses:

1) If your question is whether it is possible to intercept a digitally *encoded* transmission, the answer is yes.

2) If your question is whether it is possible to intercept a digitally *encrypted* transmission the answer is yes, though the task is exponentially more difficult. Depending on the encrypting function used, it may be so difficult that unless the key is available, a computer the size of the known universe (whose elements are of a sub-atomic size) may not be able to break the encryption scheme within the lifetime of the universe.

3) If the question is whether the common scanning enthusiast can purchase a box for less than $1k which can do either of the above, the answer is no (for now).

/* end terminology alert */

Hi Everyone,

I am starting a collection of ALL SONY World Band "Shortwave" Radios ever made, old & new.

I have about a dozen so far and I need everyone's help to find these original radios in "mint" condition with original accessories and box for collecting.

My question is: Is there anyone out there started such a thing? (...or maybe I am nuts??!!) Where to start looking for older model SONY Shortwave World Band radios? Is there a Radio LIST of all the SONY "CRF","ICF SW" & "SW" models on the net somewhere?

If you have ANY SONY World Band Radio in mint shape, please email me with your model number and best price for a "CRAZY" collector!! :=)

Thanks in advance and any response will be appreciated!

Well in theory,

ICOM says the Q7 has a 95ma drain when there's no audio and 170ma with full audio at 3v. If these are correct, and you can measure this with your rig to verify, then:

My reference says a AA Alkaline can support 20ma for 107 hours. Now I know it's not linear but it would seem you should get at least 10 hours of full audio or about 20 hours with no audio.

Ni Cads, I believe, have about 1/4 the capacity and 75% the voltage. Which would mean about 7 hours with no audio, HMMMMMM about 3-4 hours with full audio.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, | published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both | Plectron and Motorola Alert Monitor receivers in June 1998 | Monitoring Times magazine. |

You can buy the proper replacement power cords but it's | much cheaper to drill a hole on the rear panel and solder |

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated May 20, 1998 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 8 (Sat), Quincy, IL Western Illinois Amateur Radio Club | Quincy, Illinois. Ham Radio and Computer SWAPFEST 1998 | 8:00AM to 2:00PM. The Western Illinois 1998 Swapfest | will be held at the Eagles Alps Grounds (3737 North 5th | Street) 4.5 miles north of downtown Quincy, with easy access | from US Highway 24. Admission is $3.00 at the Gate ($2.50 | in advance) per person, under 12 - Free. ARRL VEC testing | for all license classes at 12:30PM. Indoor Flea Market | space available for $5.00 which includes one 5' table. | Outdoor tailgating space - Free. Talk-in on 147.63/147.03 | MHz. Plenty of convenient parking available. Lunch will be | served on the grounds. Children's playground area. Card | Checking for ARRL awards at 9AM, 10AM, and 11AM. For addi- | tional information contact N9JF, jfunk@adams.net. |

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

last changed June 11, 1998 |

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S |

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet. |

4. If space permits, you can replace the stock resistor | with a higher value variable resistor ("trimpot") and | adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers			
Receiver Model No.	Res-istor Value	Stock Comments	
Radio Shack PRO-24	R35	33K	replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested.

Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks,

not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be

loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT

but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

Locate & identify transmitters in your area with a color RadioMap(tm)

2174. frequencies for Cleveland Grand Prix

Newsgroup: rec.radio.scanner
Date: 1998-06-17 00:00:00 UTC
From: m.sato@popmail.csuohio.edu
Message-ID: <35872a13.2652443@news.csuohio.edu>
Source record: 156946

Hi!

Where can I get all the frequencies for the upcoming Cleveland
Budwiser Grand Prix @ the Burke LakeFront Airport in early July?

TIA.Robert

JOE
ishyguy@idirect.com

Forsale:

One bearcat 760xlt scanner 800Mhz (but no cell)
100 channels (5 banks of 20chs) base or mobile. next to new, only
6 months old. comes with original box, manual and accessories.
has a external signal meter installed. and a CTCSS board installed.
also has a GE/Erricson trunk tone eliminator installed,

$310.00 US or 420.00 Canadian

I will pay priority shipping
```

2179. FS: PRO-60 $135 shipped to 48 states

Newsgroup: rec.radio.scanner
Date: 1998-06-17 00:00:00 UTC
From: rcc@ziplink.ten
Message-ID: <35874015.11930646@news.ziplink.net>
Source record: 156951

I've upgraded to a Pro-2041 and no longer need my Pro-60.

Freq. range is 30-512, 760-824, 849-869,894-9999.9875 MHz and it has 200 Channels.

Includes original box, manual & rubber duck antenna. It is in like-new condition (only used about a dozen times).

I'll pay shipping to anywhere in the continental US. Elsewhere buyer pays shipping.

Personal check or Postal money order prefered. If paying by check, please allow 7-10 business day for it to clear. Postal money order ships the day I receive it. COD OK if you're willing to pay the handling charge.

E-mail if interested or if you have any questions. Thanks
IMPORTANT NOTE: To reply via e-mail, change the ".ten" to ".net"

Huh?? You mean we have to ask you for proof, then wait for you to offer it, then ask again? I sense a never ending cycle here.

Face the music moron. You have lost. You have no friends, no hope, no reason for living. You call the suicide prevention line and they put you on hold. You call the fire department and they send you a match. You call your mother and she disguises her voice and says "She no longer lives here - stop calling!" You are a loser. Utter and complete. I will always be a winner. You will always be a loser. It is your destiny. It is the order of things. It is the way of the world as we know it.

Accept it and move on. For the betterment of all.

Look up the Science Workshop (Bethpage,NY) on the Web
or see their ads in various Electronic magazines.
They sell a kit called the "Poor Mans' sprectrum analyzer".
It uses a TV tuner module..the tuning voltage is swept with a ramp
generator, this voltage is also used to drive the Horizontal on your
scope. The output of the TV tuner drives the Vertical.

Cheers, Hugh Duff VA3TO

Depends what your priorities are. I think you'd gain aircraft(not sure if Sportcat has it or not), 400 channels, some small coverage gains around UHF and 800Mhz. The ability to computer program the 400 channels could be valuable (like having several banks of 400 on disk & putting them in in a few minutes for different situations). It's a better scanner for crowded city situations because of the triple conversion. If you can find one at RS for $100-130 (whatever it runs now....), it's a great buy - but only if it does something useful your Sportcat won't do....

Neutrodyne

2203. Why the gaps ?

Newsgroup: rec.radio.scanner
Date: 1998-06-18 00:00:00 UTC
From: "Kent W. Smith" <kents@nortel.com>
Message-ID: <35890D37.7E37@nortel.com>
Source record: 156576

It seems that most consumer grade scanners always have gaps in
frequency coverage;

55 - 107 mhz
175 - 224
513 - 805

Are these freqs just costly to implement on a scanner?
Are these freqs used for something we're not supposed to hear?
Are these freqs modulated in some way other than AM/NFM/WFM?

I know that ICOM and others can cover these freqs, but Uniden/RS
models always seem to leave them out. Is there any value in tuning
these freqs for the average scanning enthusiast?

Just curious & learning ...
Kent

Bobby;

Just happened to see one this morning in an Electronix Express catalog. The specifications look good to me - .4M to 250M or 1G range, 250kHz BW, $910. Call them at 800-972-2225 & ax for a catalog.

Don,
Niceville

2210. FAQ: New Scanner Users

To All New Scanner Users,
If you are new to the radio monitoring hobby, I have compiled
a FAQ containing a collection of topics which are frequently
asked on the radio newsgroups.

Topics include :
Look Before You Post
Don't Ask What The Best Scanner Is
Picking A Scanner/Receiver
Scanner Glossary
Scanner Model FAQ
Scanner Dealers FAQ
Frequently Asked Frequencies
FCC Frequency Databases
CTCSS & DCS
What's Illegal
Cellular-capable Scanners
Trunked Radio Systems
Co-ax Cable
Receiver Range
Your Scanner On A Plane
Frequency Counters
Magazines & Newsletters
Rechargeable Battery Tips
*Radio Discussion Lists
*Radio Modifications
*Radio Shack On-line Manuals
*Handheld Scanner Antenna Review
*Used Scanner Price Guide
My Web Page

Yea, it had different headers for the ISP & posting host so there
is no way it could be me. If you were honest & knew what you
were talking about, this would not be happening now!

> + 29 voice = 30 channels/bank -- the 2050 has 300 channels in 10 banks of
> 30).

There is a way around it, depending on how and where each system is set up. For example, when I lived in Phoenix, I monitored 4 trunked systems in that area. Two were receiveable on the west side, two on the east side, with 10 frequencies each. I put 1 east and 1 west side system in the same bank (Glendale and Chandler, for example) Then, when I was in Glendale, it would lock onto Glendale. In Chandler, it locked on to Chandler, and so on. Just store the ID's in diffent banks (A - Glendale, B- Chandler) and you're all set, leaving 30 extra channels free for programming. One word of caution: Both systems must be the same type, or you'll end up having to set the fleet map each time.

You can also lock out all the trunk channels in conventional mode so you can use the extra channels for conventional listening. Tempe, AZ for example, uses Phoenix Fire, which is conventional VHF. So I put those freq's in the same bank as the trunked channels, and locked all the trunked ones out. To listen to PD, I would enter trunk mode, which doesn't care about frequency lockouts, and to listen to fire, I'd scan the same bank conventionally.

Bill,
What about hooking up some kind of preamp prior to the splitter? Could that help, or would it just foul up the works even more?

Incidentally, I have another example of mountains funelling radio signals. I live in the Antelope Valley, just outside of Edwards AFB. I have a mag-mount antenna up on the roof of my house which is slightly angled towards the south. Here's the funny part - I can receive LAPD stronger and clearer than our own Kern County sheriffs repeater in town. The location of the antenna also seems to hinder reception of LA County sheriff in Lancaster which is 15 miles southeast of me, yet I can receive Santa Clarita, San Dimas, Malibu and East L.A. dispatch channels clear as a bell. Some of these repeaters are more than 50 miles away. Bizarre.

Fine... here we go..

Request proof of your dredentials (posted publically) of any and all degrees, schools/institutions obtained from, certificates, etc. All these to be posted publically with NO EXCUSES (like, I didn't get the message, or its available at..., or, I don't have to). Since others have already done so, the Burden of proof now lays on you.

Mind you, anything you post will be scrutinized closely and many questions will be asked of the various institutions that you may claim (in other words, your credibility on these items will be checked very closely).

Good luck, John (you are going to need it).

No, I understand experimentation. Unlike you I am a REAL software developer. Now if that's the real reason (which we all know is a lie, but just for argument's sake) how does calling yourself "John MacKey - KAOSSF" change anything when the spambots can still feast upon "kaossf@parg.org"? Oops, another hole in the H.M.S. Mackey.

What I DON'T understand is why you continue to use this sorry pathetic excuse of a story when myself and others have pointed out holes in it large enough for Air Force One to do loop-the-loops in. Can't you just admit the truth? You were using it to pretend that someone else was forging posts and to bypass Bill Cheek's killfile. We all know it!

> Are these freqs modulated in some way other than AM/NFM/WFM?

54-108 MHz is largely the VHF-Lo TV and FM Broadcast band;
not of widespread interest to the casual cop & robber
scannist. 72-76 MHz is a utility and repeater band that
is interesting sometimes. But it's not widely used
and isn't worth the cost to the mfgrs to include it.

Likewise, the 174-216 MHz range is the VHF-Hi TV
band. Military aviation is allocated 225-400 MHzm
but that crossover band from VHF to UHF is costlier
to implement, so mfgrs don't just give it away.

470-806 MHz is the UHF TV band, except for 512-520 MHz,
which is an expansion band for UHF land mobile,
but it's not used except in the larger cities like
Los Angeles. I don't have a good explanation for why
the cutoff is 512 MHz, but apparently 8 MHz more costs
something that the mfgrs won't give away. The rest
of the band to 806 MHz is UHF TV, so most scannists
don't want to pay for that.

Personally, I like to have FULL coverage because those
broadcast bands make excellent "hiding places" for
low power bugs and clandestine radio operations that
the public just can't get to.

Look at the UHF TV band that's largely vacant, even
in large cities. What a wonderful place for a militia,

cops, robbers, and spies to hang their radios. For that
matter, you can tuck a little bug in betwixt a couple
of UHF TV channels and who'd ever think to look for
it there. In some cases, you can even pack a weak
transmitter in betwixt the video and audio of a TV
channel and no one would ever be the wiser...especially
the authorities. Unless you're right on top of it,
it would never be detectable anyway.....

> I know that ICOM and others can cover these freqs, but Uniden/RS
> models always seem to leave them out. Is there any value in tuning
> these freqs for the average scanning enthusiast?

As alluded above....there *could* be some value in the
ability to tune those frequencies. The average scannist
would not derive that value, but the compleat one might.

I have a mint Realistic Pro 2006 (in box) which has a nice bright
display (the backlight is rarely turned on), cell mod, speed mod, and
the following add ons:

Installed Opto 456 (full dfmf and pl decode)
Programmit Interface (installed and mounted on top
of unit)
Discriminator tap and mini plug output on the back
of unit.
Probe 4.0 Software (the best and fastest)

This unit works perfectly an can scan with Probe upwards of 80 cps.
Plugged in to your computers sound card it can do everything to decode
posag to provide great sound through your computer speakers. It really
is an incredible setup. I purchased it off this group about 2 months
ago and it has worked beautifully. The only reason I'm selling it is
because I picked up an R9000 very cheap.

I'll take the best offer over $500 by Sunday 6/21/98 (fathers day) It
would be a great fathers day gift.

> Bizarre.

Indeed. And it gets even more bizarre when you
fool around with preamps. I won't argue the
merits of a well-designed, narrow-band preamp
where noise can be minimized, gain maximized,
3rd order intercepts, and 1-dB compression
points be controlled. Preamps like these have
been doing their duty for years. Old hat.

But a preamp for 25-1300 MHz or wider? Which
is what the scannist needs, right? Well, in
this case, such preamps usually flatten the
dynamic range of the receiver at BEST. Worse,
they can increase the noise floor and susceptibility
to intermod, densense, and strong signal overload.

Some guys claim success and want to argue the
point. I don't. If you find a preamp that digs
signals outa the noise at 30 MHz, 300 MHz, and
300 MHz, then you've got a potential winner. In
which case, yes, insertion and splitting losses
certainly can be overcome. Just that I've never
seen it and I've tested some of the best. Sure,
there are instances where the preamp digs that

signal outa the noise.

And so you leave the sucker on, full time. And after a while, you pat yourself on the back for being able to hear so many signals from everywhere.....and a year or more might go by. You're happy.

Until one day you pick up a signal that you KNOW doesn't belong there. Might be 154 MHz popping in on 450 or something. And then you have to wonder just how much had you heard that was bogus. Tests will show a lot!

So okay, you get smart, and turn the preamp off. Except when needed. That's Phase 2. You'll learn it's not needed all that much. You'll also wonder where went some bona fide signals that you used to hear.

Phase three is when you discover the insertion loss of the preamp when it's not turned on. So you take it out of line and lay it on the bench. Finally put it in a drawer. Finally forget about it and discover it three years later, having forgotten why you put it there in the first place.

It's a never ending story. Preamps have a very limited value to scannists, but the most valuable ones are narrow banders for specific purposes....like satellite monitoring; ham DX work, EME, stuff like that.

Still, you'll run into a few guys who claim their wide-banders work. So jot down the data; go buy one or two; and go through the learning phase, too. I did. Lots of others did. You may as well, too.

Of course, if you find one that really works, please let me know. I haven't gone through this phase for several years, so it's about time again. Hell, I take a bite of cole slaw and a drink of buttermilk every few years to remind myself the stuff tastes like moldered vomit. The preamp thing is kind of like that.

> <grin>

I listen to 450-512 Mhz almost exclusively, so a preamp in that range might be a good idea...I might try it. However if one wanted to pinch their pennies (no easy task in this hobby) and still enjoy enhanced reception, they could plop a magmount scanner antenna on top of the ol' swamp cooler for each scanner they have. Cheap, easy, and you won't hear the landlord or H.O.A. bitching about it, cause they won't even notice! You could even buy antennas tuned to different bands and use one scanner for VHF and another for UHF or 800Mhz, etc.

Frankly, I prefer the FORMAT C: It's more thorough.
But hey, feel free. I don't have patents on ON/OFF
switches or commandlines. :-)

> This one's going into my archives.

I probably stole it myself from some other sage forum.

> Right next to another personal favorite Cheek
> missive: "seething and steaming, blowing snot-bubbles as big as
> basketballs". I've already wormed that one into conversation a couple
> of times. Hasn't failed to slay 'em yet.

Now that one is pretty much mine. Not completely,
though. My son played high school football where
that had an expression for laying some guy out...
"Man, I snotbubbled that dude...."....

I added to it with recollections of having raised
five kids, and when they were little and got
crabby or whiny and wanted to snivel over how their
rights were trampled, I'd note the monstrous snot
bubbles they'd blow right in the middle of an
extended moan or whine.

But yes, used with discretion, kind of like a bluff at poker, the snot-bubble accusation is a slayer. It has a way of drawing even the non-posters outa the woodwork to take one side or another. And the victim; oh the victim, your poor victim NEVER forgets YOU.

After all, chances are ... you REALLY DID catch him with a snot bubble rolling around on the end of his schnoz, which pisses him off immensely that somehow, you KNEW. And even if he didn't have one, it chaps his hide that you THINK he did. Either way, you win.

> Way to play the craft. Thanks.

Yes. It really is better when everyone plays at a higher level. Nothing's worse than having to settle for a joust with a rank amateur. THEY take it too seriously and start blowing real snotbubbles which then burst and splatter all over Kingdom Come and you have to quit what you're doing and go take a shower. <Gack>

> (If you steal from me; you've stolen TWICE!)

In all liklihood, you're a thief three or more times over, then. I'm more of an innovator than an inventor. I take things; hack 'em up; make 'em a little better and then pass 'em on.

So steal away! Anything to elevate the ante and the stakes a little.

<g>

Thanx for the insightful reply.

My RS Police Call book (1998) indicates a couple of things that seem to be relavent to your answer. With HDTV coming, the spectrum for what is currently used as analog TV will be re-allocated. In addition, the standard frequency spacing is slated to shrink as well.

q: Will this render todays scanner obsolete in 2005?

Kent

I have two of these. One was personally purchased and one was received as a gift. I am selling my originally purchased unit (used perhaps 2 hours) from Universal Radio (5/26/98), original receipt for $349.95 plus shipping will be included. I missed Universal's 14-Day return policy and now my loss is someone's gain since I can't use two identical scanners. This is an impressive scanner and it comes complete as packaged from Sony with the CD-ROM and computer interface.

Will sell for $265 plus $6 shipping and insurance via UPS. Money order preferred.

Please email or call: Peter at 540-669-7907. Some specs below. For a complete run-down on this scanner, you might wish to check Rich Wells' comprehensive review at...

http://www.qsl.net/n2mca/RADIO.HTM

Range 25 - 1300MHz(less cellular)
Channels 300
Banks 10
Modes AM, FM & WFM
Priority 1 channel
Conversion Triple
Scan 25 channels/second
Search 25 steps/second
Audio 150mW
Power 4 AA 6V DC
Size 2.5"(W) x 7"(H) x 1.75"(D)
Weight 8.9 oz
Interfaces BNC, DC, speaker, PC serial
Accessories Antenna, belt clip, freq guide, earphone, AC adapter.
The PC version adds a serial cable & CD-ROM with Percon DB
Features Service search, band search, VFO, adjustable step and receive mode, search skip, backlight

John "I'm such a lame and pathetis little liar" Mackey-KA0SSF tried to
make us suffer another one of his prozac induced delusions:

> Wrong! You tried to minimize the articles I wrote!

Ah, Toilet Boy, you lose the truth again. You slapped together ONE
report of someone else doing something and then rehashed it for a second
location. The ARRL had to rewrite your drivel into decent English.

> TRUE! I still say (along with MANY others who have technical
> knowledge) that WD-40 is NOT for cleaning variable pots like
> YOU claim!

Then you denounce the technical expertise of Roy LeWallen who has openly
endorsed the usage of WD-40 in electronic applications, more precisely
cleaning potentiometers. Ignorant and inexperienced wannabes like
yourself always make such stupid noises.

> > claimed to have a Masters Degree. I proved him a liar there,
> > too.
>
> No you did not! If you insist you did, then re-post your
> proof that I DO NOT have a masters degree or be proven to be
> the liar & manipulator that you are!

You made the claim of a degree. I said you were a liar and asked for
proof. You never have provided proof of your degrees. In the absence
of proof, you are a liar and do not have the degrees you claim. The
only way for you to prove yourself on this point and prove me wrong
is to provide the name of the school and the year the degree was
conferred. But, you can't. Ergo, you are a liar and a fraud.

> > Most recently, he claims his little antics with his headers are for the
> > benefit of mankind because he is testing spam proof email software. I
> > proved him a liar there as well.
>
> Really! How did you prove me wrong! You have NEVER made ANY
> statement to prove ANYTHING like this!

If you are really trying to write software like you claim, post samples
of the source code. If you do not provide proof, you are a liar.

Source record: 156625

I bought a Bearcat 101 for "parts" at a local Hamfest. When I got it home I found that when I plugged it in and turned it on lights #8 and #16 stay lit all of the time. It will not program any frequencies, but the audio and squelch appear to function normally.
I was wondering if anyone has had a similar experience with this model and could offer some advice as to what may be wrong with it. I can solder a bit, but I don't have any test equipment besides a meter.
I'd hate to trash this scanner if I don't have to. If it's not too expensive to fix, I'm game to attempt a repair job.
Thanks.

By the way, Bill, the Pro64 is susceptible to images and harmonics in the
50-54 range, and also 860-817. Don't care to believe me? Go ahead and
research it.

I've heard cellular phone calls in these bands (and no, it is not 6 meter
autopatch, because there are the usual buzzes and the high-pitched whine).

Mackey only has to flinch and these nitwits work themselves into a posting frenzy. They talk about nothing else. And none of it really seems to bother Mackey. He's got 'em wrapped around his little finger.

Someday when they collectively turn 15 they'll discover girls and go away.

Bill Cheek, your postings suck, your publications suck, you suck. The radio world does not need you. Go away.

Oh, so now we add software developer to the list of John Mackey's dubious accomplishments? Gimme a break. You couldn't program your way out of bed with a road map.

If you really are a programmer, then prove it butt-head. What language are you using? How many lines of code? What is your program going to do?

You forget bozo, unlike you, I really AM a software developer. I have been writing computer programs since age 11. I guarantee I could program circles around anything you could possibly dream of writing. Don't believe me? Then try me. Gimme a challenge. I dare ya, you sissy!

Forgot? I *accomodate* those people. I politely point them at their filters and request that they add my handle to their list.

Then I stick to my handle. (Just a little consideration for those who do not wish to expose themselves to Mackey Wackfest.)

Of course I'm not conducting experiments in header changes "for the good of all people someday".

Uh Ooh! I think I see that Herculean Zit coming back on your mug! Oh damn, here it comes!:

REPOST!

I know it's not my turn yet,....I simply can't stop now.

Okay, let's get this straight:

Everybody's grumpy in the tree-house except Mackey, because..well...he's being
Mackey!

1) The 'DOKTOR' reaches over and firmly, but gently "Whacks" Mackey about
changing his message header in tiny ways to worm past filters erected to keep
him out.

2) Mackey rubs the back of his head and squawks "THAT'S A BOLD FACED LIE!".

3) Whereupon Richard Kendrick immediately produces two different headers

(case change of the letter "k") from a couple of fresh Mackey missives.

(sssssssssssssWHHAAAACKKK!!!) Big group giggle. My ears are ringing, but
I'm still giggling.

4) Then Phil Smalley (still giggling) asks "I'm going to regret asking, (giggle-giggle) but if you didn't change the header to bypass killfiles then

what's the real reason Mr. "MacKey"?? (giggle) Name change or something?
(hoo-ho) This oughtta be good.
(giggle) Do tell.

5) And Mackey, not even attempting to deny the changed headers, starts
playing philanthropists and actually claims to be experimenting "for the
good
of all people someday!" with his own prototypes of "next generation of
tools
for e-mail."!!!

BawHAAhaHAAAAWHAHA! Whooooohoo! Mackey the Scientist! Are you a
"Secret
Agent" too? Oh..hold it, ...you couldn't tell me if you were!...Right?
RIGHT?

Aw jeez. You're friggin' unbelievable Mackey. Oh, Richard and Phil,
fantastic follow through, first rate work. Sorry about the liberties I
took
on your text Phil, but that's what I heard when I read it. Maybe I
projected
my own glee into it.

As for you loony boy:

I can already hear ya squawkin'
"IsupposeyouhavesomePROOFofyour..nyanya.."

I copied the whole thread into my most treasured archive. If you insist
on
proof I can post.......

Naaw, screw that. I'm gonna post it now. And you're gonna see it again
Mackey; kinda like a Herculean Zit that returns again and again to plant
its
puss-filled mass on whatever unscarred skin you've got left on your face.

Roast in sweat.

You friggin' loon.

Poor ol' Smacksie has a rare disorder called
eye-rectitis......where his optic nerves
got crossed up with his rectal nerves and
gave 'im a shitty outlook.

The poor fellow is loaded down with handicaps
and maladies. You can't expect 'im to be
civil and sociable.

Just look at the unfortunate sap's eyelids, fer
Pete's Sake. Where most of us drink coffee
or take NoDoze to stay awake, Smacksie has
to take Viagra.

Actually, I feel sorry for the poor wretch.

For 30 feet RG8 wouldn't be too bad. I use RG6 and RG11. For the best use Belden 9913 but I don't think you will notice much difference unless you are listening to 800mhz simplex.

Good luck,
Mike

Its going to take a LOT more than an "N" adapter to adapt an
oscilliscope to function as a spectrum analyzer. A company called
"Scientific Workshop", distributes a kit which is based on a TV tuner
that will allow you to use an oscilliscope as a spectrum analyzer.

An oscilliscope operates in the "time domain" and a spectrum analyzer
operates in the "frequency domain".

Guess what dirtbag? I don't believe you. I believe you change
little things in your header to worm around filters. You arn't smart
enough to construct a convincing paragraph much less a decent piece of
software.

You're a loser. EVERYONE ON THIS NG KNOWS IT!

You may be the only that doesn't.

You friggin' loon.

There is no way I can improve on Bill Conduit's
reply to your above post. He says it all. I hope
you followed it, word for word. The "Etc. Guy's"
prose goes into great depth, but the meaning is
there. Let me, however, simplify......

There is no "shame" on this or any newsgroup.
This newsgroup does not need to be "cleaned up".

If there is "shame", then you are a part of it.
If the NG needs a good cleaning, you will be
cleaned right along with it.

The Etc. Guy was right. You want control. But
once you have it (or someone else gets it) you
(they) will err. This is evidenced by the undeniable
fact that YOU ALREADY HAD CONTROL....and lost it.

Self control.

You can control your own computer, you know, and
in that control, you wield the power of the Universe.
You can, in a heartbeat, SNUFF anyone, any subject,
or any string of words.....to utter oblivion.

You already possess that power.

There is no shame, even from the Idiot. The only shame is your choice to create it. You can discreate it, too. There are a hundred ways you can paste the Idiot up side the chops and send him whining and sniveling outa here. Do it. Do it in the way that suits your fondest desired.

The NG does not need a cleaning, but if you want it cleaned, you and you alone can do it in the twinkling of an eye. And there's not a wretched thing I or anyone else can do about it. YOU already possess the power and the force. So use it.

Or not, according to pure choice. Your choice.

Don't make it incumbent on others to clean it for you. They might clean you, too.

Read up on good ol' Shakespeare. He said of REAL LIFE that "all the world's a stage, and we are the actors upon it".

IF there is ANY semblance of pertinence and truth there, even 1%, then it's a Cosmic Truth for VIRTUAL LIFE like here on the newsgroups. This is not reality, man. It is a virtual forum...an intangible nothingness that we create in the figments of our minds...and we certainly ARE actors here.

The IDIOT chooses to be a villain. So what? You apparently choose to be a messiah or perhaps a high-brow or a hero. Okay. Another chooses a stiff upper lip. Another chooses the humorist. Some snivel, whine, and cry. Some are 1-way...they read and never post. Others post and never read. Some read and post, but never reply or get personal.

Just try to understand that if this newsgroup is "cleaned up", it will cease to exist. To see what I mean...try it for yourself. Turn your computer OFF.

There! That did it. Poof!

Or go onto a DOS prompt, and type: FORMAT C:

There. See? Poof! You do posses the power.....
so stop trying to delegate and assign your own personal responsibilities to others. I'm sure if they check their birth certificates, they will not see any stipulation to live up to your standards.

Get a grip on that. And then exercise your freedom of choice by reading what you WANT to read and don't read what you DON'T WANT to read.

It is that simple. And in that manner, YOU can clean
up the newsgroup and surgically excise ALL shame,
and all fruitcakes, and all idiots. Once and for all.

Now read one more time what the Etc. Guy had to say
to you. He wasn't attacking you. He only held up
a mirror up for you.

This is good advice, but try to get a preamp with an FM trap & test it well
while you can still lower it & move the amp to the bottom if strong TV or radio
broadcast signals cause intermod and images. I live "in the country" but I'm
within 5 miles of 2 UHF 5 million watt TV transmitters & a 50,000 watt FM
broadcaster. It takes a lot of experimenting to use a preamp on anything here,
so do your homework on what is nearby and plan accordingly. I went through
several "bad" amps when I first moved here, before I figured out why I was
```

getting channel 15 at 26 places on the TV dial & all over the scanner!

Copyrighted (c) 1998 Bill Cheek <All rights reserved>

True that lower frequencies propagate farther than
higher freqs. This is because the attenuation rate
of a radio wave is proportional to not only distance,
but also frequency.

Still, 75-80 miles range for VHF-Lo strongly suggests
something else is in the equation, probably YOUR
location. Line of sight still applies, though less
so on VHF than UHF, but it is still a predominant
factor for reception. A combination of your location;
the height of the antenna above ground, and the
quality of your antenna and coax cable are certainly
major role players in your success.

If, somehow, you are getting a space-wave from these
CHP sites, then a measly 3 dB loss in a splitter just
won't make a difference. So long as you have 10-20 dB
of Signal + Noise to Noise ratio, you'll have full
quieting...which means anywhere from 0.75 to 2 microvolts
is all the signal you need. You could be near the edge
of hearing and not hearing, and never know it because
a fully quieted signal "seems" like it comes from next
door. The ear cannot discern distance of the majority
of FM signals.

Brass tacks.....you hook up a Y-gate to a garden hose
to perceive what I mean.....that a splitter causes
the unit signal to divide, 50% one way and 50% the other.

The logarithm of 0.5 or 1/2 is -0.301. Converting to decibels, dB = 10 Log (Ratio) = 10 Log (.5) = 3.01 dB, a whopping loss for weak signals; and yet an inconsequential loss for stronger signals.

In review, your particular circumstances do not make a case for using one antenna to feed multiple scanners. You just have something else going for you that seems to defy the obvious losses.

Any radio link, whether it's Points A and B on the ground, or Ground A and Aero B, or Aero A and Aero B or earth-to-satellite and satellite-to-earth, or even earth-to-deep space, etc, can be accurately and reliably modeled with a fairly simple equation. It consists of gains and losses, each readily analyzed and calculated. It is not magic.

I say this....because at times there does seem to be magic thrown into the equation. Ducting, for example, whether via the troposphere or conveniently shaped land masses, can apparently throw a "magic factor" into the link equation. Valleys, for instance, can duct a radio wave far beyond what the standard link equation suggests. This isn't magic, though, because when all the data are known, the equation proves up. Add geo-mass to the possibilities for success at your site.

I am reminded of an interesting discovery of the behavior of radio signals made up on the North Slope of Alaska many years ago. Seems a microwave site was needed between Prodrome Bay and Valley. No problem. A series of repeaters, point-to-point, as is done everywhere else, would be the design goal.

Catch-22 was a certain rugged mountain in the middle of one desired path. To go around the mountain meant several more repeater sites and massively higher costs, or.....go over the mountain with one link. A passive repeater was determined to be feasible and cheap since the mountain peak was inaccessible for routine and normal maintenance. A passive repeater is like a large billboard placed in a key position to reflect radio waves arriving from one angle into a shadow zone farther down the link. They're cheap...require little maintenance....and they work.

So some siting studies were set up with a transmitter at "A" on one side of the mountain and a receiver at "B" on the other side. No way A could talk to B, right? Well, while the teams were waiting for helicopters to bring the passive repeater in, they fired up their sites for

fine tuning, aiming, and such.....and LO! Site B
heard Site A ..... LOUD AND CLEAR.

Impossible! But there it was. No fades, either. This
oddity brought in the theoretical engineers by the droves.
The first thing some bright fellow observed was the
craggy, sharp peak of the mountain. No rounded surfaces.
No erosion. Just sharp, stark edges, and in the path,
it was even like a KNIFE EDGE. Sharp! Clean. Smooth.

Knife edge? Yaaaahoooooo! The answer was simple.
Physicists have long known of the knife-edge diffraction
phenomenon with respect to LIGHT. Seems light BENDS or
diffracts across a "knife edge" with MUCH LESS LOSS than
across a comparable, but rounded surface. Another bright
mind recalled that light waves are radio waves, so was
that mountain actually diffracting the signal down into
the valley on the far side? Yes! Mystery solved. No
devil or magic at work there.

To the best of my knowledge, they never did stick that
passive repeater in there. They just aimed the dishes at
the sharp edge of the peak and let it go at that.

The moral here is that there's more to things than what
meets the eye. Clearly, you can't broadcast most radio
signals at a mountain and expect superb reception on the
other side.

And the final conclusion here is that the casual scannist
should not be encouraged by your unique success and try
to run two or more scanners from one antenna. And even
in your case, with that resident 3-dB loss, there are
signals out there that YOU are missing. So long as you
don't care about them, well and good. But if you want
to hear them, there is no recourse but to remove the
splitter and go "direct".

<shrug> It's a matter of physics. I just dare you
to stick a Y-adapter on a garden hose and still get 100%
of the normal flow out each leg. You do THAT and I'll
concede that you and David Copperfield have something
in common....and then wonder how's come you're not in
show business.

heh heh heh.....

> I connect the ground wire to that copper pipe.

As long as that copper pipe goes on more than just a couple feet outside the house to connect to a plastic pipe, that's what I'd ground to. You should use copper wire -- heavy wire, or heavy braid if you can find a good electronics house -- to connect to it. Connecting copper to aluminum directly is asking for trouble.

Oh, and be sure you aren't grounding to a gas line or a hot-water pipe, unless you want to make the 6:00 news... :-)

Hi ya Smacksie. How ya doing, peckerwood?
Ready to go sailing again? Wait, listen....

It occurs to me to tell you about *my*
"spam filters" and otherwise fondly known as
my Shit List. The one that you and your goooood
buddies live on most of the time. Yes, I want
to tell you about MY Shit List and how good
it has become.....but first, I want to comment
on yours.

You're a tuna-lick. A friggin tunalick. Oh,
you don't know what a tunalick is? I coined
the word to avoid doing injustice to the world's
lunatics. It's not fair to them to call you
a mere lunatic. Most lunatics don't know
they're lunatics, see. But you know. You
know good and well what you are. You're a
flippin, freakin, friggin tunalick......

Which is all the more evident with this ignorant
claim that you're working on "spam filters for
the benefit of Mankind". What an idiot.....

Well, it was several months ago that you
unknowingly found a way to get past my Shit List,
and that only served to make me more determined
to lock you out. Now you CAN'T get in anymore.

Not only can I lock you out by name, call sign,
e-mail address, and by subject lines, I can also
stuff your zitface even farther down the list
and filter out your ISP, and any element of the
PATH that your ISP uses to send news out. I can
also filter by expressions, euphamisms, message
ID's, and general content..... and I haven't even
told you my secrets, tunalick....just the ordinary
stuff.

In other words, Smacksie m'boy, I'm fixing to
plant another Size 13EE crosswise on your
sorry patooty. And there ain't a damn thing you

can do about it. Remember the movie, BILLY JACK? Remember where he told Pozner he was going to kick him upside the left ear and there wasn't a damn thing he could do about it? Well, it's like that. exactly like that.

I ain't even gonna know you exist anymore. SNUFF! Whack! Bap! You're fixing to get flushed along with you-know-what-else. And there ain't a thing you can do about it.....except maybe PRETEND here in public that it doesn't faze you. Ha ha ha ha.

But I did want to tell you that you're a sorry lout for not taking me up on the deal I offered you recently. You know, the one where we don't talk to each other, we don't talk about each other; we don't even THINK about each other? Why you couldn't agree to that is beyond me.

But, you showed your colors on that one, you friggin tunalick. It's now impossible to find the words to accurately express what I think of and about you. I mean the words don't exist. I could say you're lower than whale shit, but that does injustice to whales and their droppings. You are lower, though, but words do not exist to convey the degree of lower....

Anyway, it doesn't matter. I'm fixing to TEACH you a good lesson on filtering and Shit Lists. And I'd like to see you penetrate this one. In effect, I'm hosing you down and then jamming you down the "john" where you belong. And in the process, I expect others will learn how to do that to you, as well.

So in effect, you may yet make your contribution to humanity by instigating the drive for knowledge of how to use Shit Lists, Twit Filters, and Kill-Files to stick you where you belong. You're a natural-born loser, you friggin tunalick. So I am done with you and the likes of you, including all your aka's, fakes, bogusus, and tomfoolery.

Now with no further hesitation or ado, here is what I want you to do......

Turn around; bend over; and grab your ankles. Don't bend your knees, either. Keep the legs straight.

Hupppppp! I said LEGS STRAIGHT, lad!

There.....that's a good boy....good, very good.

Hold the position.

Now then.......

<as Size #13EE lands crosswise>

......KAAAAA-BLAAAAAAAAAAAAAAAP! <whoosh>

<wiping sweat off brow as Smacksie once again
goes majestically sailing through the air with

If I already have an SC150 (Bearcat), is it worth byeing a Pro-64,
despite the extra features?

Well, this might be risky, but I was able to find a few undiscovered commands for the BC895 by writing a simple little program that sent it every possible extrapulation of a known command. For example, KEY01 activates the manual key, so I had the program try each possible variation of the KEY command (KEY00 to KEY99) and then watched to see what happened. You might be able do the same on the Icom commands (I haven't seen them, so I don't know). However, as you mentioned, you run the risk of sending it bad data which could corrupt the EEPROM's. If that happened, I'd just send it back to Icom and play dumb: "I dunno... it just quit working..." Seems to me that it isn't designed very well if you can corrupt the damn thing by just goofing around..

If you try it, let us know what happens!

> area.

There actually is, because you can still get a) sideflash from your wire
to the scanner and computer, or b) surge via the ac lines.

You might want to do a search using Deja-News for Gary Coffman's postings
on this subject in rec.radio.amateur.antenna and rec.radio.amateur.equipment.
To paraphrase his discussion, what you want is a "ground window". This is
a single copper plate to which all your equipment is DIRECTLY grounded to
(no chaining of ground wires between equipment) and to which all of your
surge supressors -- ac, phone, coax -- are mounted on. All your ground
rods/systems must also be bonded together -- that's in NEC, and your
homowner's insurance might be invalid if they aren't. You also need
good supressors: see www.polyphaser.com -- they are expensive, but whats
$10 more than an MFJ special if it works and really will handle a direct
strike?

With this arrangement there must be no wire to the "outside world" that
doesn't go through a supressor at the copper plate -- even a single wire
will render it ineffective. Polyphaser sells a book called "The 'Grounds'
for Lightning Protection" or something like that -- they're a serious
company. (God's sake, they sell a supressor for nuclear EMP effects,
though I wonder how you are going to make a warrantee claim if it fails...)

Gary, are you lurking out there? Can you fix my errors in the above?

Eric

Did they do the unthinkable and publish any of the command set? Was it an unbiased write up that discussed the current dissatisfaction many users of the PCR-1000 have with Icom right now? QST is a hard find in Canada but if it covers these subjects off I wouldn't have a problem tracking it down. As I am curious to find out what Icom is willing to say to their customers. My PCR has been great, no problems but their stance really goes against what you would expect from a communications receiver manufacturer these days in supporting their product.
Thanks.

Thanks for the input, guys. My friend won't be keeping his equipment
hooked-up to the antenna when he's not around, but I suggested to him
that we figure out how to redirect a strike's energy to the ground
without destroying his (huge) shed. I'll keep my ears open for the
coax question. I appreciate the speedy replies.

Bobo,you really ARE as clueless as you appear. First, anyone can tell who really made that forgery. (anyone but you) and in fact the original text is "you" anyway, so it really only amonts to a reposting.
Secondly, the people here are only interested in seeing you and your entourage disappear into the sunset, they couldn`t give a tinker`s damn if you`re right or not. (for any of you with a perverse curiosity Bass is never right except in his tiny mind. A quick perusal of Dejanews using his name an nazi, jewish, gay, aids, irish, child molester, placenta and so forth will keep you entertained for hours on end)

In the last you`re about to end your days terrorising people on usenet, Bobo.

Larry

2340. ***TRADE: SEVERAL RCVRS+SCANNER 4 SW RECIVER***

Newsgroup: rec.radio.scanner
Date: 1998-06-18 00:00:00 UTC
From: teenham@aol.com
Message-ID: <1998061802442700.WAA08763@ladder03.news.aol.com>
Source record: 156729

Hello there...

I have the following equipment I would like to either sell, or trade for a digital readout shortwave reciever with SSB such as the RS DX-390 or something of that type.

Radio Shack PRO-2009 Base Scanner. VHF/UHF Direct Entry Programmable Scanner. 10 channel memory, Digital PLL Frequency Readout, Search feature, Freq Coverage: 30-50 MHz, 144-174, 410-512 MHz. Made in Japan. Includes AC cord, and telescopic antenna (the manual is found online at www.radioshack.com). Works fine, good condition. Catalog Number 20-109

General Electric UHF HT. 2 Channel Capability, CG Mode (Channel Guard, like a PL Encode/Decode.) Channel one currently set to 466.437 MHz, channel two not set. Includes rechargeable NiCAD battery and UHF Rubber Duck antenna (also BNC connecter for base/mobile antennas.) GE MPI Series. Works fine, but battery needs charging.

Radio Shack Digital-Tuning 4 band AM/FM/SW Reciever DX-370. Freq Range: 530-1710 kHz, 3.2-7.3 MHz, 9.5-21.75 MHz, 87.5-107.9 MHz. Digital PLL frequency readout. SW reception is AM mode only. Low battery warning, LCD "tuned" indicator. 20 memories, 24 hour LCD quartz clock with sleep timer and alarm for waking. MINT CONDITION, no scratches WHATSOEVER. Have orginal box, packaging, and manual. Small size. Requires 4 AA batteries. Catalog number 20-211.

Motorola Spirit VHF Recievers. Two recievers, both currently set to 138.325 MHz, both include Rechargeable NiCAD batteries, and charger. Work great, very good condition.

If you have any offers, please email me. Like I previosly stated, would like to trade for a SW reciever with SSB or sell (would rather trade, though.) Or if you have anthing else of interest to trade, email me.

Thanks, 73,
Eugene D.

I see. I think the main problem is that the reviewers are not computer people. I program, develop large scale databases etc for a living and deal with computers and technology everyday. Icom had a great idea but they are radio people not computer people. It is only the last few years that integration of the two specialities has started to occur. Well at least I know I wont waste my time looking for any new information from Icom at least not if the review is that bad. Even if it isn't it sounds like no one is touching on the issues surrounding the unit.

>being talked about.

You are being elitist and
repressive. yet, it's
true.

but what you have on any NG
is that there are no rules,
really.

it's a fun place to be.

it's a place to have fun.

it's a place to learn, maybe.

it's what it is.

You cannot change what is. That
is what it is.

it's a bar-brawl and everyone for
the door or for the happenings...
it's language of the bar and the
church all into one NG...

what i object to with your post
is that you pretend that this is
the only NG where it's not nice
to fool around with your "pig-parent"
nature....your wish to be in control.

you are in control when you filter
out who you filter out...that is what
is...you decide for you and you and
what you want to be YOU. No one else
can do this.

Those who read the NG idiot do so at
their choosing. Most of us now just
filter or don't bother. It's your

choice to read. Or not. Most of us
go on clicking as we are in that mood
for.

That is what the NG offers. It's a
mood-ring kind of thing: you are in
a way one day and another way another
day...makes you day sometimes to read
the IDiot's puke.

You can pretend as Dorothy did in her
world or you can just filter it and
not be bothered by it, because there
are NG's far worse than this one....

the IDIOT is just that. Blithering.
Nothing upstairs. My guess is he is
a total geek and is still waiting for
puberty to be paid for. His mother
will loan him the money.

So what you are in angst over is stupid.

Why are you allowing the IDIOT to work
you into this "vacuumus" abyss of stupidity.

question mark.

you choose to be affected by The IDIOT. No
one does it to you. You do. You make you
write the ditty and get off on it because
it gives you recognition for being upset.

you are allowing THE IDIOT to upset you.

Why?

All you have to do is "think" and he will
not be able to keep up with that. he does
not think. That is his stupidity.

If you want to be in his league, his level,
then allow him to make you into his drone and
write about him...it gives him orgasmic release.

some of us don't allow the IDIOT to work us.

We work him. Or not. I choose not to anymore.

I made that choice.

So why not you? Why not everyone? Then
the IDIOT will cease to mean much to himself
if no one responds. But there are similar
15 to 18 year old clones of the IDIOT who

will continue their diatribe and more stupidity
just to get them heard by their mentor.

you choose or you choose....it's your statement
to go with the flow or to allow it to end.

The seriousness you give this post of yours
as to being Mackey's fault is wrong. The fault
is YOU. You are at fault.

so correct it. Be at cause. Stand up and
filter out or be silent as to anything doing
with the idiot.

Silence is the golden scream.

Silence is the eternal killer of the IDIOT.

silence is the answer.

bill conduit
etc.

Actually Icom will release the command set to you under a nondisclosure agreement provided you can prove that your use of the PCR will sell more radios! You were right on! It is like they are taking a few pages from IBM's old days and Microsoft's current views and not realizing that a useable, customizable and documented product will sell more radios than keeping everything under a nondisclosure agreement.

I have found the command sets all over the place on the net but none are complete. There have even been rumours of corrupting the EEPROM's in the unit with software commands. The 3rd party programs arent implementing the PCR-1000 100% because they too are missing the support from Icom.

> touching on the issues surrounding the unit.

The proprietary nature of the command set is only one issue. Two others
are: 1) no error correction/detection in the command set 2) no protection
for "privileged" commands that can misalign or otherwise "break" the
radio. I lied. 3 issues: 3) No "failsafe" mode to get a radio broken
because of (2) back into minimal working order. 4) no "save/restore"
facility. I could go on...

Jeez, even the most simple-minded programmer could have come up
with a packet system similar to Kermit to avoid the first problem,
and a look through a modern modem manual would've given them ideas
about the rest...

I don't know whether to be angry or depressed. I've spent big bucks
with ICOM but I cannot imagine spending more until they get a clue.

> in the ground.

Back in the bronze age when Z-80's ruled the world, the standard was
to spend 10% of the equipment cost on the lightning/surge protection.
That comes up with a $161 figure.

Your iron stake does nothing. Nothing short of an 8 ft rod is useful,
if you want a "ground rod." You might try buried radials, but unless
you're resodding the yard, I wouldn't bother. LOTS has been written
about proper ground systems, and I don't have all the knowledge necessary.
(Next good step up from the 8 ft. rod is the cold water pipe at the
entry point to the house, IF your water pipe is copper.)

Back to $161... Coax suppressor, depending on cable connector and
frequency range, from last year's price list, between $50 and $60.
The rest of the items (ac and phone protection) will exceed your
$161 limit. You might be able to use the coax suppressor with a
good consumer-grade computer suppressor, but I don't know how I'd
maintain the ground window in such a situation.

> (And when Mr. Lightning comes around I just disconnect...the
> antenna........and stick theendinamayonaisejar AND HOPE Mr. Lightning doesn't
> knock while I've got my paw on the BNC connector).

You can always watch the pretty arcs across the connector in that jar
as lightning strikes nearby.

> Can you tell me more about the NEC standard?

Too big a question to answer here. NEC = "National Electrical Code"
which determines all sorts of things about how wiring -- of all kinds --
should be done. If you're in violation, some insurance companies
won't pay out -- even if that violation had nothing to do with
whatever you're trying to deal with. Most of the time there are very
good reasons why you should stay compliant with NEC, above and beyond
that one.

It's late and I'm beat... more when I'm coherent....

The trick is to use a good quality low-noise broadband preamp before the splitters. In fact- best place is right up at the antenna so that the signal is amplified before any coax loss. The preamp will establish the noise floor and provide enough gain to compensate for the losses in the coax and splitters.

Several Burger Kings in the area have signs on the outside of
the drive-through window (like where you pay, not where you
order...)

It says "Braille and Picture Menus Available"

1.) If you need a Braille Menu, what are you doing in the drive
through?
2.) If you need a picture menu, cause you can't read the
regular menu, how exactly is it that you are going to Read the
sign to learn that a picture menu is available?
3.) Why is the sign at the "Pay" window - you know, the place
you drive to AFTER you order from the menu?

J.

Oh, and "McDonalds Coffee is Hot."

OK, folks...it's time to do some serious lobbying of the two top movers and shakers if you want to see LPFM created. Here's what must be done. In addition to your own Congressman and both US Senators, we need to educate these fellows on the merits of LPFM and why it should be allowed to be created by the FCC. These folks oversee the actions of the FCC and we need their support! When calling ask to speak to the legislative assistant (L.A.) who advises the Senator/Congressman on telecom issues. If you can't get through to the Senator/Congressman directly, this is the person you must persuade of our goal of LPFM creation. Email, call, write letters and follow up with faxes. Always be polite and courteous even if you disagree strongly with their positions when speaking or writing these folks.

SENATOR JOHN McCAIN (R-AZ):
Chairman of the Senate Committee on Commerce, Science and Transportation
As Chairman of this powerful Committee he has direct oversight of all FCC matters. It has been said that he will not support anything that the NAB opposes. We need to educate him on why Low Power FM needs to be created and what benefits it can bring to America. You need to write, fax, email and call his office and tell them you support creation of a Low Power FM service.

Here is a website with McCain's addresses and phone numbers:
http://www.capweb.net/classic/State/AZ/Member.morph?memberCode=S105AZS1

Senator John McCain
Washington Contact Information
241 Senate Russell Office Building
Washington, DC 20510-0303
Phone: (202) 224-2235
Fax: (202) 228-2862
Email: senator_mccain@mccain.senate.gov

Here is McCain's website where you can read his speeches and get a feel for what he is about.
http://www.senate.gov/~mccain/

In the US House of Representatives-

CONGRESSMAN W.J. BILLY TAUZIN (R-LA):
Congressman Tauzin serves as Chairman of the influential House Telecommunications Subcommittee in Congress, which has oversight of all FCC matters as well. His support is also necessary for LPFM to be created. You need to write, fax, email and call his office and tell them you support creation of a Low Power FM service.

Here is Tauzin's website with his contact information and some
background info.
http://www.house.gov/tauzin/
Please address your concerns to Billy at one of the addresses below.

You can E-mail by clicking http://www.house.gov/writerep/
W.J. Billy Tauzin
Washington DC Office
2183 Rayburn House Office Building
Washington, DC 20515
Phone: (202)-225-4031

Here is a good website with more info on Billy Tauzin. Check it out
before contacting his office.
http://www.capweb.net/classic/State/LA/Member.morph?memberCode=H105LA03

Representative W. J. (Billy) Tauzin
Washington Contact Information
2183 Rayburn House Office Building
Washington, DC 20515-1803
Phone: (202) 225-4031
Fax: (202) 225-0563
Email: http://www.house.gov
URL: http://www.house.gov/tauzin/

If you don't take the time to contact these people then you cannot
consider yourself a serious supporter of the LPFM movement. No excuses!
Just do it and get as many others to do it as you can. That's what you
can do to help create a LPFM service for yourself and others. Tell them
that you want to see a LPFM service created as outlined in RM-9242 or
with whatever changes you'd like to see. If you don't do this, you have
let down the LPFM movement and yourself. If we can muster enough
support, we can have LPFM...it's that simple!

Let's tell them what we want them to do before the July 24th deadline
for reply-comments at the FCC. Chairman Kennard cannot do this
alone...he needs your help!

Fightin' the fight for LPFM,

Rodger Skinner
RM-9242 Petitioner

Source record: 156760

Nathan,

Well, I would like to see the ability to, for example, send via email or pager (ironic!) the contents of particular messages to particular CAP codes. A group logging feature, i.e. grouping CAP codes toghether into one group, for example, 'Tinkertown Fire Dept.', so that when any of the CAP codes in that group come up, the name of the group is displayed. It is quite tedious to have to assign the same name to dozens of CAP codes.

Also, make it a 'quick log' feature, where you would right-click on the pager entry of interest, and a pop-up menu would show you something like 'Quick name' and 'Quick note' that would enable you to name and add notes to an entry on the fly.

Maybe you could implement the different protocols as .DLLs, so that more protocols can be added in the future as they come out, it makes things nice and modular.
You could then have pocsag.dll, flex.dll, telmi.dll, etc...

Regards,

Mike

Yeah, OK jerko, you don't care what I do, yet you expect me to only post messages that meet your approval? I read your pathetic little "deal". No way. Uh-uh. Forget it. You started this mess and I'm gonna finish it. I will not rest until you shut the hell up. I told you I was gonna wipe the floor with you and I did. And now that I'm ready to move in for the kill you have the nerve to propose a deal to ME? Ho, ho very funny. Ha ha, it is to laugh.

Here is a deal for you. Leave rec.radio.scanner and never come back. Otherwise get used to me and the others letting you have it with both barrels on a daily basis. You don't know a scanner from your own butt, you never post on topic, you lie, you forge posts, you worm around peoples kill filters and have the audacity to accuse others of doing the same. Quite simply, you don't belong here, and I have made it my personal mission in life to see to it that you leave. Period.

Besides, if you really didn't care what I did, you'd filter out my messages, Mr. "email pioneer" <gag>. Yet another case of your actions proving your words to be lies.

See ya around Mack-tard.

I think what you'e refering to is a brief period of time when electrical service in dwellings were allowed to be wired using aluminum wire. Disasterous results.

The aluminium wire RS sells is heavy gauge "Ground Wire" for use as a ground path for the antennas Harry Homeower (me) installs on the roof. They're not selling this stuff for the puposes of routinely carrying electricity.

However, I've come to learn from this group that my grounding efforts havn't been worth a hill of beans and it looks like I'll be going back up on the roof. I hate getting up there.

2377. FOR SALE: Uniden Bearcat BCT-7 Highway Patrol Scanner

Newsgroup: rec.radio.scanner
Date: 1998-06-19 00:00:00 UTC
From: lordviper@bigfoot.com
Message-ID: <358aaa79.13342224@news2.new-york.net>
Source record: 156368

This is a fully loaded scanner that covers all (legal) frequencies including 800 mhz and Aircracft. Still in the original packaging and with all the accessories.

Here is a summary:

Highway Patrol Alert
Highway Patrol Scan
Local/County Police Scan
DOT, News & Fire Scan
CB Monitor & Weather Scan
12 Bands with 800 MHz
100 User-Prog. Channels
One-Touch Band Search
AC/DC Operation
Mobile Mounting Kit

Features:

Highway Patrol Alert - Alerts you when you are within 3 miles of a highway patrol unit using a mobile extender.

12 Band Coverage - Including 800 MHz, all public service bands, "Ham" Bands, Federal and Military Land Mobile Bands plus Aircraft and Weather Channel.

100 Channels - Program to your choice of frequencies.

Turbo Scan - This lightning-fast technology enables the BCT-7 to scan and search nearly 100 channels or steps per second. The BCT-7 scans about five times faster than any standard scanner sold in the United States.

LCD Display - Nine digits LCD with back light display for night visibility.

Private Channels - With just the touch of a button you can automatically scan 25 programmed private channels.

Highway Patrol & Police Channels - Automatically scans highway patrol and police channels and your choice of 25 programmed channels.

Fire/News Channels - Automatically scans fire, emergency and news channels and your choice of 15 programmed channels.

State-By-State Scanning - Use the state key to select the two letter abbreviation for the state you are traveling in and the BCT-7 will start scanning the highway patrol frequencies

stored for that state.

WX Channels - Automatically scans all NOAA weather channels and 2 canadian coast guard channels.

Protection - Helps to advise you against all forms of speed measurement including Radar, VASCAR, Airplane, Clocking and Laser.

Lockout Channels - This feature allows you to skip channels you don't want to hear (works for PRIVATE, POLICE, FIRE/EMG, HWY, DOT, FIRE and NEWS channels).

Band Search - The BCT-7 can scan almost 30,000 frequencies and has 12 separate band search capabilities and CB channels (1-40).

Mute - Provides audio mute function when others in vehicle do not want to be disturbed.

Memory Protection - The BCT-7 comes with a memory back-up system that remembers your state selection, frequency selections and deletions

Accessories - Includes DC cord, mounting kit, cigarette lighter plug, mobile antenna, AC adapter, telescopic antenna and a Frequency Starter Guide.

This is an amazing scanner but i don't really need it. It is brand new and has never been used. Make me an offer ($100 at least) and the top one will get it. I will cover shipping!

I have seen ads in pop' comm and the like for an antenna that looks like a stovepipe. The idea is that you put it up amongst your other real pipes and soforth sticking up outta the roof and it just blends in, completely unnoticed. I never got one though, so I don't know how good they actually are, but it is a tempting idea for rental tenants like myself. The mag mount works great for me though! I can pick up LAPD from Edwards AFB, which is about 80 miles away. Comes in real handy for all those wild police chases they get. Nothing better than to watch a chase on the TV whilest listening to said chase on your scanner!

> smacks of dishonesty, even if it isn't.

Actually it doesn't. True, $20 wasn't how much it costs to SHIP it, but
the charge reads shipping and HANDLING. You gotta pay the guy who does
the handling, too. Even a scanner sitting on the shelf costs money, so
you paid a portion of Copper Electronics' lease and utilities, too. The
owner of any business has a choice: pay these costs out of his pocket or
yours. Most businesses will opt to pay them from yours.

Advice: Patronize only those businesses who don't charge you for
shipping (assuming there are any). After all, it's YOUR money, right?

Nah,

The coolest is when I'm working on a "honey-do", painting the bedroom
like a good hubby and listening to my scanner when I hear a police
dispatch to my house!!!! "See the woman, a Mrs. xxxx about a 10-xxx.

It was at that instant I wish I had memorized the 10 code for the
local police!

Turns out she had discovered some vandalism to our mailbox from the
previous night and wanted to make sure it got reported. Whewwww
wasn't anything I did.

Did it occur to you to check Mackey's record?

Allsafe's 6/86 beats the living snot out of
Mackey's 0/2471.

Besides, Allsafe's other 80 posts were directed
to or about Mackey. Give 'em a break and zero
in on Mackey. He's the CAUSE and the ROOT of
your complaint. Not Allsafe.

Check it out....check the numbers, <shrug>

Ha ha ha ha ha. Nooooooooo, I'm not exactly
"Mr." Mackey's "frend". And if you were
halfway smart, you wouldn't be, either.

I noticed that you tried to talk scanners
with Smacksie.... and I guess that was a
good try....but he won't do it. He has
no interest in scanners and scanning.

I see you are on Roadrunner, too. Cool.
It's the hottest thing going...beats the
living snot out of modems, ISDN, and even
a T1 line....several T1's for that matter.

So what part of town are you in? I'm near
the Miramar Air Station.

Here are the vital statistics of John Mackey's
home ISP where he wreaks his vengeance and
conducts his reign of terrorism. Interesting
how PARG.ORG appears to be a customer of
TELEPORT.COM, the host for our fondly missed
Peter J. Boe (PjB) of tvine@teleport.com .

For those who don't remember, good ol' Petey
conducted a long-running campaign of havoc and
terror on this newsgroup.

One wonders if there is a "connection", or if
ol' Petey Boe was just another of Mackey's
legendary aka's. Anyway, below is the pertinent
information for anyone who happens to be casually
interested:

Oh Yeah? Well feast your eyes on this big guy..waitaminute...lemme get this thingy unplugged..umph.....there:

Ya see this? It's my SCANNER. I'm holding it up in front of the screen. Can ya see it? *This* is all I had to show at the door to get into the tree house.

And as far as my credentials:

Lemme dig it out.....nope, that's not it...nope....Ah-HAH!:

Check it out!: A *genuine* receipt from RADIO SHACK!

Now,....all I had to show was my scanner to get in here.

But I brought my receipt anyways.

Just in case.

(This post is scanner related, isn't it?)

Now go back to the PARG clubhouse and tell Mackey it didn't work; allsafe just doesn't give a sh*t.

Can you guys PLEASE get a life? I'm trying to talk about scanners and all I see is flames from a couple of morons - but at least Bill Cheek tries to stick to the subject. Mackey, or whatever his real name is, seems to be the type of annoying asshole who gets his tiny rocks off screwing around and annoying everyone else. Mackey - if you don't want to discuss the group topic, GET OUT OF THE GROUP. Very simple - so simple even a dumb-ass turd like you can grasp it.

Source record: 156413

Bill that is the same deal I gave Mackey as I know you would go youy way and he can go his.
And as for Mackey wanting to restrict you from giving advice in fears that you will gain some financial benefit proves he does not want to end the flaming , he just keeps adding on conditions that have nothing to do with the subject on hand.

Mackey you need to grow up and realize that you cannot have everything your way , the deal I suggested was a good one , that you go your way and Bill goes his way.
You don't attack him or make any snide remarks and Bill will give you the same consideration.
The deal is for the two of you and no one else, but I know if you would stop your flaming the others would stop theirs as they have said so to you many times.

Now it is up to you Mackey, everyone is watching you if you reject this deal to try and add more conditions it will show you for what you are a fraud , a liar, as all you have been saying is I want the flaming to stop , now prove it , put up or shut up.

Message-ID: <358B4F1B.C3D0924E@swbell.net>
Source record: 156416

I personally use no less than 8 guage insulated copper wire as a ground wire, the reason for using insulated is it reduces the effect the weather has on the wire, when running this along the top of a roof or side of the house use some standoffs to keep the wire from touching the shingles or side of the house, this reduces the chance of the shingles or the house catching fire if the insulation melts on the wire, I also scarfed up some of radio shacks lighting arrestors, the good ones with the gas filled tube inside.

Radio Shacks aluminum ground wire is intended for tv antennas that are mounted low on the roof as that is how television shops installed the antennas 30 years ago and most low end installers still use it.

Also use an 8 to 10 foot solid copper ground rod , not the steel type that are copper clad like radio shack sells.
Copper clad ones tend to rust and there goes your ground connection as the rust build up acts as an insulator.

You can find the solid copper ground rods at your local hardware/home center or at your local electrical supply house.
They are not cheap but your house is worth more than the cost of a good ground rod.

Also don't go from one piece of equipment to the next when installing a gound to them , use a seperate wire going from each to the ground and tie them all together outside, also using a good conductive copper impregnated grease will reduce the effects of corrosion on the outside connection.
You can find this grease at a good hardware or auto supply store where they have the electrical or battery supplies.

Your ground protection is only as good as the componets you use, if you use cheap componets that is what you will have in ground protection, use better componets then you will have a good ground.

2426. HERE IS THE "DEAL" JOHN MACKEY

Newsgroup: rec.radio.scanner
Date: 1998-06-19 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <358B50D8.521D0120@pacbell.net>

Effective tonight 6/20/98 @ 0001 PST -

Here is the deal between you and Bill Cheek.

1. You don't talk to Cheek. He doesn't talk to you.
2. You don't talk about Cheek. He doesn't talk about you.
3. You don't make references or insinuations about Cheek.
Cheek doesn't make references or insinuations about you.
4. You don't even THINK about Cheek.
Cheek doesn't even THINK about you.

This is the deal, and the ONLY deal.
YOU abide it; Cheek abides it, and you both have done your
part to making the newsgroup a better forum.

Come on Mackey, show the participants of this venue you have the hair,
integrity and honor to make this work. There are no exceptions to the
above and remember you speak for NO ONE on this ng. No counter offers,
nothing - if you don't accept specifically what's outlined above, you
will get EVERYTHING you deserve from this point forward.

Just get another Nextel unit, put it in test mode, and change channels until you find the one where another base is tx'ing. Works with most digital cordless phones I've seen too, so much for 'security'.

>Then you would like the ability to receive fewer total pages and have more
>errors, in other words?

Not really. I have tried both the POCSAG DOS software with a converter and discriminator input, and Deti's Poc32, and I get about the same rate of success, as high as 97% playing with volume etc.
Today's soundcards can (like the SB AWE64 Gold) be much better A/D devices than your average slicer circuit built from the PCB that came free from a magazine.
Being able to sample data from two channels simultaneously (i.e. I can monitor two pager networks at once with Poc32, two receivers, and a soundcard in Win95), at 44 kHz through high-quality, low-noise components beats a few resistors and transistors put together with blobs of solder...

What GARBAGE you spew Bill!

I'll make you a deal, since "dmi853" asked, I'll give you another chance
right now!

WE post NO FLAMES, NO SNIDE REMARKES, NO ATTACKS, and no messages
which result in personal financial gain to the newsgroup of
rec.radio.scanner.

There it is Bill, it is THAT SIMPLE!

Show us what you are Bill, show us that YOU ARE THE MAN! Take
part in this deal and get your buddies to do it too.

Allsafe, Phil Smalley, Richard Kendrick, & the other trouble
makers this deal is for you too. Take part in this
& demonstrate your true intentions for this NG to remain
calm.

Bill, allsafe, Phil, Richard, & the rest, if you
take part in this deal you will redeem yourself to
this NG & make it a better place. I urge you to
do it. You will gain respect & I will personally
support you all in the future if others give you
any trouble!

For Sale:

Radio Shack PRO-60 handheld scanner with leather case and wall charger:
$165.00 shipping to lower 48 by UPS included

SPECIFICATIONS:
---
o Continuous coverage from 30 to 512 MHz
o Receives 800 MHz public service, police,fire band
o No cellular and not cellular modifiable
o 200 channels (10 banks of 20 channels)
o Hyperscan scans channels at 25 channels per second
o 50 frequency per second direct and limit search
o 10 independent monitor memories to store frequencies found is search mode
o selectable NFM/WFM/AM modes
o requires 6 AA or nicad batteries

This scanner is in excellent cosmetic and operational condition.
It also includes the original box and instruction book, along with optional
accessories:
1) Soft leather case
2) 9 volt wall charger (for nicads). The charger can be used to power scanner also.

Contact sparkes@fast.net if interested.
Thank you,

Probably Phil Smalley <pjsmalley@hacgate.com> said this:

>However if one wanted to pinch
>their pennies (no easy task in this hobby) and still
>enjoy enhanced reception, they could plop a magmount
>scanner antenna on top of the ol' swamp cooler for each
>scanner they have. Cheap, easy, and you won't hear
>the landlord or H.O.A. bitching about it, cause they
>won't even notice!

Good advice. Swamp coolers being so ugly anyway, no-one ever
seems to look up at them. And one that has sprung an antenna
is not likely to attract any unfavorable reviews even if
people did look at them.

Now, what would I have done if I still lived back in Ohio,
where swamp coolers are not rooftop features....

Probably lfa2@webtv.net (Lloyd Armstrong) said this:

>need help with prescott az /yavapai county freqs,
>plice, fire, s.o etc.

You might try:

http://www.azwest.net/pcsolutions/scanner.htm

http://www.qsl.net/k7on/azscan/local.htm

These might give you a good start. You could also try doing
a search at:

http://www.perconcorp.com/db_srch.htm

This page was reasonable accurate for Sierra Vista and
Cochise County frequencies, and some state frequencies as
well.

The following gear and materials are in excellent condition - except as noted.. No C.O.D's .Some help on shipping - advise zip code in reply. Prices are obo (or best offer)...

May swap (you mix and match) for an 895 Trunk Tracker, HF Rig (old or new) or SWL equipment - Will take or pay difference....

Diawa CN-101L SWR/PWR meter (15w/150w/1.5kw) - Xlnt - $70
Emco PS-12 10amp HD Power Supply - Xlnt - $25
Icom IC-PS15S Power Supply - Xlnt - $100
Oskerblock SWR-200 SWR/POWER Meter - 52/75ohn switchable - dual meters - Xlnt - $55
Kenwood SW-2100 SWR/POWER Meter - dual meters - matches TS-870 - Mint - $90
Yaesu FT 707 Tranceiver - case 7 - Radio stopped transmitting for some reason but still receives fine...I don't know whats wrong. - $175
Alfa 7705 Capacitance Meter - with case - with leads - Xlnt - $50
RS Pro 2041 - 400 chnl scanner - Xlnt - no cell - $175
RS 2032 (NETSET) - 200 chnl scanner - Xlnt - receives cell - $200
RS Pro 2039 - 200 chnl - Xlnt - no cell - $150
RS Pro 90 Trunk Tracker - Xlnt - no cell - $200
RS Pro 33 - 25 chnl - Very Good Cond. - $25

Code Study Tapes - Study Guides - Computer Study Disks
1. 8 tape set - Gorden West Radio School. 4 tapes Novice code class and 4 tech/general theory tapes. circa '83 - $20.
2. Gorden West (RS) Novice Voice Class License Preparation - consisting of two tapes and a study manual. circa '90 $15
3. W5YI - Ham Operator Computer Study Course. Covers theory and code - novice to extra - includes guide & computer disks (IBM) 3 1/2 & 5 1/4 disks. '91 $20.

Books (Antennas)
4. Transmission Line Transformers (Jerry Sevick - W2FMI) '87 - $5 SOLD
5.The Radio Amateurs VHF manual (ARRL) '72. - $4
6. The ARRL Antenna Book (ARRL) '88 - 15th edition. - $12
7. The ARRL Antenna Compendium (ARRL) vol. 1 & 3 - $9 each
8. W1FB's Antenna Notebook (Doug Demaw - W1FB) '87 - $6 SOLD
9. The Quad Antenna (Bob Haviland - W4MB) '93 - $10

Books (Amateur General Topics)
10. Standard Radio Communications manual (Radio Test Procedures and Instruments needed) '85 $14
11. Radio Communication Handbook (RSGB - Great Britain Radio Society (similar to our ARRL Handbook)) '83 - $14

12. The ARRL Operating Manual (ARRL) 3rd edition - $13 SOLD
13. The ARRL Radio Buyers Sourcebook (ARRL) '91 - $10
14. Understanding Amateur Radio (ARRL) ' 77 $5
15. Solid State Design for Amateur Radio (ARRL) 12th edition - $9
16. Hints and Kinks (ARRL) 12th edition - $5 SOLD
17. ARRL Electronics Data Book (Circuit Design) - '88 - $9
18. The ARRL Handbook '90 - $15 SOLD
19. Amateur Radio Encyclopedia (Stan Gibilisco - W1GV) '94 - $15
20. Popular Circuits Ready Reference (John Markus) '82 - $10
21. Communications Circuits Ready Reference (John Markus) '82 - $10
22. ARRL Volunteer Examiner Coordinator Manual (ARRL) - '91 - $8
23. Latest Intelligence (Codes used by Gov, Law, etc.) '90 - $12
24. QRP Notebook (Doug DeMaw W1FB) '90 $4 SOLD
25. QRP Classics (ARRL) '90 $9 SOLD

Inquiries welcomed.

You can make the cable yourself, very easily, for under $10. Go to www.interplaza.com/bensware and get the instructions along with the demos of Radio Manager and Trunk Manager software.

There is also FreeTracker, which is available at http://www.autowinnet.com/freetrack.html

There are other sources of information. Do a web search.

The West Virginia site is down right now due to some sort of systems failure.

That figures. It's the one I was looking for, as I needed a whole state.
Percon's is more up to date, but their searching is limited. I needed the
whole state, which is what the WV one has.

The Texas Big Ear Pre-Amplifier really brings in those distant
signals!
Connect it inline close to your antenna and you'll hear distant signals
like never before!

This is a fantastic pre-amp for the scanner user who wants to hear
weak, distant signals.

The Texas Big Ear Pre-Amp is only $39.95!
Regular shipping is free within the 48 US states!
To place an order, or to get more info, contact me via e-mail!

Kinda like having braille on a drive through atm. :) Anyways, I think it's to cater to blind people in the passenger's seat. The driver (who isn't blind, hopefully) probably doesn't want to sit there and read out the whole menu.

> 2.) If you need a picture menu, cause you can't read the

Again, probably the same situation as above.

> 3.) Why is the sign at the "Pay" window - you know, the place
> you drive to AFTER you order from the menu?

The speaker system can't hand you the braille menu. :)

> 1.) If you need a Braille Menu, what are you doing in the drive
> through?

And why offer it at the drive-through? If a passenger needs a Braille menu, you have to pull up to the window to get it, and if you're in a line, that will slow down the people behind you.

And anyway, is there anyone who has never been to a McDonald's or seen their ads a skazillion times? Can't these people tell 10 minutes before they get there what they're going to order? It amazes me to hear people have to THINK about what they're going to order! Sheesh!<tm>

> 2.) If you need a picture menu, cause you can't read the
> regular menu, how exactly is it that you are going to Read the
> sign to learn that a picture menu is available?

Begging the pardon, but don't the menus already have pictures? When I go to McDonald's, all the items are numbered and they have pictures. So what's the deal with a picture menu?

> 3.) Why is the sign at the "Pay" window - you know, the place
> you drive to AFTER you order from the menu?

Around here they have decided to "improve" service by having an order window, a pay window and a pick up window.

Now the separate pick up window does make sense. But I recall as a kid going to a WONDERFUL hamburger stand in Kansas City called Johnny Ringo's. You'd order, pay and pick up from the same place at the counter -- and from the (gasp) SAME PERSON!

I worked at a Kentucky Fried Chicken back in 1978 and I suggested they put in a drive-through. At the time, no one had drive-throughs, and I got laughed at and patted on the head. "No one wants to stay in their car to get food," they told me.

Effective with the July/August issue, publisher Larry Miller and editor Joe Nooney are no longer associated with National Communications (formerly National Scanning). The magazine will continue to be published. It is our understanding that it will now be produced by a commercial firm that publishes newsletters like the ones people receive with their health insurance, phone bills etc. Of course that could change depending on the decisions made by those in charge.

Larry and I enjoyed producing NatComm and we tried to make it a fun publication to read. It is now time for us to move on and do other things like the new CB Review magazine, an independent publication with no industry ties or constraints. Look for information on this new publication very soon.

Well now.....one could always say they heard it over a 46MHz frequency
allocated for use for fire, ems, etc. I had a scanner (one of those $89
jobs) that used to pick up every cordless phone call on my block on
46.50, the local fire frequency. Not that I am a lawyer, but doesn't
the laws state something about unintentional reception of
cordless/cellular signals. I can't help it if my scanner is so cheap it
picks up those signals on nearby frequencies.

Joe

2466. Improve your RS discone - cheap!

Newsgroup: rec.radio.scanner
Date: 1998-06-19 00:00:00 UTC
From: "John T. Arthur" <cc732@freenet.buffalo.edu>
Message-ID: <EustEs.4xA@freenet.buffalo.edu>
Source record: 156496

As you may have noticed, the new discone from RatShack comes with a coil and whip assembly on top for better low-band reception. You can upgrade your older discone for peanuts!

Parts to order are: coil assembly (RS p/n 11986775) for $1.99 and whip with tip (RS p/n 11986783) for $2.69, for a total of US$4.68. My local store charged me $1 for shipping.

When I ordered the items were back-ordered. It took exactly one month for them to arrive - via PRIORITY MAIL!! Cost RS a lot more than $1.00 to get the stuff to me. I recommend this enhancement. The coil and whip are of good quality.

And thanks to <tyler@nospam> for the original suggestion...

Some assembly required.
Batteries not included.
Void where prohibited.

Yes, now there is a prime example of an
application that stands a chance of great
benefit with few side effects. A GaAsFET
preamp with tuned input and tuned output
could be manna from heaven for you.

I do that, I've got several mag mounts up in the rafters,
out of sight and out of mind....especially to the
neighbors and those who think anything but a TV antenna
is the source of their interference problems.

From: "Kent W. Smith" <kents@nortel.com>
Message-ID: <358A3951.4301@nortel.com>
Source record: 156500

The volume on the weather alert is made to sound at top volume
regardless of the volume setting with the knob. It's a feature!
Short of going in under the hood with a soldering iron, there's
now way to lower it.

Glen Menendez wrote:

Right on. And there was that guy who mentioned
he has ten scanners running off a single antenna.
Sure they work. Hell, you can stick a 3" piece
of wire in the antenna jack to pull in signals.

> You mentioned my location. I do know that plays a major role in hearing
> distant low band signals as I live on a hill in the highest part of the
> city. The elevation of the city where I live is 492 feet ASL and my house
> is another 750 - 1000 feet higher than that. Also, my antennas are on a 40
> foot tower mounted on my roof.

Gawd.....no wonder! The line of sight for 1000' above
average terrain is 44-miles. Add another 15% for the
diffraction difference between light and 45 MHz, and
that's 51-mi.

Now figure from the other end....where the tower and
height above average terrain are significant, then you
are looking at an easy range of 100-mi. Other terrain
effects can easily add more to that.

> I have just today, installed a second antenna for the second scanner and
> removed the splitter. I am using RG-11 coax with F connectors and it seems
> to be working great. I haven't had time to compare how much better the new
> set-up will be, but I'm sure there will be a great improvement.

This is where S-METERs are worth their weight in gold!
No guesswork about what is better and what ain't!

> The old antenna & cable I replaced was 10 years old.

Chances are the cable was still good, but the ends
may have gotten some oxidation, corrosion, pollution,
and/or moisture that would degrade reception.

> I'm not saying you were wrong saying that a splitter would not work, just
> that in some cases it does work depending on what you are listening to and

> how strong the origional signal is. It is just a possible alternative. The
> way I look at it, if something works to your satisfaction then use it, if
> not try something else.

Right. One other factor is to know *all* the facts.
Like the 3-dB splitting loss, plus extra insertion
losses. Gawd, that one guy's 10-way splitter, at
its very best, has an inherent 10 dB loss plus
insertion losses.....PLUS return losses that arise
out of the gross impedance mismatch of 50 ohms
to five ohms. I forget right off what the loss
for a 10:1 VSWR is, but it's up there at or near
6 dB or better. So the dude has 20-dB of loss
in his system.

It certainly won't have an adverse impact on local
signals coming in at -80 dBm or better, so the
superficial conclusions can be very misleading to
those who want to hear all there is to hear.

Basically, "it works" isn't good enough of a statement
when conveying true understanding of concepts and
principles.

> Thanks for your input, I appreciate it and I'm sure others do to.

Yeah, that's my only point is understanding the nature
of the beast we're dealing with. Kriste, if all I want
to do is listen to the local NOAA broadcast, I can
stick my finger in the antenna jack of any scanner
to receive it.

But when Los Angeles, 120-miles to the north has an
earthquake or a big riot or forest fires, then it
takes every bit of know-how I can muster to get
reliable, useful reception.

So that's the angle I was coming from. Not to dissuade
those who are happy with where they're at and with
what they've got.

Hey, happiness is as good as it gets. Eh?

@cts.com
Organization: COMMtronics Engineering & World Scanner Report
Newsgroups: rec.radio.scanner

While you are off my Shit List, I will address
this, too, you sorry, degenerate reprobate:

John-Mackey-KA0SSF <KA0SSF@parg.org> wrote:

> I'll make you a deal, since "dmi853" asked, I'll give you another chance
> right now!

No, I will give YOU another chance.

> WE post NO FLAMES, NO SNIDE REMARKES, NO ATTACKS, and no messages
> which result in personal financial gain to the newsgroup of
> rec.radio.scanner.
>
> There it is Bill, it is THAT SIMPLE!

No, it is not that simple. If anyone flames ME,
I will always reserve the right to hose 'em back.
If someone makes a snide remark to me, they can
count on getting one back. If someone attacks
me, I reserve the right to attack back. YOU cannot
deal with me in respect to others. JUST you and
ME, Smacksie.... Others stand or fall on their
own merits and demerits. I don't want a deal
that restricts you from interacting with others.

THAT is for YOU and THEM to deal with; not me.
Likewise, my dealings with others are not your
concern. It's JUST thee and me, Smacksie.

And this "financial gain" bullshit is impossible to
abide. I am in the radio hobby AND the radio
business. I will NOT subject my posts to your
loose interpretations of what meets yours or
anyone else's expectations. Furthermore, if you
come up with the world's greatest doohickey, I
don't care if you announce and promote it here.

This radio hobby is 100% dependent on products
and services, and THIS forum is a good place to
deal with such. You will not restrict me and I
will not restrict you. There is only ONE possible
deal I will make with you. Read on, macDuff...

> Show us what you are Bill, show us that YOU ARE THE MAN! Take
> part in this deal and get your buddies to do it too.

I do not speak for, nor pretend to speak for anyone
else but me. You make your own deals with others,
if you want. I don't "get" anyone to do anything.
Period. Just me. And just you, Smeggie. You and
me, pal.....JUST you and me. It can't get any better
than that.

> Bill, allsafe, Phil, Richard, & the rest, if you
> take part in this deal you will redeem yourself to
> this NG & make it a better place. I urge you to
> do it. You will gain respect & I will personally
> support you all in the future if others give you
> any trouble!

I don't WANT your "support". I don't WANT your "respect".
I don't want ANYTHING whatsoever from you. Get a grip on
that. I don't even want your money, assuming you've won
the Lottery. I don't want a friggin thing from you, you
low-life, scuzzy, slimy, lying, connivving, manipulating,
imbecile. Get THAT in your thick skull, will ya?

There is only ONE, singular possible deal:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

THAT is the deal, OffalBreath, and the ONLY deal.
YOU abide it; I abide it, and we will have done our
part to making the newsgroup a better forum.

We're not going to diffuse and dilute our focus; we're
not going to make "deals" for anyone else; and we're not
going to deal with ANY issue outside of JUST thee and me,
Smeggie. You got that? If not, GET it.

Take it or leave it or shove it where the sun
never shines. Your call.

You clearly have no idea what you're talking about. Why don't you just answer the question--if you can--and forget about the lectures based on the logic of a ham hock.

That is a very good price, but it is a shame that particular vendor
has to "mask" their profit in riduclously inflated shipping and
handling costs.

It has been done a few times now. Most of the commands are known but not
everyone knows how to implement them. For example, when you look at Icom's
software, they are the only ones who implement AFC support. There is a
specific set of commands for that but most 3rd party software had enough of
a problem just getting it to work. This EEPROM thing is still an isolated
event, I have heard of only 3 Icom's going south and apparently it was the
software. It is goofy but for SWL work, the Icom software is fine. For
scanning it is not very good (software).

Well, whaddya know.....here's ol' Stewball UpHis
jumping back in. Hot damn, Sam, we haven't seen you
around in a long time, Uppie. What brings you
galloping back into town? Somebody must've passed
some gas and you smelled it and wanted more. Huh?

Well, anyway, Uppie, why don't you traipse over
to Dejanews and do a little research on things,
say over the last six months, and see what turns
up. Then come back and spew your drivel.

One thing's for sure..... what with your sweetie
Mackey running off at the mouth for so long, I'd
venture to submit that I had a right to talk about
it. The real question is what dragged your cockroach
self outa the cracks?

No one's said a thing to or about you, Uppie!
So where's your wild hair come from? Or rather,
where's it stuck, pal? Maybe you need to go for
a haircut.

> ever said. In fact, I'd bet that anyone who went to any San Diego public
> library could post from that NNTP host. Your clueless accusation proves
> nothing - as usual.

Weird! Very strange. Especially since the posting
hosts and IP addresses differ radically. Not to
mention the paths. Oh, and let's see, also the
newsreader, the MIME, and other salient points
of the header.

Similarities include the e-mail address/ISP and the
city of 2,000,000 people. But you can use any e-mail
address that you want.... So the ISP the guy uses for
e-mail and news only covers half of San Diego.

That's like saying anyone who posts from Portland
is the Idiot. I'll bet a lot of people will object
to that one.

I don't think an outsider can get an account
with my ISP.....so that's not possible, but this
ISP is having problems with "relaying" where
outsiders find a vulnerable server on this ISP
and then route their traffic through it.

The Idiot isn't THAT well equipped or smart,
though. Anyway........

<sigh> I'm derned if I do and derned if I don't.
I got my Twit List working so good now, I miss
a lot of original traffic and then get tempted
to turn it off for a minute to take a peek at
all the goings-on. Like, I don't get anything
now that has the Idiot's name anywhere in the
headers.

Guess I should probably fine tune it to exclude
any traffic with his name in the text as well.
I did see that the Idiot's hide is chapped and
smarting from the most recent Size #13EE, though.
I guess it had the intended effect.

Heh heh heh heh.....

You didn't qoute the whole message Mackey, But tell you what , I know most of us on the newsgroup would stop posting off topic if you would. All you have to do is start posting on topic and not give a rats butt what Bill or anyone else post as long as it is not about you.

How simple of an agreement can there be , if you really want to stop the flaming here is your opportunity to show the rest of the people on the newsgroup that you really want it to end .
Stop posting off topic messages begining at midnight on Friday the 19th one minute after midnight which will be Saturday the 20th the only posting you do is on topic .

The ball is in your court Mackey, are you going to prove you what to end the flames or are you going to prove the rest of us are right when we say you don't want it to end ?

Why would a worm with five (5) E-mail accounts (his own claim) attempt to validate an accusation with DejaNews?

But here's a hint for ya Mackey; that post was a WHACK AT YOU! Anybody with an eighth grade reading level could have told you it was a goof!

For chris-sakes: The writer was offering to be your *friend*! How often does *that* happen? Couldn't you tell from the outlandish pigeon english?

Hoo-boy...

You're really dense.

You friggin' loon.

Matter of fact, Sal, it doesn't prove that at all.
The NNTP-Posting-Host in the header shows where
posts are injected. Also the last bang on the
PATH line shows it.

The above just suggests that both of us get e-mail
via San Diego Roadrunner. I do. I don't know about
the Wah dude. I sent him e-mail and it hasn't come
back nor been replied to. The squirrely thing is
that I don't post from Roadrunner and the Wah guy did.

That and other major differences of the Wah guy suggest
the above Faricy prick doesn't know his arse from a
hole in the ground.......NOT a rare malady these days.

Worse still......this Faricy dork crawled out of
nowhere recently to whine, howl, and blow snotbubbles
about all the flames and crap on the newsgroup, even
to the point of threatening to complain to ISP's.

But you know what? The snotnosed brat just can't keep
from injecting his own flames....and he hasn't made
a scanner-related post yet.

And he has the gall to wonder why he's on my Twit List, too. Looks to me like when God passed out brains, Faricy thought he said TRAINS and said, "No thanks, I'm scared of them." and asked for a space <ship> instead. There sure is a vacuum betwixt his ears anyway..... Reminds me of his protoge and hero, THE Idiot.

So whuzzup Sal? You been doing okay?

> say you don't want it to end ?

There is no profit in it for him if it were to end.
He'd have to fade into total ignominy..... No one
would talk to him. No one would elicit or invite
his views and opinions. No one would even think
about him anymore.

This, as it sits, is the ONLY way he can get
any attention at all. So he won't end it.
All you'll get from him for your time and
trouble of suggesting an end, is doublespeak and
bullshit.

He's here for one reason and one reason ONLY,
which *ain't* scanners and scanning. To end
it is not in the Idiot's master plan.

However, I have totally TWITTED him out of my
system, and in another day or two, I'll have
him filtered out of any text or mere references
to HIM. I will then make an effort strictly on
my own, no strings attached, to get on topic
and stay there.

Bets are, however, that THE Idiot will interpret
that as a weakness and use it as an excuse to
come on stronger than ever.

The thing is.....he CAN'T get on topic because
he has no interest in scanners and scanning.
That's the supreme Catch-22, you see.

Source record: 156558
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Bill, I don't know why it works so well, but it does in this instance. I am not saying it will work for everyone nor am I recommending it to everyone. But if someone is just listening to local repeater systems with strong signals, then it does work fine in that instance.

You mentioned my location. I do know that plays a major role in hearing distant low band signals as I live on a hill in the highest part of the city. The elevation of the city where I live is 492 feet ASL and my house is another 750 - 1000 feet higher than that. Also, my antennas are on a 40 foot tower mounted on my roof.

I have just today, installed a second antenna for the second scanner and removed the splitter. I am using RG-11 coax with F connectors and it seems to be working great. I haven't had time to compare how much better the new set-up will be, but I'm sure there will be a great improvement. The old antenna & cable I replaced was 10 years old.

I'm not saying you were wrong saying that a splitter would not work, just that in some cases it does work depending on what you are listening to and how strong the origional signal is. It is just a possible alternative. The way I look at it, if something works to your satisfaction then use it, if not try something else.

Thanks for your input, I appreciate it and I'm sure others do to.

Mike

The two FREE sources of FCC data are:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

and

http://www.wvsc.wvnet.edu/~fcc/index.html

the first one is actual access to the FCC database and the second is somewhat
older. Keep in mind that you may have to work a little hard at sorting out
the information you want. As for PERCON, you can access their site and use
their current Spectrum database on-line. .....enjoy...

> of proof, you are a liar and do not have the degrees you claim. The
> only way for you to prove yourself on this point and prove me wrong
> is to provide the name of the school and the year the degree was

This is because *MANY* people have asked this same question of
Cheek LONG before anyone asked me. Cheek was NOT willing to
post data of year/shool name of his *CLAIMED* Engineering Degree &
YOU & a few others said NOTHING to him. Yet, you expect ME to
post info that you don't expect others to post.

Perhaps a deal! I *MIGHT* be willing to post my under-grad
degree info. If you then get Cheek to post his engineering
degree info then I would post the REST of my data upon
confirming CHEEK's data to be correct!

Take it or leave it!

If Cheek is telling the TRUTH & has a engineering degree, then he
will NOT be afraid to give this info!

> If you are really trying to write software like you claim, post samples
> of the source code.

You must be FOOL! I am NOT about to post the source code of some
software I expect to profit from!

I didn't say anything about the newsgroup, you
pompous, sanctimonious nincompoop. I'm talking
TO you, you friggin nitwit.

> PLEASE stop causing problems,

I didn't cause a problem, Smacksie.

> PLEASE return this NG to the users for
> enjoyment free of you senseless flames.

THAT is wholly in your power, Wingnut. All
you have to do is ACCEPT the 4-point deal
I offered you..and here it is again, in case
you forgot or "cancelled" the original one:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

Accept it, and you and me will NEVER interact
again.

I didn't flame anyone. YOU are the one who
confessed and bared his soul.

> & let this NG go back to the topic of
> discussion,

We ARE on THE topic of discussion: your confession.

But if you are talking about anything else, then
accept the deal I offered you:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

Simple, Smeggie. Accept it. It binds me
as well as you. I can handle it. Why
can't you?

Any scanner made in or imported into the USA *after*
March, 1994, is not capable of cellular nor even
modification for cellular. So if you are looking
at the USA market, then it has to be an older scanner
and it will come from the "used" or pre-owned market
now.

John "I'm such a pathetic liar and loser" Mackey-KA0SSF tried
to snivel and weasel out of yet another lie:

> WRONG on BOTH. First, YOU ONLY ASKED FOR ONE! Second, the
> league DID NOT re-write my article! If you still say that,
> then post your proof or be made to be the liar you are!

You've only writen one document, Toilet Boy. Your inability to
do simple arithmetic is further proof that you do are an ignorant
and illiterate moron.

Originally, you claimed to have written several articles, as in
plural, as in more than one, for the ARRL and other technical
publications.

I proved you a liar and posted that proof in my post dated January
12, 1998. Since you are so incompetent at looking things up in
DejaNews and have such a pitiful memory (a proven indicator of
severely limited intellect), here is a copy of my post my proof.

As I said before and continue to say: you are a liar and a fraud.

Message-ID: <34BAC094.49212154@primenet.com>
Date: Mon, 12 Jan 1998 18:17:08 -0700
From: Richard Kendrick <wa7twi@primenet.com>

OK Toilet Boy, you say you've written lots of articles for the
ARRL and other technical journals. The ARRL does not show you as
author for anything and no articles in ANY technical journals
have been found. Here is the proof that you lied about your
articles.

Several people have visited the ARRL Web Site (www.arrl.org), and
searched, finding nothing written by you. You claim they used
faulty search methods. Here are the results of my search of the
ARRL Web Site using "john mackey" and "ka0ssf" as search
parameters. Before you get all excited and claim my search method
was faulty because I did not use any capitalization, the search
engine is case INsensitive.

Regarding the search for "john mackey," the first, third, and fourth
hits showed only because of "John" and "Mackey". The second hit
refers to The ARRL Letter for July 5, 1996. That was the issue the
contained the item about PARG catching a jammer.

Regarding the search for "ka0ssf," the only hit was a duplicate from
above.

The original article appeared on the PARG web page (www.parg.org) does not credit you as the author. That article is reproduced below in its entirety. The next article is from the HamRadio Online web site (www.hamradio-online.com), also reproduced below in its entirety, does show you as author. Finally, the item in The ARRL Letter is shown below as well. It does not credit you as author either.

It is interesting to note that the HamRadio Online piece appeared in the June 1996 issue and the PARG piece appeared in July 1996. Why would your own group not credit you with authorship? Why would you use the email address of someone else (mscott@teleport.com) instead of your own? Oh yes, I remember now. That was the time (March through August 1996) that you were using one of eight bogus addresses because you were stealing Internet access. Let's see, you were using the addresses:

John.Mackey_Jr@p234.f40.n105.z1.fidonet.org
John.mackey_jr@p234.n40.f105.z1.fidonet.org
Here.now@present.com
no.address@anywhere.com
no.address@anywhere.gov
No-place@anywhere.org
no--place@any-where.com
no__place@any__where.com

Comparing the three articles side by side, it is very clear that the first article, which appeared in HamRadio Online, was reworked for the PARG web page. Then the ARRL edited it for their use. No matter how you slice it, you have not written several articles, as you've claimed.

Again, Toilet Boy, you lied.

And now, the evidence:

Amateurs Locate Police Jammer in Oregon

by John Mackey, KA0SSF, mscott@teleport.com

During June 1st, 1996 in Seaside Oregon, where the SEA-PAC ham convention was being held, a group of hams belonging to PARG (Phantoms Amateur Radio Group) were down on the beach front enjoying the annual PARG bonfire. One of the hams (KB7YZS) was monitoring the local Seaside Police Dept. He heard someone cursing and yelling at people. At first he thought it was coming from the UHF side on his hand-held transceiver, but to his surprise it was coming from the VHF side which was monitoring the police.

He promptly notified everyone at the bonfire to listen. After a few minutes of listening to the person, the members had figured out that the person was up in a balcony, was with 3 or more people and 2 of which were females. They realized this because of key things he said and voices in the background.

The 4 PARG members in the group (KB7YZS, KB7YZR, N7XMD, and AA7UP) just happen to be most of the PARG Interference Committee. They immediately activated the PARG Interference Committee direction finding operations. They promptly tracked down the interference to a specific location of the Shilo Inn and searched for someone matching the description. After only 5 minutes they saw a group of people on the third floor of the Shilo who matched the description. Then they saw him pick up his hand-held transceiver and speak into it. At the very same moment the voice on the police frequency was saying "Hey, fat ass, yea you in the black pants and the white shirt". While he was saying this on the Seaside Police frequency the members noticed a man wearing those clothes, a little on the heavy side walking directly underneath them.

One of the PARG members saw a Seaside Police patrol car in the area. A PARG representative approached the officer and asked him if he was looking for a person causing interference to the Police Frequency. He seemed very upset and replied "YES"! The PARG

representative then informed the Seaside Police Officer where the malicious interference was coming from. Three other PARG members were on their way to the third floor when they saw the people (from the room/balcony where the interference was) come running down the stairs and away from the Shilo.

The officer took a report from the PARG representative, including an exact location of the motel room and spoke to the hotel manager. After 2 hours the interference started up again. The Seaside Police Officer went directly to the room the PARG Interference team pointed out and caught the person in the act of doing the deeds.

The above is known to be facts. The above mentioned is knowledge from speaking the PARG Interference Committee members and to a friend of the suspect.

The man who in is question has a call sign of KE6VNU and is from Central California. He apparently was in Oregon for the ham convention. Information indicates he was released from jail only a short time before this incident, the charge he was in jail for was malicious interference to the local police in his area. This obviously did not teach him his lesson. We understand that he caused a great amount of interference to the Sacramento County and Roseville emergency/public services communications and often identified himself on those malicious transmissions as "The Phantom Jammer". We were told the charge Seaside Police brought against him was "Interference of a police officer in line of duties".

Note: It is an unfortunate coincidence that the malicious interferer used the name "Phantom Jammer". He has absolutely NO association with or relation to PARG (Phantom's Amateur Radio Group), the group which located him & turned the necessary information into the Seaside Police which led to his arrest for the interference. We did not release this information until now at the request of the local law enforcement officials to prevent tainting their investigation.

This was PARG's second year in a row of providing public services during the Seaside Ham Convention. Last year several PARG members apprehended a purse thief (after a brief foot pursuit), returned the purse to the rightful owner, and detained the suspect until police could arrive. PARG also performed crowd control activities at this time due to the large number of people who stopped to watch the purse thief incident.

PARG is the Phantom's Amateur Radio Group in Portland, OR and is Portland's most active VE testing, repeater club, emergency communications, and ham radio group. Please visit our web page at http://www.teleport.com/~mscott/dumb.shtml.
You can contact PARG at

PARG, PO Box 1586, Beaverton, Oregon 97075-1586

The PARG Crack
The Official Newsletter of the Phantoms Amateur Radio Group
"We are anything but complacent"

July 1996 - Portland, Oregon - ONLINE EDITION

Interference Committee Stops Californian Jammer

The SeaPac ham convention was saved once again by PARG representatives. In a valiant effort to restore peace and safety to the coastal community, members of the PARG Interference Committee assisted Seaside Police officers in the apprehension of an individual jamming their dispatch frequency.

During the annual PARG bon fire, several members of the Interference Committee were monitoring the local police dispatch frequency. As they were completing a safety check of the area before returning to their accommodations for the evening, the Committee members heard someone sending malicious transmissions on the VHF dispatch frequency. Immediately, the field operations of the Interference Tracking Unit (ITU) were activated and the search began for the jammer.

After a relatively short and efficient investigation, the ITU determined that the illegal signal was originating from a shore front hotel. This information was derived from both direction finding techniques and verbal clues left by the jammer.

The group immediately broke into two teams and sent a representative to contact a police officer who was patrolling in the area. The other team went to the hotel from which the suspected jammer was transmitting and watched his room for a possible escape attempt.

Soon after contact was made with the police department, the suspects were seen going down the hotel stairs and away from the building.

During the time that the suspects were out, the jamming ceased. About two hours later, the jamming started up again. When this happened, the officer the PARG representative had contacted returned to the room and apprehended the suspect.

According to reliable sources, the suspect, KE6VNU was arrested by the Seaside Police Department for the charge of Interfering with a police officer in the line of duties. In addition to being

involved in this situation, the jammer was allegedly involved in similar activities in Sacramento County, California.

The outcome of any prosecution will be covered in a later edition of the PARG Crack.

PHANTOMS HELP NAB "THE PHANTOM JAMMER"

The Phantoms Amateur Radio Group (PARG) of Portland, Oregon, is claiming credit for helping police to nab "The Phantom Jammer," who was interfering with police calls in Seaside, Oregon, during the Northwest Division Convention in early June. John Mackey, KA0SSF, of PARG reports members were on the beach enjoying the annual PARG bonfire when KB7YZS heard someone "cursing and yelling at people" on the VHF police frequency, which he was monitoring at the time. After a few minutes of listening, members figured out that the person was up in a balcony and was with a mixed group. KB7YZS, KB7YZR, N7XMD, and AA7UP (who just happen to be most of the PARG Interference Committee) immediately activated direction finding operations and tracked down the interference to a local motel. It only took them a few minutes to spot a group on a balcony, one of whom was using an H-T. After noting that the transmissions coincided with what they heard on the police frequency, PARG informed Seaside Police. A short time later, Mackey reports, Seaside Police "caught the person in the act."

Seaside Police subsequently charged Bobby Lee Aguero, KE6VNU, of Rocklin, California, with interfering with a police officer. As we've already reported in The ARRL Letter and in QST, Aguero, 19, already faces similar charges in California.

Mackey said this was the second consecutive year PARG got to provide a public service during the Seaside convention. Last year several PARG members apprehended a purse thief--after a brief foot pursuit--returned the purse to its rightful owner, and detained the suspect until police could arrive. PARG has a Web page at http://www.teleport.com/~mscott/dumb.shtml. The group's current president is Justin Bousquet, AB7NG.

> Yet, you expect ME to post info that you don't expect others to
> post.

I didn't ask Cheek for proof of *your* degree because *he* didn't
claim *you* had a degree. *You* made the claim of having a degree.
I said you were a liar and asked *you* for the proof. Since you
haven't proved you had a degree, you are a liar and a fraud.

> Perhaps a deal! I *MIGHT* be willing to post my under-grad
> degree info. If you then get Cheek to post his engineering
> degree info then I would post the REST of my data upon
> confirming CHEEK's data to be correct!

This is just another one of your feeble attempts at dragging
irrelevant data into this discussion to deflect the attention
from your lying about your (lack of) degree.

You want a deal, Toilet Boy? This is the only "deal" your ever
going to get from me. With regrard to your degree, you are a
liar, you do not have one. If you want to shut me up, prove your
degree. If you don't prove your degree, you will continue to be
branded as a liar and I will constantly remind you and others of
your lying ways.

> Take it or leave it!

You're unwillingness to prove your degee is concrete proof you
are a liar, a fraud, and lack any credibility or integrity what
so ever. But, then we all know that.

> If Cheek is telling the TRUTH & has a engineering degree, then
> he will NOT be afraid to give this info!

If you want the information about Cheek, ask him. I'm not his
babysitter.

John "I'm a nobody and I want everybody to know it" Mackey-KA0SSF
continues to show his technical ignorance:

> > Then you denounce the technical expertise of Roy LeWallen
> > who has openly endorsed the usage of WD-40 in electronic
> > applications, more precisely cleaning potentiometers.

> I STILL do, too!

It is very common for ignorant little pups like yourself with no
talent and no experience to deny the experience and expertise of
older more practiced people like Roy LeWallen and Bill Cheek.

Mr. LeWallen has been working as an engineer for as long as you've
been alive. If you don't believe me, I don't care. Check it out
for yourself from any one of the various callsign servers and do
the math. But, you can't because you're too stupid.

You tried to argue that WD-40 was unsuitable in electronic
applications because it was flammable. Millions of women world
wide use hairspray, which is also very flammable, on a daily
basis. Your miserable and pitiful attempts to discredit the
use of WD-40 is specious and lame (like you).

You claim Cheek is an idiot and attacked his opinion because he
advocates the use of WD-40 but you never attacked Roy LeWallen
for the same opinion. Why not? Because your ONLY reason for going
against the use of WD-40 is because Bill Cheek recommends it
careful use.

Here is the message for you again:

I use WD-40 all the time on swiches (rotary, AC power, relays, you name it), noisy potentiometers, sticky slugs in old UHF rig inductors, locks, and anything else that slides or turns. Doesn't hurt any of 'em. It's one of the Great Inventions of the 20th Century (along with latex paint and plastic drinking straws. .)

John the truce is only going to work if you leave Bill alone , stop replying to him , stop posting about him , stop asking people to help get Bill to participate in the truce.

How simpler can it get John, all you have to do basically is act like Bill no longer exist and he will do the same with you.
You stay out of his way and he will stay out of your way.

You don't have to keep tacking on special conditions as that shows your not earnest in wanting the flames to stop and only want to continue attacking Bill which proves what many have said that you are carrying out a personal vendetta on the newsgroup.

Now do you really want the flames to stop?, if so then stop replying to Bill, stop posting about Bill, stop asking Bill to stop the flaming and join the truce.
Bill has already stated he will stop as soon as you forget he exist and you go your own way .

Things can't be simpler and your not gaing any support on here , the support you did have has been lost as the people have seen that you don't want a truce , prove them wrong John and stop what your doing , let the newsgroup go back to normal.

Wrong MACKEY. It isn't a matter of you asking for a
truce. It is you surrendering in defeat and disappearing.
You have been beaten and you know it. But you are too
much of a baby to know when Bill has beaten you down
in the playground. You don't ask for anything MACKEY...
you do what you're told and when you've been told it.
When Bill tells you to jump... we want you to ask (respectfully)
how high. You will refer to him as SIR or BOSSMAN at all times.
You will say how sorry you are for being such an insect.

2565. MACKEY needs to go into the Military

BUT - I can filter this and that and not see crap - but filters ain't perfect. 'specially when implemented by dumb-asses like me. Why should I have to figure out how to filter anybody out of a newsgroup in which I am inrerested? I look at all the synopses and decide which to expand. LOTS of these synopses are 'tween two (2) people. That ain't what this stuff is for.

Get off my computer!

Nah, get the BCT-7. In my arrogant opinion, the BCT-12 is way too limited ESPECIALLY for Southern California.

The BCT-7's state-by-state pre-programming (on Highway Patrol, police & DOT banks) is remarkably accurate...except for trunked, of course. And you get up to 25 EMPTY channels in each service "bank" that you can program with whatever you want. And a 25-channel "private" bank that's all yours to program.

I've been scanning for 30+ years and hated the thought of no keyboard programming, but for traveling the BCT-7 is quick and easy. Avoid the BCT-12.

Yes. Wire up an internal serial port to the frequency counter with a data link tied to the integrated circuitry right before the decoder to the display. Then, take that output from the serial port and plug it into a laptop serial port. Use 9600 baud. Battery life is key. You gotta make sure you find out what time the babes are naked at shower time in the locker room and set the "auto on" on the laptop to 1/2 hour before naked time (to account for boot up and panty removal). Then, make sure you have a cell modem with MNP10 protocol to hook up to a cell phone. Get the laptop to log the frequencies every 60 seconds and then transmit this info to your car parked around the block where you are jerking off holding your other laptop with MNP10 cell protocol cell phone auto logging notepad. You will then have your frequencies.

Good luck.

- ACH

2595. FreeTracker DB wanted for the D/FW area

Newsgroup: rec.radio.scanner
Date: 1998-06-20 00:00:00 UTC
From: gcrankbait@aol.com
Message-ID: <1998062005372200.BAA12203@ladder03.news.aol.com>
Source record: 156272

Would anyone in the D/FW area be willing to send me a copy of their FreeTracker databases that they use?

I just started using FreeTracker and would just like to save a little time building the database...

Thanks!!
GCrankbait@aol.com

You would be best NO to do this. You would increase or invite front
end overload. Use a coax switch to switch between the two
feed lines or use a splitter that is frequency sensitive like
what comes from Comet or Diamond.

I think Ryan is just a 15 year old kid so maybe we should cut him a
little slack. Most kids his age are hanging out in chat rooms or
pirating software in the warez groups. At least he's motivated enough
to try and learn something about scanners. He'll figure out Mackey's
true colors plenty quick.

>So whuzzup Sal? You been doing okay?

I been doing good. Just got done watching "The Godfather II" on that
USA channel. Now, that's one inspirational movie! Every time I see
it, I want to make Mackey an offer he can't refuse. You don't happen
to know his shoe size do you?

I am considering the purchase of a Uniden BCT-12 Bear tracker. The device claims to do some amazing things. What have been the findings out in the field among the people that own one?

I would be interested to know 2 things.....the value of the unit to detect the presence of an imminent (traffic enforcement) contact, and its quality as a general scanner for the road.

For the record I live in S.Cal. and have generally been disappointed with non-programable scanners, yet like the idea of not having to program frequencies every time I take a trip is appealing.

Thanks

Robert

>for my house called, I puase to hear the call.

The other day I was driving along and passed an intersection. About 45 seconds later I got to a stop light and then pulled into a Wal-Mart parking lot. Couldn't have been but about another 30 seconds when I heard a call on the scanner saying there had been a wreck. The ambulance company sent 3 ambulances, but the first crew there said there were three J-4's (DOAs), so one of them down graded. One of the two remaining injured died at a hospital, and the surviving driver, a speeding 18-year old with a suspended license and traces of cocaine in his blood, now is looking at serious charges in the deaths of four other people.

When I heard that call, I realize I had missed that wreck by about a minute. It closed down that section of highway for about 3 hours, letting only minimal traffic through in either direction (4 lanes, divided). I did a prayer, thankful that I hadn't been involved.

At that same intersection a couple of days later, another elderly woman was killed when she pulled out in front of a semi truck. It's a cross-over that comes out of a Sprint parking lot and crosses a highway, letting you go south. Traffic going north is coming down a hill at about 60 mph.

I'd get a BCT-7 , it will detect the state police and give you the
frequencies, which the BCT-12 won't.

I am going to be travelling through Pa. and I was wondering if the state highway patrol has gone to a statewide trunked radio system and if so what the frequencies might be. Also will be travelling through the Allegheny Forest area if anyone has any frequencies for this area as well. Thanks to all that reply.

ICOM R7000 receiver with TV-R7000 video adapter
AM/FM/FMw/SSB 25MHz-1000MHz (no block)
$900

This receiver is in near mint condition and includes the 12V DC option as well as the TV-R7000 video adapter. All original boxes and manuals are included. I'll also replace the internal lithium memory backup battery prior to delivery.

Price includes shipping by UPS ground within the continental US.

John-Mackey-KA0SSF wrote:

> Truth hurts, huh allsage?

Not at all. All successful humor starts with a grain of truth. Truth can sting, but it builds character. I'm not intending to be preachy. I engage in the routine deceptions required of modern life; I don't write my PIN number on my ATM card, I don't leave my name on my answering machine, and I don't post to unmoderated NG's with a valid ID. Such precautions are well worth whatever damage they do to your conscience.

But in discussion, interaction, and even conflict, the truth is indispensable. It sets you free from having to remember what you posted last night, last week, or last year. It allows you to direct all your energy to discourse in the present, instead of rationing your efforts between the issue at hand, and the maintenance of lies that you can't live up to in real life anyway.

So, it may have seemed to be a humorous self-depreciating post about my own expertise in the scanner hobby, but it's the truth.

You oughtta try it sometime.

> I don't have any connection to him. He dislikes you all on his own!
>

Well then,....as I always say: "If it Quacks like a Mack; Whack it!"
You either:

a) Whack the Mackey
or
b) Whack someone who sounds like Mackey

You can't lose.

> At midnight tonight we will try having a truce. No flames, no
> snide remarks, no attacks. PLEASE join us on this for the
> benefit of the group & demonstrate your true intentions as
> being good. It's not to liate to redeem yourself to this

2633. FS: AVCOM SDM-42A Spectrum Display Monitor

Newsgroup: rec.radio.scanner
Date: 1998-06-20 00:00:00 UTC
From: Ron M <monfeli@telis.org>
Message-ID: <358BF3FA.61738DD6@telis.org>
Source record: 156310
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

This professional Spectrum Display Monitor is designed for use as a panoramic signal display for VHF scanners and Communication Receivers such as Icom, AOR Realistic etc. The SDM-42A displays all signals present in the receiver's IF on a 5" CRT so that the operator can monitor signal activity up to a full 10mhz wide. The operator can then quickly tune to signals as they appear in the spectrum display. This greatly facilitates locating and tuning of intermittent signals as well as surveilling a particular frequency band. This unit has been used in a hobbiest environment not a professional one and is in excellent condition. Asking $850.00 plus shipping.
Ron

Some of us "older folks" remember these people: Back in the 60's, 70's and 80's and probably today, they used CB radios to clog up the airwaves with their nonsense.
The answer: Change the channel, because they are not going to grow up.
Congratulations on being only 15 and able to recognize juvenile behavior.

The cordless phones I have so far played with can go into test mode if you unplug the battery, and then plug it back in while you hold * and #. Other phoned may have different sequences, but they all have them, just investigate a bit...

Mike

P.S. I have never seen a Nextel unit, but in my experience, the more a company braggs about their 'encryption' security, the weaker it is. Bragging encourages attacks to prove them wrong, so the best ones keep quiet.

No, Smegma Breath. I told you in another
post that I took you off to make you an
offer for a deal. Since then, I decided
to keep you off my Shit List for maybe
the weekend so's I could hose you down
a little more.....

.....and maybe make a man out of you.

Meanwhile, I keep wondering why you don't
respond to that offer of a deal. It's a
deal of a lifetime, Smeggie.

You poor sap.

Nah....their newsgroups are for the birds.
I'm surprised that the Wah guy posts from there.
First san.rr.com poster I've seen in a while.

> >Worse still......this Faricy dork crawled out of

> little slack.

He may be 15, but he's got a web site that proclaims
his company as the RySoft Corporation. And he hasn't
posted a scanner-topic article yet. I put him on my
Twit List for general principles, just in case he is
15 yrs old. I mean, Mackey is the only teenager I
can handle right now. I'm launching my last one
from the hangar this year.....and I'm tired, Sal.
And Smacksie ain't even my kid.....well, he is, but
I left him for his mammy to raise when I couldn't
stand the looks of the little green wretch.

I've been raising and guiding peckerwoods for nigh
onto 35 years now.....and I'm done at long last. I
didn't want to take on this Faricy prick, too.

> Most kids his age are hanging out in chat rooms or
> pirating software in the warez groups. At least he's
> motivated enough to try and learn something about
> scanners.

I hope so, but I sure don't SEE him asking any scanner
questions or posting anything on the subject, so I dunno
what he's here for, unless to take lessons from Smacksie.

> He'll figure out Mackey's true colors plenty quick.

He might BE Mackey, though. Smacksie's been spouting
off lately how he's inventing anti-spam software, and
this here Faricy weeny purports to have a software
company....Visual Basic 5.0, no less. So there is a
connection anyway. Them two might be joined at the
hip or even be one and the same person, for all I know.

> >So whuzzup Sal? You been doing okay?

> I been doing good. Just got done watching "The Godfather II" on that
> USA channel. Now, that's one inspirational movie! Every time I see
> it, I want to make Mackey an offer he can't refuse. You don't happen
> to know his shoe size do you?

Yes, matter of fact, I do. Mackey's shoe size is
5B, petite. In fact, he does better in women's
styles than men's. Why, you mixing up some concrete
or something? It won't take much. You can write it
off as spillage......

2654. Re: Uniden parts source needed

I went to their web site for customer assistance.
They e mailed me back in a couple of days with a price quote and this number.
.1-817-858-2863

For the parts i needed(a capacitor & transistor)
the cost was $2.75.The problem is a minimum order of $5.00 plus $5.00 for
S&H.I'm trying to find a local place to buy the parts.

I haven't messed around with the mil-aero band
since the Navy pulled outa there. I don't have the
foggiest idea of what's going on over there at
Miramar anymore. Those Marines do things a whole
lot different than the Navy and I haven't caught
on to what's happening there yet.

Haven't had much time to work at it, though.

What you might do is on a weekday, put your
scanner in the SEARCH mode in 25 or 50 MHz
chunks at a time, like say 300-350 MHz, and
just let it search and find freqs for a day
or two at a time. Then change to another
50 MHz chunk and let it search there for a
couple days. Heck, inside of a couple of weeks,
you ought to have most anything interesting
logged in.

Been thinking of doing that myself....but I'm
lazy (like you are.) heh heh heh.....

No, Smeggie, *we* can't speak for others.
It's just YOU and ME, items 1 - 4. The rest
of the world will do a lot better on that
score alone.

And when it proves to work fine, then you
can make a private deal with Phil, George,
AllSafe, Richard, and others.....and I can
make deals with who ever on my own .....

But right now, Smeggie, it's just thee and me,
you see, so take it or flee.

It's real easy, Smacksie. Whatcherproblem?

I have one of these models I purchased a few years ago. I was poking around at the Uniden site and noticed that they advertise this model now as a "50" channel receiver while mine has only access to 20 in private mode. Is this just the way it is.

? What are the other 30 channels.
? Does mean there are newer BC700A models

Source record: 156348

I apologize for the subject - but did it get your attention?

I have been in electronics for forty (40) years and scannering for almost all that time (39.989). I enjoy (and feel it important) to monitor what passes through my mortgaged property.

I subscribed to this NG for info on SCANNERS.

It is, infrequently, entertaining to see some comic relief. IE: who hates who (whom?) or whatever.

I have seen DEALS offered between individuals! What the fuck does this NG have to do between two (2) people? This is an info source about SCANNERS. If I am wrong I (and all my friends and all of my students and all their friends and all their students and all my friend's students...) will get the suggestion to go elsewhere.

Do you want me to exclude from my information base?

2673. FAQ : Cheek & Mackey

Newsgroup: rec.radio.scanner
Date: 1998-06-20 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <358C32A3.B90356F9@pacbell.net>
Source record: 156350

Reposted without permission - Original author is k4cc@aol.com (K4CC)
and was originally posted 6/20/98 in the alt.scanner usenet newsgroup.

Frequently Asked Questions about Cheek and Mackey:

1. Who is Cheek?
Bill Cheek is a fairly well known author, experimenter, engineer who
has
contributed a great deal to the scanner hobby for a number of years
through his
books, magazine columns, newsletters and newsgroup postings.

2. Who is Mackey?
John Mackey is the self-appointed guardian of the entire NG who has
the need
to be noticed by posting messages that have no bearing on the scanner
hobby and
which are fatually and gramatically suspect.

3. Why don't they like each other?
Mackey feels that Cheek is a demon, a liar and general miscreant if
he
writes anything that is in even faint disagreement with anyone, be it
Mackey or
anyone else. Cheek feels sorry for Mackey and has attempted to help him
by
indulging Mackey's need to post meaningless sludge.

4. What are the "problems" in the NG to which Mackey keeps referring?
No one is quite sure, as they seem to be problems only to Mackey, who
seems
to feel that they are problems for everyone else, whether they are or
not.

5. How can I keep myself from being subjected to Cheek's and Mackey's
posts?
There are any number of sophisticated techniques available including,
but
not limited to: filtering, skipping or not reading them.

6. What is smegma?
Check the dictionary definition for snot.

Hope this helps.

I did the same thing myself without spending any money. I just attached a low band whip cut for the frequency I wanted to the top of the discone. Works great. And cheap since I bought my discone at Rat Shack for $9.95 on a close-out.

I have Trunker 3.7 up and running.I am tracking the NYCTA Motorola system.I
need help with the ID's.Take for instance the the ID# 79e1. The 79e is the radio ID.The 1 is the talkgroup system.Day to Day it some times changes 79e7.79e6 and it (Trunker) fails to ID the radio.Do i have to enter every code 79e1& up or is there a way to enter just the radio ID and trunker will do the checking for the talk group system.

Thanks in advance
Robert

Returning to this newsgroup after several months of absence. It's like a bad soap opera; same people doing the same flaming over and over again. Very little substance, lots of useless crapola.

You clowns must sure be envious of Bill Cheek. The man has done more to advance the scanner hobby than any of his detractors can begin to comprehend. Since you don't have the brains to challenge his technical abilities, all you can do is make nauseating personal attacks against him. Are we a bit jealous of the man's intellect and success? Obviously. Get a freakin' LIFE, will y'all?

As of this week, 1100 UT-106 DSP units are backordered from ICOM.

They are still only guessing at July sometime to get them in.

We are on the top of the list for backorders, and our customers will
get them as soon as they appear.

Price is $120 if you buy/bought the radio from us, $135 if you did
not. Price includes domestic postage.

Email credit card info to order (your card will not be charged until
the order is shipped).

Regards ..... Steve

No "we" haven't asked "Cheek" for a truce. Not
once, not twice, not any times. And there ain't
gonna be any of this "we" shit, either. It's
you and me, Smeggie.

You want a truce? Go read the deal I offered
you. That's a truce that doesn't get any better.
And it will work if you read, accept, and abide it,
you flippant, lying, low-life reprobate......

A question for anyone who may know...

I was thinking about putting another antenna on the roof next to my discone and run both antennas thru a coupler and into the radio.

Would there be any problems with doing this? Overload the scanner? Should I just switch between them and only use one at a time as needed? What type coupler/splitter should i use.

Thanks for any input...

> the flaming , he just keeps adding on conditions that have nothing to do
> with the subject on hand.

That's right - he just adds on crapola that has
nothing to do with anything. I notice several
dudes lately come on here to post "sales" on
radio equipment and such, and no one says
beans about it. Like, you know, hey....it's
no big deal. And it must have been no big
deal to Mackey, too, because the snotball never
said shit about it.

And the way I see it, is if someone really has
a bargain, then the group deserves to know
about it. So that part of his eal is plumb worthless
as mammary glands on a boar hog. And the nerve of
him trying to tie me down so every dungbreath
and his brother can line up to have a shot at me!

Geezus H. Kriste, is Mackey stupid or what?
And the nerve of the idiot to tryto get me to
"get others" in on the deal. Like, ha ha ha,
there was an election and I was empowered to
speak for everyone else.

> Mackey you need to grow up and realize that you cannot
> have everything your way , the deal I suggested was a good one ,
> that you go your way and Bill goes his way.

Hell yes, that was a good one. And I added that
we don't even THINK about each other. Kriste, it
don't get any better than that. I can blot that
sucker outa my mind so far he'll never come back.
And the way he hates me for kicking his ass outa
FidoNet a few years ago, you'd think he'd be glad
to quit thinking about me.

And as for me, I wouldn't walk across the street to pee on 'im if he was on fire. Instead, I'd sit down in the Lotus position and contemplate the gunk in my navel and chant, "Burn baby burn."

So there ain't no good reason for him to not accept my deal.

But he won't. He's a yellow bellied coward......
<shrug>

Two antennas going into one scanner is as
bad or worse than one antenna feeding two
scanners. There are exceptions, like for
co-phased antennas that are mounted just so,
and mated with a "phasing" harness.

So, you really should use a coaxial switch
to select one or the other of the two antennas
so that only one at a time is used. The kind
made for Cable TV are probably okay for scanners,
but you don't want to use the CB Radio kind or
even the ham radio kind unless they carry a
rating for UHF.

Of course, you can always manually disconnect
one and connect the other....but that's usually
a pain in the arse and gets old after a spell.

2728. Re: Exact procedure for resetting scanner??

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: John Habbinga <habbinga@wt.net>
Message-ID: <6mjq7f$3l5$1@news4.wt.net>
Source record: 156017

Follow these steps to reset the scanner.

1. Push VOLUME to turn on the scanner.
2. Press RESET at the rear of the scanner using a pointed object, such as a ball-point pen. If this is not effective, initialize the scanner as directed below. Follow these steps to initialize the scanner.
CAUTION: Initialize the scanner only when you are sure the scanner is not working properly. This procedure clears all information in the scanner's memory.
1. Push VOLUME to turn on the scanner.
2. Press and hold CLEAR. Press RESET at the rear of the scanner using a pointed object such as a ball point pen. Release RESET and then release CLEAR after the display reappears.
NOTE: You must release RESET before releasing CLEAR in order to clear the memory.

Is that detailed enough for you?

2731. ICOM R-10 not receiving very good in Kansas City area

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: al3828@m9.sprynet.com
Message-ID: <358d821b.15186324@news.sprynet.com>
Source record: 156020
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

Hi,

I have problem receiving the National Weather Service signals
with my ICOM R-10. I live in Lawrence KS and I receive weather
information from WXK91 in Topeka broadcasting at 162.475MHz. I set
the receiver in FM mode.
There was a big thunderstorm in my area, so it was a good
opportunity to test the receiver. I drove around town with the SQL
set at minimum. However, I was unable to receive any clean signal.
The noise was so loud that it completely covered the actual speech
signal. Since then I tested it on other frequencies, and found out
that it had no problem receiving local stations (like KANU
91.5MHz(WFM) or police at 158.79MHz(FM)). But once I tried to receive
signals from Kansas City I started having problem. I even had a hard
time picking up radio stations in K.C., and the bandscope showed a
rather weak signal.
Is that the problem with the R-10? Or the antenna is just not
good enough? How should I do to improve the reception quality?

Artur

John you have just proved what I have said and others on the newsgroup have been saying.
You don't want the flaming to stop , if you did you wouldn't be trying to place conditions on Bill for you stopping.

In fact you don't have any right to demand any sort of conditions for you to stop, and your showing all of the newsgroup that Bill and the others are right, your using the newsgroup to carry out a personal vendetta out on Bill.
If you wanted all of the flaming to stop you would just start going on topic and ignore Bill and everyone else.
But you really don't want it stop ,you have made it your lifes ambition to personally destroy Bill.

You have come on here made statements about Bill and have never shown any proof that the statements made were factual or based on any truth.
And you can go or send someone to the San Diego courts record division and I doubt you will find any proof of what you have stated on here.

Now is the time for you to stop the flaming , if and when you get any proof than you can confront Bill with it , if you can find any and I seriously doubt you will.

So John show proof or stop your flaming .

No John , your not being nominated for patrolman of the newsgroup.
The only nomination your eligible for and could win a unanimous vote on would be newsgroup idiot and trouble maker.

Also I know your going to twist this around when you reply , which is stupid on your part as people will see this original message.
In fact that is all you have been able to do as your not making any friends on here is to try and twist other peoples words to suit your needs.

After saying you wanted the flaming to stop and you were offered the deal of a lifetime and you refused because you wanted to put conditions on it that have no bearing with the matter on hand .
This proves you want to keep things going.

I personally would rather see some of Bill's commercial postings than all of the dribble you post saying you want to have a truce and stop the flaming which you never intended to do in the first place.

An entity, purporting to be a sysop, is posting notification of each article he's censoring from his USENET feeds. Jkn@f211.n1000.z52.warpgate.com (Jkn) is apparently censoring messages before they get to his subscribed users. These "Here's another message my users aren't going to read" posts are unnecessary. He can delete whatever he wishes and no-one would be any wiser. That's the rules of the USENET feed game.

But this guy went the extra mile. He's using bandwidth to flout his control fetish; hence these repetitive "here's what *I* think is worthless" posts.

However, he can use bandwidth for whatever he feels is appropriate. That's another rule of the USENET. Too bad his users aren't afforded that same privilege.

I wonder what else ISP Warpgate.com users are not seeing?

Anybody on that ISP?

2757. Cell Phones as scanners?

>

Everything you say tracks with other smart advice I read. But: Do I have to drive this 8 to 10 foot rod vertically into the ground?; or can I dig a trench about foot deep and lay this rod down horizontally?

I was going for a cold water pipe, but I only found a foot of copper outside the house before it coupled into the plastic main feed. No dice there. But if there had been eight or more feet of copper pipe; it would seem that laying the copper rod horizontally below the frostline would be just as effective. Do you think?

The reason I ask, is that we've got clay here. I don't think I can get that rod down vertically with a hammer, it'll probably go down some, but I'm gonna bend the shit out this expensive copper rod before I penetrate more than two feet. And I'm not crazy about digging an 8 foot hole. In fact: I'm flat out not doing it. I dug two foot footers for each of the support posts from my deck. I know *exactly* how much fun that is.

Can I bury the rod horizontally?

John it is not your place to be concerned with it.
The matter is between Bill and Rich Wells and if either one wanted your help they would have asked for it.
You should be concerned how you have made yourself appear in the newsgroup, posting like a chicken little saying I want the flaming to stop and in actuality you are keeping things going by placing conditions on a truce, and trying to validate your flaming by saying your trying to protect Rich Wells from Bill.
The truth is you have lost what little creditability that you may have had in the past and you will never regain it.

You are seen on here as a person with his own agenda , not one that is compatible with the newsgroup as a whole and no before you say it I am not speaking for the whole newsgroup but there have been many of the people on the newsgroup that have stated that your constant flaming is not wanted or appreciated on the newsgroup yet you still continue on and try to twist statments posted by others about you to look like they were commenting about Bill.

It is not working John , all they have to do is look at the original post and they see once again you have stated an untruth because you cannot come up with a valid response and that only shows that the statement made about you was true.

John you are nothing but a self centered lying mental midget and are out of your leauge on this newsgroup , so stop the flaming and get back on topic .

I can't tell you about those frequencies or if Radio Shack has an atomic clock but - 'Atomic Clocks' don't tick. The ones I am familiar with are the Hewlett-Packard Cesium Beam Standards (Sorry - can't recall model numbers). These are very precise generators of 5 MHz. The user must provide a means of using this frequency to drive a clock if that's what you want. At NASA tracking stations this 5 MHz signal is used as a reference for receiver and transmitter LOs and for various test equipment. It also drives a frequency divider with a 1 PPS (One Pulse per Second) output to drive real-time clocks and event timers (it's important to know EXACTLY when a spacecraft will come over your horizon). It's possible that someone would go to the trouble to transmit this 1 PPS 'tick' from a very expensive frequency divider - but I can't imagine why. Do a web search on USNO and TYCHO and you can get a free, accurate, 'Atomic' clock for your home page.

Mackey, here is THE deal of a lifetime for you:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

It's equally binding. I'll never be the first
to break it. If your integrity is worth anything
at all, whaddya got to lose by accepting it?

ANS: You won't be able to attack me anymore, huh?

Now that we have that out in the open.......why not
accept it anyway? That alone will cut the noise
by 50 dB. Let's do a service to humanity, what say,
Smacksie?

I believe the other 30 are a) 20 should be in the highway portion b) and 10 should be in the news and fire portion. Start a search with those buttons and hit hold then use the arrows to step up you should find the missing memory channels. One more note if you try what I tried when I had one I said cool I'll just program those and lockout the rest of the preprogrammed shit, well the scanner only allows so many lockouts, so if you were to lock out too many it would take the lockouts off of the ones you started with. Or you can do what I did I bought the BCT7 which looks exactly like the 700 and it has 100 channel and 800mhz brought it home, put the 700 back in the box and took it back the same day. Yeah I know it's bad but I only paid 25 dollars for the 700 and saw a chance to make out.....I apologize to the unfortunate individual who got the 700 in the 7 box.

>"Copy that. The cat is in the litter box."
>
>I really doubt they were surveilling a kitty.

I heard this exchange between a seargeant and one of his
officers under him-

sarge: "23 to 3"

officer: "3 responding, hold on a second, I got a cluster!"

sarge: "3, what the hell is a cluster?"

(long pause(

sarge: "answer my question- whats a cluster???!!"

officer: "you know, when you have too many things going on at once!"

I also like it when some guy sits on his microphone and you hear the
person on the base (dispatcher) hollering "someones got an open mic"
like the poor bastard thats keyed down is going to hear it!

Other cop isms- the cops always talk too damn soft, then whenever a
chase or something happens they're always overdeviated and near
unintelligible- if it wasnt for the motorolas(built in cop coping
circuitry), nobody would hear them!

I have had a BCT-7 - a BCT-10 - and a
BCT-12..... The BCT-10 was terrible !!!
The BCT-7 gets too many false alarms
(being a double conversion radio, it would
set off the alarm every time the local ham
repeater keyed up) altho its nice in the
respect that its somewhat programable.

I can not say enough GOOD thing about the
BCT-12 however..... it is a GREAT little
radio..... even has good sound for being
so darn small (the size of a radar detector)

Actually..... I run both the BCT-7 and the
BCT-12 in my car. I just disabled the
"beartracker" alarm in the BCT-7. Uniden
will tell you it can't be done (disarm the
alarm) but all you have to do is lockout
the extender frequencies.

2787. Re: 6 volt audio amp kit or module?

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: grohe@galaxy.nsc.com
Message-ID: <358cde69.18050986@139.187.81.1>
Source record: 156086

On Sun, 21 Jun 1998 02:40:13 GMT,
in the newsgroup rec.radio.scanner,
acohn@oregon.uoregon.edu (cohn)
from University of Oregon, Eugene thoughtfully posted:

> I have a howl and distortion when the gain is
> turned at all up in my RS CB-60 analog UHF-VHF. I replaced the audio
> amplifier IC with no improvement so would like to bypass it with a
> high gain amp kit or module but am having trouble finding a 6 volt
> one.

What happens if you use an external speaker?

Some of those models had problems with microphonics. My "CB-9"
will "howl" if the volume is turned up on the VHF band. Replacing
the amplifier won't solve this, as it is a mechanical problem.

BTW: "Microphonics" is the phenomenon where the vibrations of the
speaker cause the local-oscillator coils to vibrate, causing the
frequency to shift slightly ("FM"). This "modulation" is then
detected and sent to the speaker, and the whole process starts
all over again (mechanical feedback).

While it is "howling", try tapping on the case. If you can hear
the "thumping" in the audio, then it is microphonic.

Try using a chop stick, or the eraser-end of a pencil, and tap
around the circuit board to find the "sweet spot". Most likely it
will be most sensitive around coils near the tuning cap.

All the LO coils should be covered in bee's wax by the factory.
Perhaps the "wax" has dried up or has been removed. If it has
been removed, try dripping some candle wax on any exposed coils.
Don't move or modify any of the coils, as you will change the
alignment of the radio.

If you are adamant about replacing the amplifier, the "good `ole"
LM386 would be ideal. It is available from Radio Shack.

http://www.national.com/ds/LM/LM386.pdf

Good Luck,
Paul Grohe

2789. NEW POCSAG DECODER FEATURE SUMMARY

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: Andrew Umney <andrew@commtech.com.au>
Message-ID: <01bd9bf2$0e70b420$360000c0@andrew>
Source record: 156088
Cross-posted to: alt.radio.scanner,rec.radio.scanner,tnn.comm.pager

Many thanks to all those people who contributed to my initial posting regarding the new POCSAG decoder software. The suggestions are greatly appreciated and I will hopefully be posting the first beta release at some stage over the weekend.

Most of the suggestions have / are currently being implemented. I needed to cull out the application specific suggestions, it all comes down to trying to please 95% of the people and I really need to create the features that will be most beneficial (some of these suggestions include re-encoding POCSAG as an output, encoding it into TAP and then sending out multiple paging messages etc). Please feel free to make these suggestions as they will eventually be implemented, just not in the first release.

Current Status of project is as follows;

Operates under a DOS platform and acquires data from the serial ports DTR line. This platform was chosen since it allows low end PC's to decode POCSAG - you do not want a Pentium 400MMX sitting there decoding POCSAG !

The software supports up to 10 simultaneous POCSAG inputs. I think that it would be very rare for a wide area paging company to support more than 10 frequencies in one city. Wide Area Paging in westen countries budgets about 30,000 alpha subscribers at 1200 bps per frequency (this gives us 300,000 subscribers) and about 2% market penetration (i.e the software should be able to support a city of 15,000,000 people) - numeric paging gets about 90,000 per channel.

Messages are displayed in real time at the base of the screen to give you a live stream of messages.

Each receivers can have it's own set of keywords and cap codes to search for. '?' may be used as wildcards. For example if you specify a cap code of ??????? then you will receive every message. If you specify 123???? then the cap codes must have 123 as the first 3 digits. You may specify up to 100 of these search parameters.

Statistics has been the main focus, escpically for paging carriers. Some of the statistics (on a per channel basis) include; Frame utilization (tells you what percantage of the traffic is address, message and idle codewords), POCSAG efficiency - this tells us if we need to increase our batching time on the POCSAG output, the frame utilizations tells us that we should allocate cap codes within certain frames to even out our paging traffic, type of paging traffic per channel (alpha, numeric & tone). Now we don't really know the difference between alpha and numeric so we make an educated guess.

All messages (that meet the filter requirements) are logged to the hard disk in comma delimated ASCII, should be easy enough for everyone.

Thats about it for now, please keep the suggestions coming.

Nathan Buzza

How many meters does it have now. Would adding more meters allow you
to readout more information at the same time and would that help?

:513 - 805

Even the cheapest scanners cover 66 to 88 MHz because that is the
low VHF commercial band.

:Are these freqs just costly to implement on a scanner?
:Are these freqs used for something we're not supposed to hear?
:Are these freqs modulated in some way other than AM/NFM/WFM?
:
:I know that ICOM and others can cover these freqs, but Uniden/RS
:models always seem to leave them out. Is there any value in tuning
:these freqs for the average scanning enthusiast?

Police still use 78 and 79 MHz in some areas. 66 to 88 MHz is still
used extensivly for commercial services.

:Just curious & learning ...

2799. For Sale: RS Pro-2030

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: Brian <brian_usenet@cizone.com>
Message-ID: <6k8j1.27$S2.1180205@news.en.com>
Source record: 156098

I'm selling an 80 channel (8 banks, 10 channels each + 10 temp. monitor channels) Radio Shack Pro-2030 base scanner (unmodified). It covers 29.7-54, 108-174, 380-512, 806-823.9375, 851-868.9375, and 896.1125-956 MHz. Includes the original box and manual. Excellent condition (not exposed to smoke), with the exception of a broken-off upper portion of the 3-unit telescoping antenna. This doesn't noticeably affect reception on almost all frequencies, and can easily be replaced with a low-cost replacement whip antenna or an external antenna. Scans at 50 channels/second.

Price: $160 US (I pay for shipping).

Email brian@cizone.com if interested.

Well, now that would be nice. They drag and
dredge the rivers every now and again, but
they don't break up foundations all that
often. I agree, a foundation would be a very
nice opportunity for the lad.

He'd be a great support that way.

I think today's scanners will be obsolete in seven
years for a variety of reasons. Just look at 'em
from seven years ago, fer Pete's Sake!

But there is a Catch-22. Seven years from now, the
government may have legislated scanners to oblivion.

That, and with more and more services moving their
communications needs to satellite, digital, cellular,
PCS, and such, there will be less and less to
monitor. Maybe a few old baby monitors.....

Not in the USA. Our VHF-Lo band is 30-50 MHz.
You must be in Australia..... but, yes, transpose
the two bands, depending on your location, and
the effect or result is still the same.

Although in my city it is illegal to have a scanner in the car, it is not enforced. I have one anyway, and I use it to stay out of the way of the fire trucks and ambulances. I would reckon that on the average, maybe twice a week I'm able to avoid a trouble spot because I've heard the fire call. I know about where all the stations are, and if I hear a call for station 6, I know they will be coming down the street in front of the house, so I go around the block.

Why? You must have chosen to read it?
I mean, nobodu forced you, right?

> I've run into about 3 or 4 threads of useful
> discussion on the group. The rest is about
> cheek and/or mackey.

Ohhhh, then your ISP's news server must not be
very good. There are lots of good threads here.
If your ISP doesn't provide them, you need to
lodge a complain there. Not here.

> The exchange of rhetoric and bullshit between
> them accounts for 85% of the posts in the newsgroup?

Well, it fluctuates actually. Kind of like the
stock market. Mackey gets weirded out at certain
times of the month, and fantasizes about being
some kind of a Great Messiah to the newsgroups.
He makes confessions; sobers up; retracts the
confessions; and then hurls invectives around.

He's a lot like a housefly. You know, eats
manure and bothers people.......

> Why don't they just get their own newsgroup
> called "rec.flamewar.with.cheek.and.mackey" or
> better yet they should just whine at each other by
> email and stay the fuck off usenet!!!

I don't know why they don't do that. You'll
have to ask each one, individually. I'm sure
there are a variety of reasons. In my case, I

have Mackey filtered out at my e-mail server.
He talks and acts differently in e-mail as
opposed to the public forums....and then lies
about it.....so any interaction I have with him
has to be in public so he can't lie and make up
stories about it.

Ferinstance, he used to hit on me big time by
e-mail with all kinds of lewd and perverted
propositions....but in the newsgroups, he denies
being a pervert. He even got drunk the other day
and bared his soul and 'fessed up to some real
perverted stuff. Then he sobered up and retracted
it. It's best the public see him for what he is.

YOU try rapping with him by e-mail and see for
yourself.

> Now, back to scanners..... Who here owns
> ratshack #20-014... I'm scraping up some change
> to put one up.... how does this badboy work
> in different bands?

It's good for the popular scanner bands. It isn't
good for flat coverage of 25 - 1300 MHz. It has
peaks for 30-50 MHz, 108-178 MHz, 400-512 MHz,
and maybe one for 800 MHz. Within those bands,
it will work fine.

<shudder> Hey, Joe, nothing against these BBS's
as they're probably the best of the bunch that's
still left around, but <shudder> BBS's are now
like 2-holer outhouses in the winter with a
Rears & Sawbuck catalog and a bucketful of last
year's corncobs.....compared to a nice warm
modern 2 bathroom with padded seats and Scott tissue.

Before I shut down my BBS over a year ago, it
got to where I couldn't stand to log onto it.
And I liked mine better than any others.....

<groan> BBS's definitely served their purpose and
held their own for many years. Hell, they were
the ONLY way for a long time to be a part of an
on-line community. But now? <shudder> <g>

You don't suppose either of the above BBS's support
TELNET access, do you? Now that might be a passable
compromise for the hard core Internetters nowadays.

Gawd, Joe, I'd have to scrounge around here to even
find a modem....and no telling what's set up
housekeeping in it, if I found one.

The PA State Police aka PSP were to move to a combined Astro digital system.
This system is under review due to the HIGH COST of such a system, in excess of
the $185 MILLION budgeted.

Plans call for either moving to standard analog 800MHz TRS, or more likely, an
improvement in the present systems.

Detailed PA State frequency utilization can be found on my web page, URL below.

'Bout time the public gets wise to the waste and inefficiency of these systems. Not to mention the obvious intention of public service agencies trying to hide their activities from those who pay their salaries. Josef Stalin would have loved such an arrangement.

True Bill, but in the hinterland, we may still have a thing or two to
listen to on our moldy scanners...
I notice that once 95% of Illinois left 39.5, Ford County (not a big or
```

rich sheriff's dept.) stayed on it, because withoout everybody in the state using it, it works a bunch better than any million dollar trunking system... Indiana still has a ton of traffic on the ancient 154.830/155.370 mobile/base split freq. combo. Got some skip in the other night and listened to a storm go clean across the state on those two channels...
Old low tech stuff will hang on for ESDAs & volunteer fire depts. for a long time too. As the bands become less crowded, the comms will become better for those left with "obsolete junk". Wide open spaces & not much money to spend will leave some bones for us to pick over for a long time to come......Granted you live in a high-tech salesman's heaven there, with probably every little burg looking to outshine LAPD for neat toys. Which is cool, but not universal.

I don't mean to be a grouch.....but the application POCFLEX has already been released, and it supports most of these features listed PLUS it decodes the Flex paging protocol using a standard hamcom interface

Since most paging networks are quickly migrating away from POCSAG......why solely develop for it? How about buidling upon the initial Flex decoding application!!!

See http://www.geocities.com/CapeCanaveral/Launchpad/4039/ for more information on the POCFLEX decoding application.

Try subscribing to TRUNKCOM and asking your questions there. You'll have a better chance of having someone who actually knows something giving you an answer, and the flame wars are not permitted there.

As for your immediate problem, you're reading the hex code backwards. The 7 is the block number, and the 1 is the status bit (group, emergency, patch, etc.). When you first figure out the identity of a Group, you use the "G" key to enter whatever hex ID is showing and set the name of the group. Afterward, when you identify individual units within that Group, use the "I" key to enter the hex ID and set the identity of that unit. This does not change the Group information that you have programmed already.

2828. BC210 resistor value?

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: adam@panix.com
Message-ID: <6mjfdn$o0t@panix3.panix.com>
Source record: 156127

I'm trying to repair a Bearcat 210 which has no audio output. I've traced the problem back to an open resistor but unfortunately it's toasted beyond the point where I can read the value. With the radio face forward and upside down (i.e the component side of the board face up), the resistor is located on the left rear edge of the board, between the external speaker RCA connector and a 22 uF capacitor. The resistor appears to be labeled ECB on the PC board. Can anybody tell me the value of this resistor?

The PC board is labeled as follows:

(C) 1976
ELECTRA CO
PC-60-V0

-and-

BD2210U

-Thanx

A while back, someone posted a message (or was it on the pcr-1000@qth.net mail list?) saying they had successfully removed the EEPROM, made a copy of it, put the copy in the radio, and it worked fine. Anyone out there got capability to make a copy of the X24C01A EEPROM chip for a small fee? If so, email me... I'd love to have mine backed up to a couple of spare EEPROMs so I could experiment with it and not worry about having to send it back to Icom again...

I own an old EPROM burner, but it does not appear to support the X24C01A chip...

Any saints out there? <smile>

2831. FOR SALE: Uniden Bearcat BCT-7 Highway Patrol Scanner

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: lordviper@bigfoot.com
Message-ID: <358d508d.326004@news2.new-york.net>
Source record: 156130

This is a fully loaded scanner that covers all (legal) frequencies including 800 mhz and Aircracft. Still in the original packaging and with all the accessories.

Here is a summary:

Highway Patrol Alert
Highway Patrol Scan
Local/County Police Scan
DOT, News & Fire Scan
CB Monitor & Weather Scan
12 Bands with 800 MHz
100 User-Prog. Channels
One-Touch Band Search
AC/DC Operation
Mobile Mounting Kit

Features:

Highway Patrol Alert - Alerts you when you are within 3 miles of a highway patrol unit using a mobile extender.

12 Band Coverage - Including 800 MHz, all public service bands, "Ham" Bands, Federal and Military Land Mobile Bands plus Aircraft and Weather Channel.

100 Channels - Program to your choice of frequencies.

Turbo Scan - This lightning-fast technology enables the BCT-7 to scan and search nearly 100 channels or steps per second. The BCT-7 scans about five times faster than any standard scanner sold in the United States.

LCD Display - Nine digits LCD with back light display for night visibility.

Private Channels - With just the touch of a button you can automatically scan 25 programmed private channels.

Highway Patrol & Police Channels - Automatically scans highway patrol and police channels and your choice of 25 programmed channels.

Fire/News Channels - Automatically scans fire, emergency and news channels and your choice of 15 programmed channels.

State-By-State Scanning - Use the state key to select the two letter abbreviation for the state you are traveling in and the BCT-7 will start scanning the highway patrol frequencies

stored for that state.

WX Channels - Automatically scans all NOAA weather channels and 2 canadian coast guard channels.

Protection - Helps to advise you against all forms of speed measurement including Radar, VASCAR, Airplane, Clocking and Laser.

Lockout Channels - This feature allows you to skip channels you don't want to hear (works for PRIVATE, POLICE, FIRE/EMG, HWY, DOT, FIRE and NEWS channels).

Band Search - The BCT-7 can scan almost 30,000 frequencies and has 12 separate band search capabilities and CB channels (1-40).

Mute - Provides audio mute function when others in vehicle do not want to be disturbed.

Memory Protection - The BCT-7 comes with a memory back-up system that remembers your state selection, frequency selections and deletions

Accessories - Includes DC cord, mounting kit, cigarette lighter plug, mobile antenna, AC adapter, telescopic antenna and a Frequency Starter Guide.

This is an amazing scanner but i don't really need it. It is brand new and has never been used. Make me an offer ($100 at least) and the top one will get it. I will cover shipping!

> Can a Pro 43 be modified to recieve on the millitary band block?

No. It already receives Mil-Air, 220-512 MHz, continuous.
So celebrate!

> How about 220mhz?

220-MHz and up, it already gets....stock. The ONLY
freq mods for the PRO-43, date code 3A4 and prior,
are cellular and 66-88 MHz. And shortwave, from about
8 MHz to 30 MHz.

Hmmmm. YOU must have nothing better to do
than kibitz and blow Bronx cheers....

> you are also wasting other subscriber's time

How? Subscribers might waste their own time.
There is no way on earth you can waste mine
unless I LET you. So you must LET others waste
yours, I guess. They sure can't force it on you.

> by having to wade through
> all your ranting and raving about nothing.

Oh that? That's YOUR choice, pal. You don't have
to wade through anything you don't want. Learn how
to use your own computer and to become master of
your own domain, and then you will be in full control
and not UNDER control by others.

Of course, if you WANT to be a puppet, that's okay,
too. It is a free country here. You can choose
to control or BE controlled. No one cares either
way, so do what you want.

> GROW UP!!!!!!!!

Yes, you should. It starts with learning how to
control your own computer so that it doesn't
bite you on the arse when you're not looking. I'd
kick the living shit outa my computer if it did to
me what yours does to you.

Whoooooeeeeey, that'd make me downright mad. But take it out on your computer where the blame rests; not on poor little Mackey or me. That computer of yours just ain't behaving right and apparently it done bit you on the butt, so don't put up with that. Beat the tar out of it and make it behave,

Y'hear?

I have no interest in listening to cordless phones, so I haven't heard
that sound. Since you describe it as "Donald Duck" I suspect that it
is a single-sideband suppressed carrier signal or possibly ACSB.

> using it, it works a bunch better than any million dollar trunking system...

I have no doubt you're right. Good thing
for solid state radios now....that can
last a long time as opposed to the vacuum
tube rigs that have a definite lifespan.

So since the equipment will last a long
time now, I'm sure uses for it will be found
and passed along to the highest bidders at
first, and then maybe around the swap meets
and hamfests. So, yeah, you're right for
the situation out in the boondocks and tulies.

And....to some extent, in the Big City, but
here, people gotta keep up with the Joneses
and so there won't be a lot coming down on
39.5 MHz or its equivalents. Some, I'm sure.
But enough to support a hobby?

And that's the part that will affect you guys
out there in the sticks. Uniden and Radio
Schloque will not manufacture radios for your
market....it's too small. A minimum production

run at Uniden used to be 5,000 units, but I think
it's 20,000 now. Even so, guess how far 5,000
units of something would stretch around Rural
America, much less 20,000.

5,000 could be snarfed up in one Big City, but
it could take many states of Rural America to
eat 5,000 somethings. So THAT is your problem,
more than what there is to monitor.

> Indiana still has a ton of traffic on the ancient 154.830/155.370

So you'll pretty well be forced to use old scanners,
too. (Old by then) Which should be no skin off
your nose for the most part, but you'll be in an
ever decreasing minority of hobbyists more than likely.

But like Hank Williams Jr. sings:

"A country boy can survive."

You'll survive. We in the megapolis might not.

Hello everyone,

For scanner listeners in the Dallas Ft Worth Metroplex, a new incident notification network has been put into place using ICQ. We could consider this the first step to getting true incident notifcation started for the DFW area. . See http://members.tripod.com/~B_Adair/ for information on who is on the list so far, and how to add you self (It takes about 5 minutes, and is FREE)

Hope to see you there

Dan:

At Communications Electronics, Emergency Operations Center, (CEI) we take great pains to make our advertising not only honest, but clear and straightforward. For that reason, I was particularly distressed to learn that you feel our web site at http://www.usascan.com in the order section regarding our shipping, handling and insurance charges misled you.

Let me assure you that we do not want to mislead any of our customers. That's not a good way to do business, and it certainly is not the way we have done business for almost 30 years. Because of our added services and benefits at CEI, our shipping/handling will indeed be higher than most dealers. To inform our clients how much to remit, we clearly print
our prices and shipping/handling charges in our ads and our web site.

Please remember that we primarily function as an Emergency Operations Center. Just like most people would not visit the emergency room of a hospital to get a Band-aid, most people do not come to us to get a scanner. They usually go to their Uniden dealer nearest them.

For many reasons, different companies have different pricing policies. It would be impossible for me to speak about other companies shipping and restocking policies so I won't. I can however, tell you about the shipping/handling and insurance policy at our organization, Communications Electronics Inc. (CEI) where I work.
CEI has different divisions of our organization that distribute Trunk Tracker scanners the largest users being our Emergency Operations Center, Dealer Products Group and Government Products Division.

As an Emergency Operations Center, our number one priority is keeping government mission critical communications systems on line all the time. When a government agency suffers damage from a man-made or natural disaster, since CEI serves the people who serve the people, our highest priority is to restore the damaged infrastructure. To provide 24 hour arond-the-clock service to government agencies, our costs are passed back to our clients. However, as an accommodation to non-government customers who want to purchase items through our Emergency Operations Center, our EOC has an outreach program to serve customers worldwide that can not be serviced by a local dealer.

For almost 30 years, to accomplish this mission we have found it necessary to stockpile massive quantities of inventory. For example, last year, during a phase II FEMA inspection of our facility during an Urban Search & Rescue task force sponsorship evaluation, FEMA inspected our inventory for mission readiness. The cost for our building alone with specialized facility power and phone system was over one million. Our on hand inventory has significant warehousing costs. As an example, assuming a 10% annual return on investment, it cost us approximately $100,000 per million dollars of inventory stored in our distribution center. To serve our clients properly, we are required to carry an extensive inventory. In our organization, this cost is passed along to our customers

and clients. When we need a new or critical item, our staff have traveled anywhere to a manufacturers location to pickup inventory. I've earned over three million frequent flyer miles procuring inventory. For most of our government customers, our flat shipping/handling/insurance charge of $18.00 per radio for ground shipping or $36.00 for 2nd day air shipping in the continental USA seemed to be a break-even proposition. I agree our $36.00 flat charge for air shipping could be a burden for a consumer.

We purchase so much equipment, that CEI is a Master Distributor for companies such as Uniden, Cobra and others. Our non-government customers have requested to purchase radio equipment from us to accommodate those needs we set up focus groups to determine what our customers wanted. Many customers told us they wanted a liberal return policy, most items in stock, most credit cards accepted, toll-free phone lines. As we added more and more benefits, the costs for staffing and facilities costs have increased which was passed on to customers. For example, our 61 day return policy instead of a 15-25% restocking fee increases our operational costs overall but this is what most of our customers wanted. On the other hand, our procurement costs for equipment because of our volume purchasing saves us money and these savings are passed on to you. Hopefully this explains why the cost for some items from us are lower than average while shipping/handling is higher than average. I'm told our total cost including shipping is in some cases lower than purchasing from a local dealer. This is probably why customers tell us they save saved as much as $50.00 per radio even after the shipping charge is included when purchasing from CEI.

As a Uniden Master Distributor, it is our responsibility to make sure you get the Uniden product you want when you need it. If shipping/handling/insurance charges on Uniden Trunk tracker products are a concern, we encourage you to shop at your local Uniden retailer in your area. To assist you in finding a local Uniden retailer, Uniden has a retail locator available anytime by calling 1-800-297-1023 and following the voice prompts. While we encourage our dealers to stock over 110 different Uniden items including the Bearcat 235XLT, Bearcat 895XLT trunk tracker scanners, and other communications products, most dealers only will only stock a few items.

Unfortunately most dealers do not make enough profit and go out of business within three years. When a dealer goes out of business it is a sad day for us as all of our time and effort of training their staff and the relationship we have built up over the years is lost. In addition, many customers are disappointed. When Gilfer short-wave and Electronic Equipment Bank (EEB) stopped serving the public this year, their customers were sad. I have spoken with hundreds of their former customers, as we have acquired Gilfer's old phone numbers 1-800-GILFER1 as well as EEB's old number 1-800-368-3270.

If you think you can do a better job and want to become dealer selling our products, we welcome new dealers. We feel it serves our customers better when they can get our products locally. If you want to try and are willing to purchase $2,000 of product per order as a dealer, register your company with your state or county, get a tax ID number and
call me at 1-800-USA-SCAN to discuss a dealership.

Please remember, we are not a conventional dealer. We are a master distributor and an Emergency Operations Center. As such, to satisfy the emergency needs of our clients, our overhead in operating this facility is significantly higher than our dealers. This is why we
recommend you support and shop and your local Uniden dealer near you.

I'm told, next weekend, we should have a crowd of amateur radio operators operating radios during field day at our two-acre Emergency Operations Center facility in Ann Arbor, Michigan.
If you are in the neighborhood, please stop by so you may appreciate the scope of our operations.

We are always interested in reducing the overall cost of our operations as long as we are not sacrificing emergency response time or service to our clients. If you have any suggestions where we can save our clients money through a reduction in operational costs, we are interested in your suggestions. We listen to our customers and act on what you tell us. After looking at our web site, if you have suggestions to share with us, please don't keep it yourself. Let me know how we can serve you better. We are updating our web site survey section at this time so please send E-mail instead of using the survey.

As this discussion of shipping is drifting off the subject of scanning and more towards retail
management,
so as not to waste bandwidth, feel free to E-mail or phone. I hope I have answered your questions regarding our Trunk tracker and shipping pricing policy. If it doesn't, please call me at 1-800-USA-SCAN or send me an E-mail at cei@mediaone.net.

No deal MACKEY. You just leave a defeated shell of a
woman.

Conditions:
1) You get down on your hands and knees and beg
for forgiveness from Bill.
2) If Bill gives it to you (I hope he kicks you in the face)
you leave the NG for a period of 20 years.
3) When you come back you will refer to Bill as BOSSMAN
or SIR at all times never disrespecting him again.

No one believes you want a truce MACKEY. You must have
all of your mindless PARG faggot puppets helping you answer
all of your hatemail. Boy... must be some kind of butt-fucking
party going on at those meetings. Circle jerks on Fridays huh
MACKEY. How Disgusting.

On the BC210 I inspected, this is R66, a 270 ohm, 1/4 watt, 5%
resistor. The markings are red/violet/brown, with a gold
band which signifies 5% tolerance.

Good luck.

This works for me: My ubc 3000 came with the leather case. I use a small speaker in a plastic enclosure. Attached a 1 1/2' x 3" strip of velcro between the two. Fuzzy strip on the leather case. You can even adjust the tilt angle to aid in viewing the display as needed. Jim

2864. Why the scanning hobby is getting a bad name

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: Frustrated <nunya@nunya.com>
Message-ID: <JDYi1.5889$DM1.3327467@news2.mco.bellsouth.net>
Source record: 156163
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hello All,

I bet Many of you are wondering why people do not trust the scanner
hobbyist?

Why are so Many Public Safety Agencies signing up with Astro?

Why does Congress feel it neccesary to crack down on the Hobby?

I have been pondering these questions for a while and couldn't nail down the
answer, well I think it is clear now. (at least from my point of view as a
member of the Public safety community and a scannist.)

I occured to me that ones behavior on the newsgroups and how they interact
with one another in this NG reflect how they probably behave in the real
world or at least this is the appearance.

The constant flaming,name calling, and blame placing are not doing the hobby
any good at all, I mean say one public officials aid or secretary was given
the task to do some research on scanner listeners and of course they would
come to the internet. and then to the 2 scanner newsgroups, gee it does not
take a rocket scientist to figure out what kind of impression they would get
with the current situation.

Now after this post I bet the Most guilty and childish offenders will start
placing the blame on each other

example: well it's party a's fault if he would stop calling me names i would
quit flaming him! (This sounds just like kindergarten)
Just listen to it and if you all have any dignity and care for the scanner
hobby then you all will behave yourselves

The future of the scanning hobby depends on it
i mean if everything goes to digital then what good is a scanner
if a scanner becomes illegal then what?

we are all adults here lets start acting like it

Yet another off topic post by Billy.

Your looking for attention and will try anything to get it. If it means posting some false Subject Header to cause others to read your posts you'll do it.

Yeah yeah we know... your the innocent guy, the world is out to get Billy.

Is this what happens when a tech "wanna be" writes a book on some obsolete scanner, publishes a picture of his old bag by his CB radios and can no longer find a way to make a buck turns into?

Billy you really have to find something to do with your time.

Its a shame when idiots like you insist on only taking away from this newsgroup.

2883. 6 volt audio amp kit or module?

Newsgroup: rec.radio.scanner
Date: 1998-06-21 00:00:00 UTC
From: acohn@oregon.uoregon.edu
Message-ID: <358c714d.1522022@news.uoregon.edu>
Source record: 156182

I have a howl and distortion when the gain is
turned at all up in my RS CB-60 analog UHF-VHF. I replaced the audio
amplifier IC with no improvement so would like to bypass it with a
high gain amp kit or module but am having trouble finding a 6 volt
one.

Any suggestions would be appreciated

The most interesting undercover cop phrase i've heard so far is...

"The cat is in the litter box."

A few officers had to confirm this...

"Copy that. The cat is in the litter box."

I really doubt they were surveilling a kitty.

2892. Re: Fairly important question about >>>BC700A

I owned one of these funky little units awhile back ... there are an additional 20 storage channels in the POLICE section and an additional 10 in the FIRE section which adds up to 50 - there aren't any 700's with different channel configurations as far as I know...

I was impressed with the audio on this tiny unit and would have liked it a lot more if they just would have put all 50 channels in the private section...oh well

John , worry about yourself, the others can take care of themselves.
You show everyone on here that you are sincere in your efforts for the flaming to stop.
Just go back on topic and the flames will go away like they did before and then the whole newsgroup will back to normal.

To do that you have to stop replying and trying to place conditions on what others do , number one you can't do that , number two it is not your place to do so, now please do what you have asked others to do and stop the flaming .

That is not the only reason the goverment is cracking down, But I would have to agree with you on that too, but as a firefighter we have problems and I have noticed that on some Firefighter newsgroups they have the same problem. I am a scanner hoddiest and an ham radio operator. But some scanner chasers get in the way of a fire scene, its ok to goto a emergency scene as long as you are not in there way. And we see that alot and a friend of mine who writes for a scanner digest have an article about that. But there is my .05 cent worth.And I do not have any thing against scanner hoddiest because I am one.

Well, you're not a dumbass, and you don't have
to use filters. Like I said, you can tell by
the thread name whether or not it has interest.
The Mackey threads are well identified....so
don't even download 'em, or if you do, don't
read 'em. You can go by author, too. Mackey
NEVER talks scanners. He does talk shit, though.

> Why should I have to figure out how to filter
> anybody out of a newsgroup in which I am inreresting?

Well.....it is your computer, right? But the
newsgroups are a public medium. Anyone can
write anything. That's why you should figure
out "filtration"....or, in the alternative, get
good at recognizing the kinds of threads that
interest you and the ones that don't.

> I look at all the synopses and decide which to expand.

Are you dense? Or just stupid? I told
you before you have NOTHING to offer me.
You have nothing I want. The ONLY possibility
is the following:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

See if you can get a grip.

You don't offer me anything, dipstick. You
have nothing I want.

Here is the ONLY possibility of something
that might work:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

Take it or leave it.

You must be an idiot savant. You don't
"offer" me anything. I wouldn't want your
money if you won the Lottery. The ONLY
possible deal is:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

That is as good as it gets.

You remind me of a pissant floating down the
Mississippi River on his back with an erection,
hollering, "Raise the bridge, raise the bridge."

You nescient colon polyp, you need to redeem
yourself to me. The ONLY redemption possible
is to address me as "Sir" one time as you agree
to abide the following:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

That's it, polyp. It don't get any better than
that.
```

Drug peddlers shouldn't be merchandizing
their wares to our kids, either.

And YES, you SHOULD have to use a filter
if you don't want to pull in everything that
appears in a newsgroup. THAT's what filters
are for.

Geezus, man, they put rating codes on movies
so parents can "filter" them for the kids. Web
sites are getting rating codes now, too.

Learn how to use your computer and be master
of your own domain. That is as good as it gets.

Here's the walk, Smeggie:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

That is all there needs to be. As soon as you
and I don't exist to each other, the rest of the
world will be just fine. You leave everyone else
out of it. You came here a couple of years ago
looking for ME and you've been here pulling your
shit ever since.

So deal with ME....and the rest of the world
will just fall into place...click, click, click.

Leave everyone else out of it, Mackey. You
are the origin of the problems and I am and
always have been your target.

So let's thee and me do the dealing, see?

> flaming & trouble making & participate in the agreement!

No, turdbreath, here is the ONLY workable plan
for peace and a relatively trouble-free newsgroup:

1. You don't talk to me. I don't talk to you.
2. You don't talk about me. I don't talk about you.
3. You don't make references or insinuations about me.
I don't make references or insinuations about you.
4. You don't even THINK about me.
I don't even THINK about you.

Simple, Mackey. Acknowledge it. Meditate on it.
Deal with it. Accept it.

Right. So do most of the rest of us.

The guy who answered you just before me,
JOHN MACKEY, is not here for scanners. He
is not at all interested in scanners and
scanning. Not only that, but he has been
here wreaking havoc and fomenting dissent
for the better part of three years.

Now he's playing the goody-two-shoe game.
He sees you as new here, so he hopped up on
the bandwagon with this "we" and "us" shit.

Rest assured, he speaks for no one but his
own sorry self. Wanna know the truth; the
full truth; and nothing but the truth? Check
his track record on Dejanews using keywords
of MACKEY and KA0SSF.

You'll see.

Meanwhile, just stick to the obvious scanner
and radio threads if that's what you're here
for. The flames and Mackey's crap are largely
confined to the obvious threads that can be
easily avoided.

Good luck.

Hi -- I'll make this brief :-)

I'll be driving down to Florida from Long Island next month and was wondering if you could e-mail me with Key freqs that I need. I'll be taking the I-95 corridor. I've been through it numerous times, but not with freqs. I'll be going through NY, NJ, DE, MD, Wash DC, VA, NC, SC, GA, and of course FL.

If anybody has primary freqs, please e-mail me. Appreciation in advance.

>snip BS<
>i know bill cheeks from about 10 or 15 years ago in colorado, back when
>he started to modify scanners and cb radios.
>snip more BS<

Look, I don't pretend Bill is the most lovable human being on this or any other NG. I don't even agree with him on technical stuff all the time (let alone some of the rest of what he posts), but I'll be interested in his opinion on anything that has to do with scanners because he does know more about them that I ever will. You have to respect what he has done for the hobby, getting books published & documenting a very specialized and arcane branch of a small and cutthroat band of guys who'd walk a mile for a 2% discount from a stranger rather than pay list price for ANYTHING. So he ain't Santa Claus, telling everything he knows for free and he ain't Dale Carnegy spreading sweetness light and sunshine into everybody's day.
I see vague accusations from years ago, from a guy who doesn't know where the SHIFT key is on his keyboard & doesn't even know how to spell Bill's name. Such credibility, such documentation.
Everybody who ever got laughed at in roumors spread by their competition, had a wife leave or blew up a satellite dish 15 years ago (hell in those days half of them burst into flames the first time you plugged them in out of the box anyway!) makes an awfully big club. I wasn't aware any of those things were grounds for permanent harassment by a bunch of people who can't spell, can't puctuate and can't dispute anything he says that's on-subject here.
When you get a book out Clarence, let me know when I can go to Barnes & Noble and look it over. If you can put a book there that shows me you're smarter than Bill, I'll come here and say so.

Source record: 155820

Do not connect any grounds to a gas pipe, it is against fire and
electical codes in all states.

Lightning is the discharge produced when differences between ground and
atmospheric electrical charge are large enough (several hundred million
volts) to overcome the insulating effect of the air.

Lightning strokes can occur within a cloud, between clouds or between
clouds and the ground.
An average thunderstorm can release several hundred megawatts of
electrical power.

Grounding Electrode System

Where none of the electrodes specified in Section 250-81 is available,
one or more of the electrodes
specified in (b) through (d) below shall be used. Where practicable,
made electrodes shall be embedded below permanent moisture level.
Made electrodes shall be free from nonconductive coatings, such as
paint or enamel.
Where more than one electrode is used, each electrode of one
grounding system (including that used for lightning rods) shall not be
less than 6 ft (1.83 m) from any other electrode of another grounding
system.
Two or more grounding electrodes that are effectivelybonded together
shall be considered a single grounding electrode system.

(a) Metal Underground Gas Piping System. A metal underground gas
piping system shall not be used as a grounding electrode.

(b) Other Local Metal Underground Systems or Structures. Other local
metal underground systems or structures, such as piping systems and
underground tanks.

(c) Rod and Pipe Electrodes. Rod and pipe electrodes shall not be less
than 8 ft (2.44 m) in length, shall consist of the following materials,
and shall be installed in the following manner:

(1) Electrodes of pipe or conduit shall not be smaller than 3/4-in.
trade size and, where of iron or steel, shall have the outer surface
galvanized or otherwise metal-coated for corrosion protection.

(2) Electrodes of rods of iron or steel shall be at least 5/8 in. (15.87
mm)in diameter. Stainless steel rods less than 5/8 in. (15.87 mm) in
diameter,nonferrous rods, or their equivalent shall be listed and shall
not be less than 1/2 in. (12.7 mm) in diameter.

(3) The electrode shall be installed such that at least 8 ft (2.44 m) of length is in contact with the soil. It shall be driven to a depth of not less than 8 ft (2.44 m) except that, where rock bottom is encountered, the electrode shall be driven at an oblique angle not to exceed 45 degrees from the vertical or shall be buried in a trench that is at least 2 1/2 ft (762 mm) deep. The upper end of the electrode shall be flush with or below ground level unless the aboveground end and the grounding electrode conductor attachment are protected against physical damage as specified in Section 250-117.

(d) Plate Electrodes. Each plate electrode shall expose not less than 2 sq ft (0.186 sq m) of surface to exterior soil. Electrodes of iron or steel plates shall be at least 1/4 in.(6.35 mm) in thickness. Electrodes of nonferrous metal shall be at least 0.06 in. (1.52 mm) in thickness.

(e) Aluminum Electrodes. Aluminum electrodes shall not be permitted.

Hello,

I am Currently Using Freetracker,Scancat-Gold,Radio manager, And Pc 895.

Freetracker is Nice and the Programmer Has Really Done a Nice Job
This is a good Basic and Free Program Rating A- The New Update really
Fixed the Bugs and the Program works Wonderfully.

Download at http://autowinnet.com/freetrack.html/

Scancat-Gold is OK But Does not Support all of the Possible commands - Cost
$ Around 100.00 Rating ****B+ Could be Better
But scancats History of Wonderful Tech Support suggests that there will be
upcoming Improvements

More Info and Demos at http://www.scancat.com/

Radio manager is not a bad program and Has alot of Features
Cost $40.00 Rating ***** A-

More Info and a demo at http://www.interplaza.com/bensware/

PC895 Isnt a Bad Program Either and Has in my Opinion the Best Look to It
(Not Cluttered and Looks Just Like the BC895) Phil the Author is working on
the Bugs and offering it for Free so this should become a very Good Program
B+

No website as of yet but you can look for the Demo at

http://www.filez.com/ and do a search for PC895

Trunk Commander is From the Guys at Scan Star - I have Tried the Demo and
have to Say i was not Impressed - I really like the Look of the Interface
but this Program is the Only one that writes a command to your Autoexec.bat
and consistently Crashed My system
My Opinion is it is buggy and over priced

Screen shots at http://www.scannermaster.com

Remember The Views and Opinions above are that of Jason Webb

Jason Webb EMT/EMD
The Orlando TrunkTracking Page
http://www.swl.net/orlandotrunking/

Confidence is high Repeat Confidence is high
Commander Insert your key

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 firm for this beauty. It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

>Thank you for pointing out what an idiot I am. I called my local Radio Shack
>and explained the problem to them and the reply was

Hey, it's the SIMPLE stuff that will kill you!

BTW, your priority channel is probably selectable, meaning you can have ANY channel be priority. Old scanners used to have channel 1 as the priority. I can't say for certain, but try pressing PROGRAM, the channel number, and PRI to set the channel you want to be priority. A lot of people set the local weather frequency there, then lock it out. When narsty weather comes creeping, creeping, pressing PRI will activate the channel.

Okay, so it's not JUST the simple stuff. I saw some video footage three or four years ago of some skydivers. The camera guy jumped out of the plane, taped the other divers, then started to pull his ripcord. Whoops! No chute! The impact destroyed the footage from that point on. I think.

2940. Ringo Ranger Specs Needed

John "I'm such a miserable excuse for a neanderthal" Mackey-KA0SSF
lied and whimpered:

> The members of this NG did NOT ask Cheek to provide YOU this data,
> they asked him to provide it to the members of this NG as a WHOLE!

I asked Cheek privately, and he replied. I speak and act for myself and
no one else. If others want to ask Cheek questions, they're free to act
on their own.

> HE has REPEATEDLY fialed to do so, yet you hide & protect him
^^^^^^ ----- friggin' loon, learn to spell
> like his mother (or boyfriend)!

Considering you are such a douche bag and moron, it's no wonder you
can't get an answer from Cheek. From what I've seen of Cheek, he
doesn't need me to protect him. He seems quite capable of defending
himself. After all, he's kicked your butt so often for years now, it's
a wonder you don't have a colostomy bag.

> > I didn't ask Cheek for proof of *your* degree because *he* didn't
> > claim *you* had a degree.
>
> It's pretty sad when your only defense is to play silly word games like
> above!

You stated you had a degree so you are the source of the proof, if it
exists. I wanted proof of Cheek's degree, so I asked HIM. I want proof
of your degree, so I'm asking YOU moron. If you think my original
question is a word game, it's because you can't provide proof of your
degree and you need to deflect attention from you to someone else.

> > If you want to shut me up, prove your
> > degree. If you don't prove your degree, you will continue to be
> > branded as a liar and I will constantly remind you and others of
>
> If you will enforce this CONSISTANTLY then I will support &
> comply! Will you enforce this consistantly?
^^^^^^^^^^^^ ---- what an ignorant
idiot, can't spell

I am applying it equally. YOU stated YOU had a degree, so I'm asking
you FOOL. Only your stupidity prevents you from seeing that I'm treating
you the same as Cheek.

> > You're unwillingness to prove your degee is concrete proof you
> > are a liar, a fraud, and lack any credibility or integrity what

> > so ever.
>
> Then you would have to say this for Cheek!

Not really, since he has proven to me he has the degrees. You haven't.

I accuse you of lying about having a Masters degree. UNTIL you prove otherwise, you are a liar and a fraud.

That's what I call using your "grape". Pretty damn resourceful. Thanks to you and Mr. D. P. Roberts, I think I've got the answers I need. Thanks for the tips.

2952. "Free" Bearcat Scanners from Holiday Inn

Newsgroup: rec.radio.scanner
Date: 1998-06-22 00:00:00 UTC
From: Millimeter Wave Report <mmwr@email.msn.com>
Message-ID: <uScgoqkn9GA.159@upnetnews05>
Source record: 155846

Greetings fellow scanner enthusiasts--

Those of you who travel frequently may want to consider staying at Holiday Inn. Their "Priority Club" program allows you to accumulate points towards generally uninteresting merchandise in the Priority Club catalog. However, a small footnote says that you can cash in your points towards any merchandise sold by the manufacturers represented in the catalog. Well, Uniden was represented (offering cordless phones), so I called the Priority Club people and, after three days, found out that, yes, I could cash in my points towards Uniden Bearcat scanners. Woo-hoo! So, now I am awaiting the arrival of my BC235XLT TrunkTracker, courtesy of Holiday Inn (actually, courtesy of the thousands of dollars my employer has paid to Holiday Inn).

For those of you who are interested, the points required for the two Bearcat scanners I obtained quotes on are:

BC235XLT Handheld TrunkTracker = 70,000 Priority Club points
BC895XLT Desktop Trunk Tracker = 75,000 Priority Club points

Note that 70,000 points is, roughly, $7,000 of hotel stays, so unless your employer is paying for your Holiday Inn rooms, this is not an economical way of obtaining a scanner. But, heck, if someone else is footing the bill, it means a free scanner for you!

If you want the name and phone number of the "personal shopper" at Holiday Inn who I worked with (probably the only one who knows anything about obtaining Bearcat scanners), please email me directly.

Happy scanning!

2955. Re: Cell Phones as scanners?

Newsgroup: rec.radio.scanner
Date: 1998-06-22 00:00:00 UTC
From: TIgEas LAiR <kaliber@pacbell.net>
Message-ID: <358F0F94.71FCC289@pacbell.net>
Source record: 155849

HI Mike,

Most (probably "all") cellfones can be put into test mode
and manually set to any channel the fone is capable of receiving.
The actual act of using a cellfone for a scanner is a "much"
different kind of animal, and far more difficult to achieve.
The only cases that I have known, involved "reprograming" the
instruction eprom in the fone or connecting the fone to a computer
for instructions or a combination of both. Some more modern
phones are looking toward an infrared port between the fone and
modern computers with infrared ports. Check out the alt.cellular.
nokia news group for an example of this kind of exploration.
Instructions for setting a phone to test mode and listening to
channels are found in many places on the web. There is "NO"
instance that I have heard of that a phone can do this outright,
excepting of course, the motorola phones that use the #3X scan
command successfully, and the moded OKIs. As I mentioned in
an attached previous post, vast archives of information are
available on this topic. I have a large collection of this info myself,
if there is some (limited) topic that you would want.

2958. Houston PD Encryption?

Newsgroup: rec.radio.scanner
Date: 1998-06-22 00:00:00 UTC
From: John Habbinga <habbinga@wt.net>
Message-ID: <6mn4s6$n8m$1@news4.wt.net>
Source record: 155852
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Houston PD uses several frequencies in the 460 MHz band for voice communications as well as MDTs that operate in the 800 MHz band. Lately I have heard a lot interference that I believe to be "Digital Encryption." It sounds like the same kind of encryption that many federal agencies use. It is used on the same frequencies as voice communications that are in the clear. At first I thought this was just some sort of interference (stuck mic, or other radio problem), but there is a pattern to the sound that leads me to believe that there is conversation going on. Now this may be an image of another frequency because it appears that the regular users of the channels do not hear it as they will often interupt with their own communications. I have several radio and all of them receive this "encryption interference."
Can someone help me identify this? Thanks.

Dan...I was trying to help clarify why our shipping price is higher in response to your comment, "that is a very good price, but it is a shame that particular vendor has to "mask" their profit in ridiculously inflated shipping and handling costs." My apologies for not understanding what you were trying to say.

> >Let me assure you that we do not want to mislead any of our customers. That's not

> What added services and benefits to ME?

I do not know your individual situation, therefore it is difficult to answer your questionon how our added services and
benefits would help you. For our government or
industrial customers who depend on CEI to respond to their major disaster such as flood, hurricane or
earthquake, it makes a difference. Government customers who needs to order 500 radio transceivers
with charged batteries at 3:00 AM in the morning for same day delivery along with video and computer
equipment list us in their resource manual as an equipment source. Most of our dealers reselling our
products do not offer 24 hour emergency service nor do they maintain sufficient on-hand inventory
or have the logistic resources to move tons of freight on a moments notice anywhere in the world.

> What? Emergency Operations Center? This makes NO sense. Are you not
> a Uniden dealer?

The Communications Electronics Emergency Operations Center was designed to serve as ahub of operations when disasters or
emergencies damage or destroy the infrastructure of
federal, state, local government agencies or business. Like a hospital emergency room, our staff is responsible to ensure that needed resources are on hand and immediately available for dispatch worldwide. We are located in a secure facility in Ann Arbor, Michigan. Our facility is available 24-hours a day, seven days a week to respond to calls for assistance from government agencies.

We are also a Uniden Master Distributor. We are not a Uniden Dealer. As a Uniden Master Distributor, we are under contract with Uniden (and other manufacturers) to
distribute the products they make to other Uniden Distributors. Our dealers are not under contract with Uniden. As a Master Distributor, we are responsible for purchasing inventory typically in semi-truck loads. Many orders are over 1,000 radios per purchase. We then sell to other distributors who in turn sell to Uniden Dealers who usually resell to end-users.
It can sometimes take up to two months for a product to reach the end-user after we resell it to the
distributor who sells it to the dealer and finally to you. We call this procedure "filling the distributor pipeline." Many end-users get frustrated waiting to purchase product from their dealer because of the initial waiting time to fill the pipeline. As an accommodation to end-users, who can not find the item from their local dealers or are frustrated waiting for a new item as the distributor pipeline is filling, we welcome end users to purchase products directly from CEI by visiting our web site at http://www.usascan.com and sending us E-mail or calling 1-800-USA-SCAN to order.

As you may know Dan, a CEI customer benefit is our 61 day satisfaction guarantee return policy. When an item is returned to us, we return it to Uniden as part of our quality assurance
program. After a quality control inspection, Uniden then offers our returned merchandise directly to the end user. Please visit the Uniden web site at http://www.uniden.com to get some great values on our returned inventory.

> Then why do you advertise in most radio mags for consumer business?

To reach our government clients, we advertise in many different magazines. For example: Firehouse Magazine is edited for the fire service industry. The primary audience is America's 1,500,000 paid and volunteer firefighters (call 1-800-825-8577 for a subscription).

The Journal of Counterterrorism & Security International readership is made up of top administrators in the law enforcement, military, government agency and corporate security field. Subscribers are primarily police chiefs, state police, sheriff departments, weapons training facilities, federal law enforcement agencies, marshals service, CIA, FBI, ATF, DOD, military bases, airports and embassies. To subscribe call 703-243-0993 or visit their web site at http://www.securitynet.net.

Monitoring Times is edited for the recreational radio hobbyist and also for communications professionals; consultants, technicians and administrators of commercial, government and military operations. To subscribe call 828-837-9200 or visit their web site at http://www.grove.net.

Law Enforcement Technology is edited for police chiefs, sheriffs, commissioners, directors and other commanding officers. It offers police professionals the latest in products,
technology and management innovations. It closely aligns itself with the needs of the more than 500,000 US municipal, county, state and federal law enforcement personnel. From monthly
columns on training, computers, weapons and clothing to full scale features on hi-tech communications, elite tactical forces, Law Enforcement Technology offers a blend of news and information for the "cop of the future". To subscribe call 920-563-1726.

We do a great deal of advertising as one division of Communications Electronics is an ad agency. We also do direct mail, radio and television ads appearing in various markets.
In addition, we sponsor cooperative advertising programs with our dealers to support their marketing efforts in distributing our products. Some products may only be offered to our government customers through controlled distribution advertising.

I can understand why you don't believe we are registered as an Emergency OperationsCenter. There are very few privatized
organizations like us with an emergency management
facility and a warehouse of products. For verification, you might want to check out our

registration with the U.S. Department of Defense, Central Contractor Registration at http://ccr.edi.disa.mil/ccr/cgi-bin/query.pl. Enter our D-U-N-S number 020893541. Or if you prefer, call Dun & Bradstreet and order a business information report.

As stated before, operating an Emergency Operations Center is significantly different than your local radio dealer. Our handling costs are higher and this is passed back to our customers in our shipping/handling costs. Most of our dealers stock two maybe three radio scanners such as the Bearcat 895XLt or BC235XLT. As a master distributor, at any time, we could have thousands of radios in stock. Inventory carrying costs to support our mission to our primary customers is expensive.

> FEMA inspects you to make sure you have enough SCANNERS in stock?

As our Emergency Operations Center provides mission critical supplies to Urban Search and Rescue Teams who respond to major disasters, it is essential to have our equipment ready to respond at any time. An evaluation team from FEMA came to our facility specifically to inspect our equipment such as scanners, two-way transceivers, batteries and other equipment. FEMA requires Urban Search and Rescue Teams to have a comprehensive equipment cache and have total self-sufficiency for immediate mission response. FEMA checks to make sure a Search and Rescue Team has rations for 72 hours of operations, housing and feeding facilities, acoustic, fiber optic and video search equipment, satellite, digital phone and radio equipment capable of providing local, regional and global communications of voice, data and fax transmissions. Our Emergency Operations Center is routinely audited for mission readiness by different clients.

Most people would agree with you. Dealers find it difficult to please their customers who do not support them with sufficient profitable purchases to keep them in business.

> >Please remember, we are not a conventional dealer. We are a master distributor and an

> Again...DO YOU , or DO YOU NOT want the business of individual radio
> consumers?

For almost 30 years, we welcome business from everyone worldwide.
It does not matter to us if you purchase our Uniden product from us or your local Uniden dealer. To make it convenient for you, we try to have Uniden and other products widely distributed across the US, and US territories as well as military bases but we go the extra mile every day to try to get you the Uniden product you want when our independent dealers do not have product in stock. Please remember, our primary client is government and rescue agencies. As a government supplier, we are required by law, to give priority to certain government orders.

> >I'm told, next weekend, we should have a crowd of amateur radio operators operating radios

Actually Ann Arbor is hot and sweaty today. You can call our 24 hour Weather lineat 734-994-9000 (another CEI division) for
our automatic surface observing system.
Thousands of people call our weather systems worldwide for up to the second time and weather information daily.

Hi dave,

They operate in about 4 or 5 standard bands (for the most part)
from around 309 mhz to 390 mhz.... there are a few at about 402
mhz......there are a number of universal openers advertised these
days that will transmit on all of the most popular bands. These
remotes and the "Ramsey" sig amp kit and and the pushbutton to
computer
"interface" featured in a Nuts and Volts from last fall or winter....
are the basis for the universial garage door "lock picks"...these
also work nicely on car alarms and car door remotes, too. There
is a nifty $99.00 pulse grabbing rf sampling module with
software that is used to "GRAB" remote codes from the air.
I can hear my remote about 1/2 block down the street with
one. There are also a few "dedicated" remote garage opener
controller circuits that eliminate the need for the computer
control, listed on the web. There used to be a "novel" application
of the "signal grabber" and a tape recorder that sampled and
recorded a remote opener signal....then the signal was pulse
shaped (schmidt trig) from the tape speaker output back
into the multi remote opener modulator (the ic that controls the
mod transistor) thru the "ramsey" signal amp kit.... to reproduce
the captured signal for use later or ????..... This is an
interesting
topic and if the average "citizen" knew about the ease of signal
hacking these days, they would stick to the "GOOD OLE KEY"
as I do.....eh eh eh .... If you want a little more specific info or an

old schematic or two "from web publishings" I might be able to
dig one outa my "VAST" collection of fun info and tech data....

c-ya
a_alpha1 - TIgEas LAiR

P.S. - Needless to say that there are numerous "potentially
abusive" (illegal) apps for this info and please don't break the law
or take advantage of others with technical trickery....

I have a brand new BC855 xlt stock scanner which is cell modifiable for
sale!!
It receives 800 megahertz and air bands and is a portable lightweight
base unit!!
It comes with antenna,AC adaptor,instuction manual and warranty!!!
I am asking $100.00 firm incl.2 day priority shipping!!If intrested E
mai me at vegas69@webtv.net !! Thanks Barry

2970. Re: Cell Phones as scanners?

Newsgroup: rec.radio.scanner
Date: 1998-06-22 00:00:00 UTC
From: TIgEas LAiR <kaliber@pacbell.net>
Message-ID: <358E12F2.35E86CDA@pacbell.net>
Source record: 155915

Hi John,
Some models of analog cellfones have "indeed" distinguished
thenselves as "good" cellular scanners.... the oki-900 possibly
being the most famous. This is usually done by attaching a
serial (sort of) cable to the fone (c-tek cable for the oki) and to
a portable computers' serial port. (or home unit) Then the
"special" software programs are run to allow the "scanner" type
oiperation.
. They have squelch operation , software based, using the "RSSI"
signal level from the fones.... This practice is, of course, ILLEGAL
in the U.S.A. now, ...and the use of the "special" software is really
"grey area" as it will usually allow "complete cellular operation
from the computer keyboard, including changing the esn/min
numbers for cellular fraud operation. (making free calls)
An interesting "educational" radio topic none-the-less and
there are "massive" volumes of "special" software/info/rom
pgms available on the subject. Besides the "LEGAL" ramifications
of this subject, the practical aspect is that the cellular equipment
and cables. et al are "very expensive" relativly speaking, and
the "useful" models are highly sought after, these days. It is
"MUCH" less expensive to just get a regular radioshack scanner
to do the job. If you want more info on this topic, try the attached
url and look at the "Black Philes" cd rom software collection.

From: Richard.Whitcombe@BTInternet.com
Message-ID: <358e3945.13085345@news.btinternet.com>
Source record: 155916

Hi, Can anyone help me with information on the mod. for the Lowe
HF-150 set to add an external S-meter ?
This meter comes with the SP-150 (or AP150 cant remember) audio filter
unit. I bought a DSP processor instead of this and therefore have no
S-meter. If anyone can supply me with construction details /
schematic diagram or even a web site with this info on id appreciate
it.

TIA

Yep! There are a few stand alone kits and assembled kits that do this.
There is also software out there to do the same....I never could get it
to work and wanted something that I could use portable so I got the CTP
pre-built kit....It kicks ass! Go to my site below to get a idea of what
its like.

#1 with a money order instead of a cheque. Seller contacts you by e-mail on receipt of funds, and upon shipping the item. Look the seller up on deja news, see what kind of person they seem to be by reading their previous posts. Frequent posters will value their reputation! I always check for a ham callsign; for some reason I trust hams more than average people. You know where they live, hehehe. If you are uneasy you can use COD, but it has it's drawbacks; you can easily receive a brick in the package! There are internet escrow services that seem to have reasonable charges. I've never used them, but on a high value item I think I would if I was unsure of the other party.

Remember that most people are honest, and problems in internet swap transactions are very rare, and often related to poor packaging more than any other factor. (freight damage!) I have bought and sold about 10 items on the net, always received what I paid for, but not always in the same condition as it was promised, due to poor packaging. In both cases I was able to fix the rigs myself, but if not then this could have been a major transaction problem!

Source record: 155937

I have a RS Pro60 and while scanning (or locked on a freq) it kind of skips.
you can hear the scan crystal clear except for this annoying skip every 2 secs.
the screen gives a quick flash as well. I know it isn't the batteries because
it does it when connected to the ac/dc cords. It also doesn't matter which
anntenna I'm using either. I appreciate any and all opinions.....hopefully it
isn't serious.

You have your PRI switch set. One of the channels is a priority channel and
your scanner is checking to see if there's activity on it.

Yes, I had the same problem you probably mean the gas line it will
work just don't puncture the gas line doing it. I grabbed on to one
of the brackets. I have a vertical on the roof and I can pick up
things from quite a distance. I also found that an FM trap helps out
considerably.

The GE cell phones have a service mode whereby you can press a sequence of keys and the radio goes into a manual service mode. You need to press a second key to manually step up to the next channel increment. I don't remember the exact key sequence; however, it should be known by any Authorized Ge service center.

i've sat by watching all this lunacy and said nothing. now i want to talk. the man called bill cheeks is a dick. he is an old worn out has been who tries to prey on those he can fool. he will never agree to any type of truce or plan to end the problems because he loves to cause problems and that is all he lives for.

i know bill cheeks from about 10 or 15 years ago in colorado, back when he started to modify scanners and cb radios. a two way shop in denver used to laugh at all the radios they had to fix after he had tried to work on them.

why he had to leave the colorado area is another story and why he had to live outside the Denver city limits is yet another story.

cheeks has no electronics knowledge other than what he could learn from the magazine popular electronics which he had subscribed to for many years. when I knew him in colorado he was taking a correspondence course to get his electronics degree from one of the mail order schools that advertise in popular electronics.

Then his wife left him, he had some legal problems arise in colorado, and he soon left the state.

The stories go on and on. Some one should ask cheeks about the satellite dish he blew up!

cheeks deserves everything he gets on here and more. the only ones who support him are the ones he can fool.

Yes Todd....that's who they want working for them.
I worked several years ago for RS. Thinking that because I enjoy radio monitoring
and am somewhat knowledgeable, I would do well. Not so. RS mgmt will tell you NOT to take the time with the customer who wants questions answered or a small part.
They want you selling the high end merchandise. The person who goes in thinking they can help people wind up losing commission and thus their job.
Your sales are monitored for time, if you sold a service plan, even if you sold batteries with a battery operated device. You had better.
I use Radio Shack scanners because they are easy to get. I never purchase anything without doing my homework, and I always ask for the manager when I do have a
question or need an obscure question answered. The managers don't strictly work on commission or minimum wage.
A month or so ago I went in to the local mall RS and asked the clerk where the batteries
advertised in the big sales flier were located and he said he didn't know.

Todd wrote:

Hi

Picked a Fox Pac Programmer up at a swap recently. At firs I thought it was a Fox BMP 60/10 scanner. It has a slot in the front to stick something in and a cord with a connector out of the rear. Has keyboard and frequency display and different functions on the keys labeled. I have know idea if its complete or not but If somebody has any info on this I would like to hear from them.

Thanks Ted

From: Pat Miller <pert@tas.tas-kc.com>
Message-ID: <6mme1f$t9c$1@news1-alterdial.uu.net>
Source record: 155954

I will be spending some time in Hickory County MO-- the county seat is Hermitage near pomme de terre lake. It is a small county in the Quad lakes regon just south of the halfway point to Springfield from Kansas City.

I am not sure what sort of weather coverage to expect from the area.

What ever info you have (have the time for) would be great.

another town in the area I'll be in is Wheatland -- Like I said there is not much around here and I may have to just monitor Fire/PD/Sherrif/Water Patrol/etc. NWS does have a transmitter on Channel 5 162.45 simulcasting from another area. Of course I am searching for the 2 way freq's

Here are some surrounding counties/towns/lakes:

Henry COunty & Clinton (town) to the North West
Benton County & Warsaw (town) to the north
Polk County & Bolivar (town) to the south
Cedar county & Stockton (town &lake) to the South west
Cedar county & Stockton (town &lake) to the South west
St. Clair county & Osceola & Iconium (towns) H. Roe Bartle Scout Reservation located here -- to the West
Dallas County & Buffalo (town) to the east (They have a satalite to ground repeater)
Harry S. Truman lake is to the north

and of course to the east is Camden COunty with the lake of the ozarks and Camdenton (this may be too far east for my location)

Hellooooooo Jerko. Posting from Dejanews, how quaint. Truth is no one can verify anything you wrote because we can't even verify who the hell you are. The only thing that truly identifies you is the same b.s. rhetoric we always hear from John "No fair, I'm telling my mommy!" Mackey about Bill Cheek (not Cheeks, moron.): He's known Bill for years, he can't fix radios worth a cheese doodle, and has no real certifications or degrees. People like you fail to realize some evident facts that anyone can see.

1. No one gives two turds in Thailand what the hell happened to you or Bill 15 friggin years ago. Ancient history. Take a pill, visit a shrink and move on.

2. Bill has forgotten more about scanners than most people (including myself) will ever know. That's not ass-kissing, it's just fact. Tell me

something genius, could YOU have figured out how to add 24000+ channels to a scanner? I couldn't. That alone shows he knows PLENTY about scanners and electronics, something that Mack-tard and friends have NEVER demonstrated.

3. The only people who sit here and blast away at Bill are stupid old fart hams who don't give a crap about scanning and just wanna come in here and start shit. Everyone who flames Bill comes here with that sole intention in mind and almost never posts anything relevant to the subject, AND these same morons pitch a bitch and drop me in their kill filters when I have the "nerve" to do the same to them. Friggin' hypocrites!

All I can say to you is if you aren't interested in scanning than take it elsewhere. Don't just come in here and bitch when you don't even belong here in the first place. What a goddamn surprise, you have been lurking for all this time and the only contribution you make is yet another assinine flame about Bill Cheek. Typical John Mackey fanaticism.

You friggin' loon!
-Phil

3012. Arizona frequencies ?

Message-ID: <358ECC95.99947A58@mich.com>
Source record: 155961

I was a rescue diver for them last year, and being the true scanner geek that I am, I used my PRO-43 while sitting on one of the rescue boats ("TANGO #" boats) in full SCUBA gear...

Bud was in the 464 or 469MHz range. It was fascinating to monitor. I learned that for the most part, all the driver does is try to keep his hydroplane under control -- team spotters with radios & binoculars tell him whether to speed up/slow down, prepare for a turn, start to turn, how much time is left, whether someone is gaining on him, etc.

Some of the exact freqs are listed in the back of _Police Call_, which does have a hydroplane race freq section.

Even just being less than 70' away from the hydroplanes (as they zoom by at 170MPH!), they can be hard to monitor. They use low power, obviously low antennas, and the occupant is being bounced to hell. They don't talk much, except for profanity if they get cut off or their boat breaks.

ABPA officials have their own freqs, and there will be a handful of VHF marine freqs in use for race operations, rescue, course 'track' security (USCG), etc.

This was one of the ORIGINAL messages where BILL CHEEK started all
the flaming a few weeks ago. This message, in itself, is not all that
bad, but he caused it to snowball much worse from this point.

See for yourself, go to Dejanews & check it out!

During the last so called truce by God himself, it all started again.Bill Cheek
started stiring the shit over his flames that have now engulfed the NG.Each time
he just pisses farther and farther.

This message was forwarded to you from Deja News by rcl1@aol.com.

Subject: Re: WiNRADiO Review
From: bcheek@san.rr.com
Date: 1998/05/14
Newsgroups: rec.radio.scanner,alt.radio.scanner,triangle.radio

Rich Wells <wellsr@ibm.net> wrote:

> Greetings Fellow Hobbyists,
> I've just finished my review of the Rosetta Labs
> WiNRADiO WR-1000i receiver PC card.

....in which you said:

>" I have heard from some users who own mini tower
> PCs that this card is too long to fit inside! So
> keep that in mind, for sure.

Hearsay? Why are you reporting hearsay without
expressly calling attention to that fact? Why
should people "keep in mind" that sort of thing
when sheer objectivity can determine the TRUTH?

I have a dozen computers in my lab, all of which
can hold the 3/4-form factor AT WiNRADiO card.
Not a problem in desktops, mini/mid/full tower cases.
In fact, I have Intercept Technology's VADER card
that fits in all my computers too, and it is a FULL

AT form-factor card.

Hopefully, you won't continue to exhibit bias based
on hearsay. Go by the facts, and the fact is that
WiNRADiO comes on a 3/4 form-factor AT card. Which
just happens to fit the 16-bit ISA slots of all 286
and up PC's with exception of certain slots that
are in line with the CPU. But there is always one
or more slots capable of handling a full form factor
AT card. And WiNRADiO is only 3/4, sooooo ?????

Elsewhere, you ruminated:

> "Many will find the Spectrum Scope a great aid.
> But few people will buy this radio simply for these aspects.

How do you KNOW what people will buy and why or why not?
Are you trying to steer people in one direction or
another? Why? Do you think the radio hobby will
benefit by WiNRADiO going out of business?

Yeah, right. How's about mentioning the STARTING
price of the Icom PCR-1000 at over $600. If it
weren't for WiNRADiO, it would STILL be over $600.
At the very least, WiNRADiO drove down the price
of the Icom....and it's own, as well. So what
benefit is there to you or to the hobby by running
WiNRADiO out of business as you appear to be inclined?

I won't bother to comment on the rest of your verbose
review....after all, you are entitled to your opinions.
And you sure rendered plenty.......carefully couched
in the trappings of objectivity.

The record clearly shows you are an "Icom man",
so it is understandable how you would construe
the conclusion of your "objective" review.

You really should try to think BIG, though. WHICH
radio is the better for any given person is NOT
yours to decide. Yours is solely to report the
FACTS in an objective manner, and let the market
decide for itself which is the winner.

Even if you wear Icom baseball caps and tee shirts,
and chew Icom tobacco and Icom bubble gum, you
ought not to let that color your reviews. Unless,
of course, you're an Icom shill on their payroll
or something........ which you're not, right?

3023. Icom R-100 Woes... any other owners here?

Newsgroup: rec.radio.scanner
Date: 1998-06-22 00:00:00 UTC
From: drgrant@ziplink.net
Message-ID: <3595adcb.9628444@news.newsguy.com>
Source record: 155968

Hello fellow scannists-

I own an Icom R-100... It appears to be suffering from
severe intermod on the VHF band... I was wondering if anyone else
had this same problem. It doesn't matter where I am on the band, if
im on 2 meters, the thing will get whacked by some far off pager...

Also was wondering if anyone knew how to make this thing jump past a
"hit" when in search mode, lets say, if the thing locks up on a birdie
or whatever.

Any suggestions or comments, please send mail to: drgrant@ziplink.net
and/or post to the group. What I'm really getting down to here is im
wondering if sending it in for service will actually do anything... or
if its a waste of my time and money.

-Mike

>and everyting else and all this fucker gets is garbage. If anyone knows
>why this thing is doing this let me know if not this fucker is gone.
>Scott..

I'm surprised your 200xlt actually works that good. I had one for a
total of 48 hours then sold it off for something else, the guy who
wanted it was like bouncing off the wall over it... I didn't see what
the big deal was... my big gripe with the 200xlt is that theres that
hissing noise in like every recieved transmission..... the thing is
also deaf on VHF low with the stock antenna. (I'll give it some leeway
here cause the antenna would be way too short....)
Then theres the wonderful nicad battery pack.... not a fat chance
in hell of using alkalines on this thing. (unless they made some type
of AA pack I was unaware of)

But compared to that thing, the ratshack pro 39 or pro 43 would kick
the ever loving crap out of it! Much crisper, clearer sound from the

ratshacks.

Just my .02...

OK fine....cover your costs in an increased product price, and charge
the NORMAL shipping costs.

FEMA inspects you to make sure you have enough SCANNERS in stock?

This is very true. No argument with that.

Ken...

Thank you for the concise, albeit lengthy explanation of your
business, I am sure we are all more enlightened now. The above is
very hard to swallow in one gulp, and I may have to go back and read
it over to fully digest it all.

Your current price on an 895 XLT, even with the high shipping and
handling charge is lower then most, if not ALL other vendors. Despite
all of the above, no one can argue with a good deal.

Again, if you review my initial response below, apparently prompting
the above , you will see that I agree there openly that your pricing
is low. I may even make a purchase from you in the near future. I
simply questioned why the shipping and handling was so high.

Now that I know the funds are used for an "Emergency Operations
Center" in Ann Arbor, Michigan, I wouldn't feel as bad paying it....

Cris Hanna, BS, MCP <crishanna@aol.com> wrote:

>Have a real problem with intermod in the VHF-Hi
>band....any one know of any good add-on filters.

If you know what's causing the intermod, you can
use a PAR notch filter (about $60). PAR Electronics,
6869 Bayshore Dr., Lantana, FL 33462, telephone (407)586-8278,
manufactures a new series of intermod filters designed
for scanner enthusiasts. Despite my last name,
I am not related to PAR Electronics. :-)

PAR can furnish intermod notch filters custom tuned to your frequency.
Grove Enterprises sells them, too.

I ordered two filters for testing: 158 and 454 MHz filters,
models VHFDN158HT and UHFDN454HT. The test results
are pretty good and will appear in July 1998 Monitoring Times
magazine.

PAR claims the VHF model attenuates 157.5 - 158.5 MHz
signals by 35 dB and the UHF model attenuates 454 - 455 MHz
signals by 25 dB.

OK, I found out that the Pro-508 was a 10-channel table model, cat. no. 20-408. According to the computer at my local RS store the current selling price is $12.97, which of course is still pretty good.

>cell phones. Can anyone shed some light on this for me? Thank you in
>advance.

That is the rumour. It sounds logical, because the phone would HAVE to be
able to scan the frequencies to find the cell and/or a clear channel. I've
also heard that some of them can be used as two-way units at close range, but
haven't been able to find out anything more about it. That one sounds a
little more far-fetched.

a victim. It is a matter of CHOICE, not
circumstances.

3049. Buying from this newsgroup's ads -what's the best procedure

Newsgroup: rec.radio.scanner
Date: 1998-06-22 00:00:00 UTC
From: dweber@springfield.com
Message-ID: <358dd3cb.7035025@news.wwa.com>
Source record: 155994

I've seen some equipment ads on this newsgroup that seem very
interesting. If I decide to buy the equipment from an e-mail message,
whats the usual procedure to provide some safety to both sides ? I
assume I can't go see the seller or the equipment., but that seller
ans me agree to a price and who pays shipping.

1. I get mailing address (no P.O. boxes), phone number and I mail
personal check to seller. Seller sends me equipment after the check
clears. (This seems to add some safety since I know the seller's
name, phone, address, and e-mail address)

2. Seller sends me equipment, I send cash or check after it arrives
and fits seller's description (I would like this, seller may not)

3. Some other method

Any thoughts would be appreciated

>trench about foot deep and lay this rod down horizontally?

Yes, you can lay it horizontally. I had almost forgotten about that trick! Broadcast stations lay out their radials horizontally. Just dig a ditch as deep as you can get it and bury the rod. Moist ground, good wire connection, and it should be as good as the vertical. The more rods, the better, as with vertical.

As always, "Call before you dig -- 1-800-ELECTRO-CUTE" so that you know it's safe to dig where you're gonna dig. The power danger is not always over your head. Sometimes it's below your feet!

This is to anyone and no one. Who cares.
It's just a public announcement about my
last frappe across Mackey's jowls for a while.

<Bop, boppity, boppity, boppity, bop>

Effective sometime tonight, our dearly
beloved hermaphroditic nincompoop Mackey
is going back into my Twit List. For
those not in the know, a Twit List is
the same thing as a Kill File, a Shit List,
and/or a filter.

That means I won't see posts from HIM;
and if things are working right, I won't
even see posts that mention HIM. Poof,
the idiot will be sent sailing though the
air with the greatest of ease, just like
the man on the flying trapeze.......with
my 13EE boot print emblazoned across the
seat of his britches.

I've offered the imbecile an iron-clad
deal for several weeks now....the gist
of which is as follows:

1. He doesn't talk to me. I don't talk to him.
2. He doesn't talk about me. I don't talk about him.
3. He doesn't make references or insinuations about me.
I don't make references or insinuations about him.
4. He doesn't even THINK about me.
I don't even THINK about him.

Well, the yellow little lizard just couldn't
accept it.... no biggie, I had him on my Twit
List last week, but opted to relax it so I could
give him one last good hosing this weekend.
(Hey, I deserve it!) But after about midnight
tonight, I'll be done with the nitwit and will get
on with my business and ratkilling for a few weeks.

Not only that, but I'm going to be fine-tuning
and tweaking my filters so that all off-topic stuff

gets culled out as much as possible.

No heroics here. No "doing anyone any favors". No sainthood, no nothing other than I've taken a leak and a dump on Smacksie, and instead of being reviled by it, he actually LIKES it, fer Pete's Sake! Geezus H. Kriste, the wretch is a dang masochist all the way. I used to make jokes about it....but that cat is fer real, a downright scurvy, low-life masochist!

Years ago, we used to have a joke, "You know what a sadist does to a masochist?"

ANS: Nothing. <chuckling>

I learned the valid side of that last week when I put Mackey on my Twit List and then saw the hullabaloo that ensued afterwards as people replied to his increased tempo of posts. That REALLY hurt the poor sap! So now I can twit him again, this time to such a depth that he will vanish. And then laugh my butt off as he foams, froths, and erupts in agony.

Because.....as I twit him out, he'll have no reason for living anymore. It will kill his soul, if he has one.

So that's the deal....my 4-step outline as shown above becomes the rule....and it matters not a whit to me if he abides it or not....because I won't know. And after I stop laughing my ass off in a few days, I really won't think about the poor sap.

I gave him his chance for an honorable exit. He refused. So now he has no choice. He's done been tarred and feathered. Mackey is gone. Bye bye, Smacksie.....

Not to say that I won't come back at him if he stays here and keeps it up. I expect that he will. I've twitted and ignored him before....and that just increases the fervor and tempo of his attacks. That's what the jerk will do this time, too.

The difference this time, is that I am calling it in advance for those who'd like to prove me wrong. Here's your chance. Watch Mackey and see if he puts a sock in it or not.

If he won't after a few days, you'll know.

And if he does stuff a sock in it, then we'll
see just how long it will last. Bets are,
it won't last long..... Smacksie's obsession
with me is just too strong....but we'll see.

So with that....it's bye bye Smacksie.
See ya, numbnuts, wouldn't wanna be ya.

There is one thing I have to say about this ...

It takes a better man to walk away when being called names .... THINK ABOUT IT !
If there is no response to the name calling ... it will soon stop.

On behalf of REAL scanner fans on this group.

WHY DON'T YOU TWO JUST SHUTUP FOR ONCE ... YOU TWO ARE LIKE PATHETIC CHILDREN.

I think it is in the best interest of everyone for this crap to stop.
Personally I am getting really sick of all of it.

But if you two really want to continue ... please email each other because we don't want to hear it any more. Maybe this group can get back to being about SCANNERS !!!

I know about pipe grounds and they should not be allowed in the electrical code.
There have been many ground circuits disconnected when the pipes have been repaired due to leaks or freezing , people tend to use plastic pipes to splice in repairs.

I know in my area the main feed has to be copper all the way from the street into the house and if you have an electric water heater the supply pipe to and from the heater have to be copper

Sure you can lay the rod horizontally, a friend of mine had the same problem as most of the soil around here has alot of clay also, he took a 1/2 inch 10 foot section of rigid copper pipe and used that as his grounding rod,he cut one end on angle so as to have a point , wet the ground where he was going to place the tubing, connected his garden hose to the other end of the pipe, stood on a step ladder, inserted the pointed end into the ground, had someone turn the water on and used the hydraulic pressure of the water to drill the pipe in .
when he got the top of the pipe within 5 to 6 inches from the ground he stopped.
It takes two people one to hold the pipe and one to control the water unless you have a valve that is close to where you have the hose attached to the pipe.
Make sure you have the hose attached securely to the pipe or the pressure will pop the hose off.

Let me know how you decide to do it, my friend has never had any trouble with using cooper pipe as a grounding rod and has several installed.

Bull crap John , those are not minor conditions, since you want to place conditions , how about the following conditions , if Bill accepts your two conditions then you have to accept these conditions, You will unsubscribe from the alt.radio.scanner and rec.radio.radio scanner newsgroups, you can never post to or read any post on these two newsgroup ever again.
In effect you are banned from these groups forever and a day!

You never send any email to Bill or make any statements about him on any of the other newsgroups.

If for some reason Bill has crossposted a reply to someone on any other newsgroup that you may be subscribed to, you will not make any comments whether good or bad about Bill or what he has posted , directly or indirectly.

Bet you won't agree to these conditions John.

Actually, depending on exactly what you are grounding, they can be one
of th BEST grounds! (assuming it is a coppper pipe)

> There have been many ground circuits disconnected when the pipes have
> been repaired due to leaks or freezing , people tend to use plastic
> pipes to splice in repairs.

According to code, if it is replaced with something other than copper
and is carrying a ground, another ground wire of proper capacity must
be run to essentially jumper around the splice to the same
ground rod.

> I know in my area the main feed has to be copper all the way from the
> street into the house and if you have an electric water heater the
> supply pipe to and from the heater have to be copper

Yea, different areas do different things for their local code.
In Oregon & Washington the main feed has to be copper for the
first 10 feet (it might be 12 feet?) coming out of the ground,
then may be pvc or what ever after that point. Further,
that first 10 feet (12?) MUST be tied into the ground for
the house.

NOTE - I could look in the NEC book for the exact length of
10 or 12 feet, but I think the EXACT length is not really
important.

You can thank the old fart Billy Cheek for that.
I guess the Viagra pills don't work for him anymore.
Got to get his kicks by picking fights with everyone.

I hear he's in poor health and may not be with us for much longer. Seems after his 10-4 Good buddy book can't sell anymore he no longer can afford the cost of expensive medication.
Just treat him like any other sick person. Pity him, feel sorry for him, give him the attention he so desperately seeks. He's not a normal person. Billy has been taking in too much aluminum and he forgets things once in a while, like his meds for that twitch in his left cheek. Poor old boy. :-(

Try the Austin Spectrum. For approx. $75 it is supposed to be the best mobile scanner antenna for all bands. It uses an NMO mount.

Try RadioWare - dealer:

The 3000 battery pack is glued together,there are no screws.If i remember correctly the 3000
only charges the battery when the radio is off.
If you have it plugged in and turned on ,it's not charging it's just suppling the radio power

WHO appointed YOU to speak for the NG? You OBVIOUSLY
are NOT aware of history since Cheek has been asked SEVERAL times
to cease his posts of commercial nature.

> Bill offered you a fair proposal,

An I offered two very fair ammendments. I if you & Cheek truly
desire to lower the noise level in the newsgroup, (Which you
have repeatedly shown that you do not wish such) then take
me up on his FAIR OFFER TO YOU!

Yeah, I try to keep things on a PG-13 level, since Moron Mack-tard never graduated from the 6th grade. That way he understands it better, and the mental institution he lives at doesn't censor the message.

I can't believe the guy is an actual ham - has anyone ever verified that? With all the lies he spews I wouldn't be surprised in the least if he was no ham at all.

Hello,
I want to buy a BC235XLT scanner. These dealers were found to have the best prices on the internet.
Does anyone have anything good (or bad) to say about them. By the way, access the respective BBB's (Better Business Bureau) and was unable to find these dealers names in their listings, hence my resorting to asking those that monitor these NG's.

National Electronics
PO Box 15417
Shawnee Mission, KS 66285

Hobby Radio Stop
P.O. Box 291849
Kettering, Oh 45429

Communications Electronics Inc.
PO Box 1045
Ann Arbor, Michigan 48106-1045 USA

Or, does anyone know of a dealer on the west coast, I'm in Washington State, that can match their prices?

Thank you,

ICOM R7000 receiver with TV-R7000 video adapter
AM/FM/FMw/SSB 25MHz-1000MHz (no block)
AM/FM/FMw/SSB 1025MHz-1300MHz

$850 for both
$750 for the R7000, $150 for the TV-R7000

This receiver is in near mint condition and includes the 12V DC option as well as the TV-R7000 video adapter. All original boxes and manuals are included. I've also just installed a fresh internal lithium memory backup battery.

Radio Shack modulator (base band video and audio in, channel 3 or 4 out) included with TV-R7000.

Prices include shipping by UPS ground within the continental US.

Bob

No dice Bug Boy.

I don't see the need for a moderator nowadays. I get a wide range of posts in this NG and it seems to be healthy and kicking. Besides, the filtering technology is so much better now. (Although I've never bothered to learn any filtering; I simply don't click on what I don't want to read. Always seemed like a "no brainer" to me.)

But I spent many a night on several moderated FIDONET conferences on the bbs circuit. They had this "quality over quantity" thing going on over there. In fact, I didn't move to the USENET until that sad day when a post came down the pike announcing the end of the FIDONET party.

In all those years, I've only seen a few moderators step in and squash a bug or two. Sometimes; a few us that had been sitting around poking the bug with a stick would raise a collective "aawwwwwwww, did'ja really have to go and do that?"

But the vast majority of the conference would be doing the "happy dance" as the moderator lifted his hoof off the bug goo. No big deal. Another bug would always find its way in (Ooo! There's another one! Get a stick!).

I never saw *anyone* that got squashed that wasn't a total and deserving asshole.

Ring a bell?

You friggin' loon.

Cross-posted to:
alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Has extended recieve (137-174mhz), and can do mars/cap
after holding the F and DTMF keys while turning on the radio.
Holds 33 freqs (30 standard memories, 1 call channel, and two
VFO freqs). Has two power settings, 45 watts and 10 watts.
This is an automotive mount unit, but can be used in the
home with a 12v 10amp adaptor.
It comes with the hand mic and has full dtmf keys and
some keys for controls on it. Display is backlit with green LEDs.
It does not come with a mounting bracket or origional
manual. But, I have printed out the on-line manual for your
convenience.

It works just fine and has no problems.

Asking $135, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and
haven't gotten around to getting my amateur liscense yet. I need
the money more than I need the hobby.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

Bozo. Retard. Moron. Dipstick. Read allsafe's post again, stupid. If the NG gets moderated, kiss it goodbye. If there's one thing people can't stand, it's another person telling them what to do. No one would ever post here and you would be deprived of all this attention that you seem to relish so much.

His inflection was clear to ANYONE with a brain (which excludes people like you), so I will attempt to clarify it for you. Observe:

Moderated rec.radio.scanner = no posts = bad.

Unmoderated rec.radio.scanner = lots of posts = good.

Simple enough even for you.

Or better yet, famous words from CTIA Thomas Wheeler,
"There is no need for scanners in today's society,
therefore, they should be BANNED !" Who defines society.
As I said before, we are a part and we must speak up.
Society should NOT be ruled by Corporate CEO's, gov't
people.

The Puritans have died over 200 years ago and their ideas
that life is NOT to be enjoyed should die as well.
Nothing like living in the neo-puritan/politically
correct 1990's. There are only 2 years left in this
decade and many people like me will be happy when
it is over.

Yes, tell us exactly where when and how Bill Cheek blew up a satellite
dish. Otherwise, please shut the hell up.

>
> ------== Posted via Deja Loon, The Leader in Anonymous Flames ==-----
> http://www.parg.org/ Now offering more lies per minute, guaranteed.

You are fooling no one, Smackerel. The fact that you actually expect us
to believe something so patently ridiculous with no proof, no dates, no
times, no methods, no nothing shows everyone who you really are. Blown
up due to incorrect mounting...HA! The only thing that can happen there
is the stupid thing won't work. It certainly wouldn't blow up. But then,
you're a natural at talking out your ass about subjects you know nothing
about, so you would say it flew non-stop coast to coast under it's own
power if that would make Bill look bad. What a crock!

Truly a legend in your own mind, where there's plenty - o - room to
stretch out. See ya, wouldn't wanna be ya, Mack-turd. Have you met
Emilio yet, ya friggin' loon?

So many idiots, so little time...

>
> when I knew of you bill you lived in a differet suburb than golden,
> but not far from golden.

Then not only are you stupid, but you've mistaken
me for someone else. Truth? You ready for it?
I lived a few blocks west of the JeffCo Fairgrounds
at the upper (south) end of Pike Street. That, you
nescient imbecile, is....GOLDEN. Not close. Not far.
It *is* Golden.

> > opposed to down in the slums of Denver? Sheesh,

> want to talk about why you had to stay outside the municipal
> boundry of denver?

Yes, let's do talk about that. And then we'll talk
about that filthy hovel of a double-wide you stayed
in down there along the South Platte.

> > More'n likely, I dusted his britches from there
> > to next Tuesday..... hee hee hee

> no but i am sure you had yours dusted when you arrived at
> univ of colorado hospital after you blew up the sat dish! exactly
> how long did you spend in there bill?

Never been there. And other that driving through
Boulder and maybe sucking down a barley pop at some
of the pubs, I've never been on the UC campus. And
haven't been in a hospital since I was a kid, other
than as a visitor. So, again, you're either a
friggin imbecile or you have me mixed up with someone
else, or.....more than likely, BOTH.

> how was that life flight helocopter ride bill?

I rode helicopters throughout the Great American
West as a field engineer; never as a patient,
and never a "life flight". So, again, you're either
a friggin imbecile or you have me mixed up with someone
else, or.....more than likely, BOTH.

> > How the hell do you blow up a satellite dish?
>
> do you really want me to tell how you did it?

Yes, I really would like for you to do that. It would
be an interesting story since I NEVER had a satellite
dish in Colorado. And the one I have now is for high
speed data transmission, but I've only had it for maybe
three years.....and it works fine.

So yes, I would be interested in your cute litte
story, you friggin sot. Tell it, if you still have
the lugnuts. But get it straight, and do your homework
first. That means figger out who you're really talking
about. It ain't me, zitface.

I've been monitoring this group for about a month and I've searched a lot of Web sites, but I have not found a simple table showing which scanners are cell modifiable, separated by Type. (see below)

Does someone know of one? If not, does anyone want to create one and put it on a web page somewhere. With all the questions in this group about cell mods. It would be nice to have a place to send everyone.

Thanks,

You're the only one laughing. I wouldn't take $200 for mine. It is not only an excellent easily modified scanner but has large SCAN & MAN button buttons mounted on top (where they ought to be) so as to be found in the dark or without looking at the keypad. It stands erect without separate stand or fold-out belt clip (that never work on the Bearcats) to support it. It has a full-sized bright display. Great audio. I think it is underpriced at $200, let alone $155.

I found an interesting frequency during my lunch hour today. If you live in the L.A. area, listen to 167.3125. It's the FBI, following some schmoe around Santa Ana. Great stuff and for the most part comm's have been in the clear.

Today the subject was with his girlfriend. This is an excerpt of what I heard.

Agent 1: "What do you think of her?"

Agent 2: "She's..." [Encrypted mode activated briefly] "...U-G-L-Y"

Agent 1: "10-4. Those clothes she has on make her look fat."

Agent 2: "Yeah. She needs to wear all black. More slimming."

Who says the FBI doesn't have a sense of humor? I damn near fell out of the car laughing!

Had to go back to work, and left the handheld at home (dammit!) Hopefully they'll still be at it when I leave so I can have some drive-time entertainment. Enjoy!

Try this:

http://www.cdrom.com/pub/hamradio/oak/mods/

It's not as elegant as you would likely to prefer - but it's "fairly"
comprehensive - you will need to dig around.

And this:

ftp://204.210.11.204/faqs/scanmods.faq

Cheek's data - specific cell mods with date codes

And this:

http://www.qsl.net/n2mca/MODEL.HTM

Rich Well's surperb Scanner Model FAQ.

Hope this helps ...

>> cause harm to another person, or aid a person or persons in the commission
>> a crime?

I doubtless misunsedstand something, which is why the answer to this question that said the guy was busted made no sense to me. Or maybe I had sniffed too much glue. Or maybe someone else had.

As I understand the question, though, if you hear a "protected call asking for help, should you answer it by direction or otherwise.

I believe if you look in the federal regs about most anything, including any part of radio,, you will find something that goes after a fashion:

"Nothing in this part shall be construed of relieving the (operator, officer, person) of the responsibility of exercising good judgement" and another one goes like "Nothing in this part shall be construed to prevent the (whoever) from responding to (emergency conditions)."

Or, to put it like a cop from the FCC once said it to a class:

IF THE EMERGENCY JUSTIFIES IT, ALL BETS ARE OFF.

Of course, then you got to justify it.
Your cat in a tree and you late for work don't justify you modding your CB to transmit 500 watts on the police channel.

OTOH, If you need a 5 watt rig to tell someone that the Jamestown Dam is about to collapse again, and all you got is a 5000 watt rig on the wrong freqs and you know that you can make it splatter all over the bands by shouting,

THEN LET 'ER RIP!

Saving life and/or property seem to be the guideline.

I have an RS PRO60 and have had it for almost 2 years. At first I was trying like crazy to find out if it could be modified to receive cellular telephone transmissions. Thanks to this newsgroup, I have learned a great deal concerning the laws governing the interception of cellular and cordless phone conversations. (ECPA). My question (to those of you that have scanners with cell capabilities) is: Does the fact that a scanner can receive cell transmissions justify the cost of these used scanners? What are the interceptions like (broken conversations? One sided?)? Do you have to be near a cell site? I figure they are as hard to track as a trunked system...is this correct? Just curious.....

Yeah, the mere mention of cell brings out all the "scanner cops" who
will tell you you can't. Don't they know nothing makes ya wanna do
something more than being told you can't??

My question (to those of you that have scanners with
> cell capabilities) is: Does the fact that a scanner can receive cell
> transmissions justify the cost of these used scanners?
Not really. Remember the "mint" 200xlt? I've seen some good deals in
here though.

What are the
> interceptions like (broken conversations? One sided?)? Do you have to be near a
> cell site? I figure they are as hard to track as a trunked system...is this
> correct? Just curious.......
There are so many frequencies it is almot impossible to follow a
conversation completely, especially if the guy is on the move. In some
areas, you can only hear one side of the conversation. I'm not sure why
this is, but I do believe it is intentional, to deter scanner users.
Other tricks that the cell industry has done is using frequency hopping.
Most of the time, the frequency will only change if the signal
deteriorates, HOWEVER, I have noticed lately that even strong signals
are moving around. Again, I think this is intentional to deter
monitoring.

Cell is strictly a matter of taste. When I opened up full 800 on my
scanner, naturally I was fascinated by the very personal things people
say over a cell phone. I have even heard some idiots do their banking
with one! I wonder how many crooks now have their PINs and account
numbers! Anyway, at first, it was very exciting to listen to, but after
about 2 or 3 hours, I was ready to go back to the police bands. Every
once in a while, if the local PD freq's are slow, I'll peruse the cell
band, but I don't think it's anything that people should pay extra for
in a scanner. Most scanners receive cell images anyway, which requires
no modification whatsoever. Again it's personal taste. If listening to
phone calls is important to you, then you need a modifiable scanner. If
it's not a big priority, don't worry, you're not missing much.

A notice was sent to the appropriate people at ctc.edu.
I suspect this janitor will be posting no more.

To whom it may concern -

If you must forge posts - at least put more effort in it. Sophomoric at best.

42.600 Was the Barracks to Barracks frequency many years ago. This is no longer used as PSP maintains a private phone system via microwave which links all the barracks in the state via phone. No need for this channel any more.

>...until I happened to pass within about 1/4 mile of a subbarracks on

Many of the barracks have the bases still installed at their locations, if they work I would be surprised.

My next best guess on who was using these would be the Game or Fish Commission since they use 45MHz area for their communication. Possibly PSP has transferred this for their use or is used to obtain vehicle/license info.

>Some old directories list this as a "base-to-base" channel. Does PSP
>still use this frequency? Is it a back-up to get state DMV info when the
>Commonwealth Law Enforcement Agency Network goes down (which it does
>constantly)? Or was I listening to skip from God-knows-where?

If CLEAN is down their is only one way to get the info and that's to call PennDOT in Harrisburg and follow some very tedious security procedures to get them to do it by hand. Most times it states "manual assistance is not available." Since they don't want to be bothered.

What barracks did you have to hear this at and was it PA information being given?

I must confess to perussing this NG first to catch the latest retort
from Bill Cheek. I have never read any of his books but if he ever
publishes a compendium of invective,incivilities, retort etc I would
buy a copy. I believe all his responses to his detractors are
originals and not plagiarised. Although composing all his wit probably
detracts from his more serious technical contributions to this NG

The horse thinks one thing, and he who saddles him another.

3158. Re: Advice needed: Which type of coax to run to the antenna?

Newsgroup: rec.radio.scanner
Date: 1998-06-23 00:00:00 UTC
From: dmi853@swbell.net
Message-ID: <358FA5C4.36B99B3F@swbell.net>
Source record: 155769

I have been called a lot worse then that Phil :)

And also for Mackey, The conversation was about using the gas pipe as a grounding rod for radios and a antenna, it was not about whether or not to ground the gas pipe to the household grounding circut as that is an entirely different subject.
Your comment can easily confuse someone who has no knowledege of electrical circuits and their associated grounds and is why I covered the subject like I did.

I don't want someone thinking they need to run a wire from their antennas ground rod to the gas pipe as that is against code also .
One direct hit to the antenna and one bad connection on the ground rod the current is going to follow the path of least resistance and that is going to be the gas pipe.

So next time you decide to interject a remark think before doing it, the life you save may be of the person who misunderstood your comment and is now hooking the wire from their antenna grounding system to their gas pipe.

Don't plan on it being for $40.00, a local pawn shop had some stuff I
wanted, I made an offer he refused I told him he might as well because he
would not get what he was asking, he told me he knew it but, instead of
cutting the price he would donate it to a charity and put twice what he was
asking on the receipt, and take it off his taxes.

> Trunktracker series... except that I don't know where to start...

Not sure where you're getting your prices from. I bought my BC9000XLT
almost three years ago for about $350.

As for the new TrunkTrackers, the base model BC895XLT is a great radio
and highly recommended.

For a good Uniden dealer, try CEI at http://www.usascan.com/

> Does anyone have recommendations on what scanner is the best value and has
> the most features?

Depends on how much money you have to spend and what capabilities
you want. You can get just about everything these days but you'll
have to pay for it. And do you want a base model? Or would you
be interested in a portable/handheld unit?

For more questions, see my Picking A Scanner/Receiver page :

http://www.qsl.net/n2mca/PICKRECV.HTM

> Can someone explain how the memory system works on these
> scanners and what all the questions about the scanner's banks
> on this forum are about?

Not exactly sure what you're referring to. A bank is composed
of channels, each of which are used to store a frequency that
you wish to monitor. Each scanner/receivers has so many channels
which are usually broken up into multiple banks allowing you
the ability to logically group your listening interests. For
more details see these pages :

http://www.qsl.net/n2mca/STARTING.HTM
http://www.qsl.net/n2mca/GLOSSARY.HTM

It's best to use a spectrum analyzer to observe them.
The digital modulation produces a wide footprint and
an ordinary frequency counter won't have a clue.

Hi Bob, (and all)

I use a HP 8656a spectrum analyzer with an Octave Assoc.
variable band pass preamp in front of it, but still need a scanner
(disc out) and pulse signal grabber to get an "actual picture"
of the code on the modulated waveform. I sample every 15
milliseconds and usually "zoom" to 2 or 3 samples to get an
accurate display of the pulse train code.....(it just repeats over and
over)

>those in need.

Some do, some don't. An amateur license doesn't make its holder any better than
anybody else, as you seem to think. Your post may well be one of the silliest
I've read in a long time.

That makes no sense. Why ground it? To make SURE that a hot lead touching it will make a spark? Sounds pretty stupid to me...of course it wouldn't be the first time a stupid law like that was written.

-Phil

Ummm hummmm, I figgered that.....and the answer
is easy...."coverage mods" are not possible
whatsoever. There still are dozens of mod
possibilities, but.... a lot depends on what
you want and what you can do for yourself and
even what you can figure out for yourself.

If you take "Dong Tong Wah" and "Bill Cheek" and rearrange the letters, it comes out as "Tennelec scanners were really kewl" which is an obvious clue.

Frankly, Mister Up Yours, I don't give a flying,
fresh picked booger for either what you "see" or
whoever it is you so liberally include as "we".

You can take your "see" and "we" and pack 'em
right up your booger chute.

Is that clear now?

So buzz off and take your anal retentive
"see" and "we" with you.

>I will be spending some time in Hickory County MO-- the county seat is
>Hermitage near pomme de terre lake. It is a small county in the Quad lakes
>regon just south of the halfway point to Springfield from Kansas City.

155.73 and 155.73 is county-to-county and county sheriff. Bolivar, Missouri is the closest town of any size, and they use those frequencies plus the inter-agency frequency of 155.475 and a local government frequency of 155.025.

Buffalo, MO, uses the same and 154.80. The whole area is really quiet, though you might hear some medical action from the new heliport that was recently built at Buffalo. Dallas County (Buffalo) uses 154.785, which may be their "hidden" frequency.

All the police units in those areas operate on 155.73, 155.37 and 155.475 including the counties.

Several years ago, the Urbana, MO, bank (12 miles N of Buffalo) was robbed. The crooks set fire to a field, and while everyone was fighing that, they robbed the bank. The Dallas County sheriff had a roadblock set up, but the crooks stole a truck. He recognized it and waved it on through without checking it. They were caught in South Dakota, I think and sent to Buffalo. They used a broom handle to break through the chicken-wire mesh cell door and escape. We were listening to the scanner when the sheriff at Warsaw, about 40 miles away, caught them.

It was quite interesting sitting across the lake, watching the manhunt going on just about 250 feet away, but separated by lake Pomme de Terre.

All the fire departments use 154.28

Honestly, the five or six counties around there all use just those three or four frequencies. There really isn't a lot to hear.

The Missouri hypos use 42.06, 42.12, as does the Water Patrol.

I don't know if you'll be close enough to hear Springfield. Seems to me that when I lived in Springfield around 1983, I could hear all their fire and police channels on a 6-channel handheld.

Now Branson would be interesting to monitor.

>to ramrod the data in there? I figure you for a hardware man; not
>software, so is it with a terminal program sending serial data?
>After all, those are serial EEPROMs.......

No, I'm a software guy. I know just enough about hardware to
be dangerous. The software in question is my own creation.

>Admittedly, a superior methodology with just one teeny weeny
>drawback......you can't remote control the PRO-43 from the PC
>keyboard, right?

Actually, I can. What I've done provides a mix of _some_ of the
functionality of the CE-232 and the Opto interfaces. I can
program the memories as well as have the PC take control (scan
thousands of frequencies, do smart searches, track multiple
Motorola and G.E. trunks, etc.)

Not bad for $10 worth of hardware ($5 if you skip the
slicer/trunking) and an 8MHz or better PC. I had to make the
software run on dinosaurs, since the only laptop I have at the
moment is an old Zenith 8088 beast and I need my mobility!

>Did you ever publish that mod of yours for the PRO-43, and if not,
>would you like to?

Well, here's the problem; I've seen lots of the following...

>If the block is due to programming in the firmware, there
>is no way for the computer to make the syntehsizer tune the "taboo"
>freqs.
>
>For a time, some radios were configurable due to discrete components.
>Such as remove a diode or resistor and you had coverage.
>
>However, today most radios take the firmware approach so there
>is NO way to get the stock scanner to tune cellular.

...and...

>I got into an argument once with someone else, and I was proved
>wrong. At least with all scanners *made* in 1997 or later, they
>CANNOT be unblocked.

...and those sentiments just don't jive with my experience; I own two modded 43's (an older unit with a GRE-915 CPU, and a newer one with a 'blocked' GRE-9326 CPU - model AA020-300A, s/n A004378), and they both have an identical mix of AM BCB (1.050 MHz), CB (27.185 MHz), TV audio (191.745 and 733.745 MHz), and 880.020 MHz programmed into the regular channels along with the usual mix of local 800 MHz emergency services frequencies, WX freqs, etc. The "cell-blocked" unit has the search limits programmed to 824.010 to 849.000, while the older unit has a somewhat less common search range of 26.960 to 27.410 programmed at the moment.

As you know, even the cheesy VD mods are under attack from epoxy blobs. I'm much happier if everyone (including your feds) is of the opinion that today's scanners are secure. I don't want to give them a reason to argue that scanners need even more epoxy spread about. BTW, if any feds are reading this, I'm just yanking Bill's chain.

>Sounds worthwhile from a human angle and since the PRO-43's market
>"life" is long over, what the heck?

Since the mod can be applied to current and future scanners, I'd rather not fan the flames.

>Off the wall, did you ever do that shortwave mod to the PRO-43 and
>if so, did you do any front end rework?

As I posted many moons ago in SCANRADIO, I just bypassed the 30-54 BPF and it works fine. I get many stations with a random wire antenna and an impedance matcher. Lots of different languages - Spanish, German, French, Chinese, and lots of programming - news, music, religious nuts, along with the highly entertaining programming of WWV and CHU. :)

Certainly not as sensitive as a cheap SW receiver, but it is nice to pick up local AM broadcasters. Hell, even WBZ 1030 from Boston comes in nicely here in Toronto. I always wondered why the mod was touted as extending coverage down to 6 MHz, when reception is fine down to 0.5 MHz.

>> BTW, I've always thought that a nice feature
>> would be "temporary lockouts" for channels that act up due to
>> interference or have boring comms on them for a while; All
>> temporary lockouts could be removed with one keystroke...

>Let me add a flourish to your wish list....how's about a
>programmable time-out in addition to the manual override with a
>keystroke? Like after 24-hrs, reset all temp lockouts to normal.
>Or any time the user wants within reason?

That's acceptable, as long as I could make the timeout _very_ long, i.e. disabled!

>The PRO-43 doesn't have a clock, per se, but a countdown timer
>might could see some good duty in that capacity, no?

Not sure how the '43 got dragged into this! Obviously, it doesn't have the guts to do the job, but an appropriate microcontroller with appropriate programming could handle timekeeping along with the usual scanner operations. The microamp drain when 'off' would be no worse than that used to keep CMOS RAM chips alive.

...Andy

> Hellooooooo Jerko. Posting from Dejanews, how quaint......

Hey, Phil....Neutrodyne...Inigo, and others:

Guys like this "Clarence Green" aren't worth it. Look
at the 2nd grade English the guy used. Look at how
he went on and on and on, rambling about this and
that with nothing that can be verified or even
looked up.

The odd thing is almost everything he said WOULD
have been true had it been phase-reversed 180-degrees.
Obviously, the guy knew me or knows someone who
knew me in Colorado. But the thing that will emerge,
if anyone cares to do any digging....is that I
left a great reputation behind me up there in the
High Country of Colorado.

Heh heh heh, and the guy wonders why I lived in
Golden, Colorado high up on Green Mountain as
opposed to down in the slums of Denver? Sheesh,
that question is self-answerable.... Besides,
the radio location was utterly superb....which
is probably why the guy's hide is still chapped.
More'n likely, I dusted his britches from there
to next Tuesday..... hee hee hee

Sure, there were some enemies in my backtrail, but
most of them wouldn't spout the crap this Clarence Green
did. But the icing on the cake is a simple question:

How the hell do you blow up a satellite dish?

Dynamite is about the only thing I can think of,
and had I done that, it would've only added to
my legends. hee hee hee hee....

Hmmm, come to think of it, I wonder if this
snotball somehow had HIS satellite dish blown

up and thinks I did it? <snicker>

Anyway, guys like this one just ain't worth it. They have a way of crawling out of the woodwork when I get back to work and twit out certain idiots. So one has to wonder if it's the one and only.....you-know-who? I ferget 'is name right off.....

hee hee hee.....

Hey guys:

Our fine-feathered "Clarence Green" posted another
note under the thread "Re: Rub Bill's nose in it Mackey"
as repeated below.

Notice how the cat's "English" is a lot better? And
the "meter" of the sentence sure is a DNA print of
someone else we know.....

Hmmmm. Makes ya wonder....especially since "you-know-who"
appears to be getting his posts canceled as fast as
he can send 'em.

Hmmmmmm.

I'll take a Monte Cristo that you icebergers never
outlawed like we did down here stateside. I'll
tell ya what, Canada has more goodies and neat
things about it that a body can experience in
fifty lifetimes, but the Monte Cristo's rank way
up there. You lucky devils, you..... Yeah, I know,
Monte Cristo's don't originate in Canada, but that's
okay. I used to play like they did. :-)

> No, I'm a software guy. I know just enough about hardware to
> be dangerous. The software in question is my own creation.

Well knock me over with a Monte Cristo......

Well, this thread has about played out and run
its course, but if you don't mind, I'll try to
continue it by e-mail one of these days soon....
when I get done putting the fine touches on "busy".

Of course, you'll have taken up where I left off
by then....but we'll see. Interesting stuff you've
done, that's for sure.

As a frequent rrs reader, I respectfully ask that Mr. Cheek and Mr. Mackey refrain from flaming each other for 48 hours. From the posts I've observed over the past several months, I feel that this is the sentiment of most other regular users of this newsgroup. I do not read any post that contains the name of either of the above individuals, but I do find it annoying to find so many senseless posts and quite immature that intelligent, grown men would not respond respectfully to the wishes of the majority of users in this group. I have benefited and gained knowledge of scanning and scanners from the FAQ's posted by Mr. Cheek and hope that this information will continue to flow. Recently it seems that the responses carry (sometimes) a bit of attitude with them. Please help this group maintain some civility by behaving respectfully of each other and all other members of this group...at least try for 48 hours.

Of course not! The Discriminator is located in an
UNSQUELCHED part of the circuit.

You can try tapping baseband audio down line from
the Squelch control, but that's "ify" due to the
probable voice band filters that reside downstream.
But in a word, try various signal points between
the Squelch control and the volume control. To
go beyond the Volume control will prove futile,
but you can try up to and including the high lug
of the volume control.

Oooooohhhh, do I hear a "challenge" coming on?
Cool! Wow! Far out! <Licking chops>

> Oh, I'm sorry, I forgot to kneel and bow at your feet.

Ohhhh Geezus H. Kriste, I knew it was too good
to be true. For a minute you had me there. I
thought you were going to whup some hot brain
power on me.

Oh....and don't kneel. It gives straight men a bad
name. Observers just wouldn't understand. You
can send money, though, if that would make you
feel better. Otherwise, do a little swishing
and sacheting and speak up - make your intentions
clearer, okay?

> Yeah right you freakin' loser.

Really now? <checking resources, checkbook, wallet,
computational facilities, radios, etc......>

Ummmmm, sorry, no. I haven't lost anything.
Well...nothing of value. Just you. But that's
okay. I don't mind. I needed to make my weekly
charitable contribution anyway, so I hereby
willingly and of my own volition choose to lose
you to the vultures, predators and dung-eating
vermin of the world.

Sorry, pal. You've just been contributed.
Now beat it......

Sure you can. Its more like a receiver, not a scanner since you have
to key in the channel # you want to listen too.
A simple web search will tell you how.

I presumed when I was making my earlier post that I was speaking to individual with common sense. Of course, I should have known that there would be one or two exception! Anyway, I was speaking of copper (fresh & cold) WATER pipe. Anything carrying other than fresh cold pater is NOT acceptable.

Important note: SOME states, such as Washington, require the gas pipe to be tied into the common ground of the home. But nothing else may be connected to the gas pipe.

It's a 20 channel scanner, and the price has dropped to $10.99, but I
doubt it matters any since the chance of finding one now is about as
the same as finding a pro-2006 next to it...

3232. Pa. State Police: What's 42.6 MHz for?

Newsgroup: rec.radio.scanner
Date: 1998-06-23 00:00:00 UTC
From: Jason Togyer <jtogyer.notforspam@westol.com>
Message-ID: <358F33DF.7995@westol.com>
Source record: 155892

Any yinzers out there that can answer a question about Pennsylvania State Police and a possible low-band allocation?

Police Call shows 42.6 MHz as a PSP frequency licensed to practically every barracks in the state. But for years I've ridden around with 42.6 programmed into the scanner in the car and haven't heard squat, even when I was in the parking lot of Troop A or B headquarters.

...until I happened to pass within about 1/4 mile of a subbarracks on the interstate several months ago, when 42.6 suddenly came alive with someone reading OLN's and license numbers. It faded out quickly and I've never heard it since. A half-hour later, I passed the same spot, and ... nothing.

Some old directories list this as a "base-to-base" channel. Does PSP still use this frequency? Is it a back-up to get state DMV info when the Commonwealth Law Enforcement Agency Network goes down (which it does constantly)? Or was I listening to skip from God-knows-where?

Any answers you can give me (any troopers lurking out there?) will be helpful. Thanks!

I thought this would be simple common sense but there are a few individuals who mis-understood. With the part above about copper pipe, it must be a FRESH, COLD WATER copper pipe. Copper pipe carrying gas, hot water, grey water, etc is NOT acceptable. For further questions please reference the NEC book (National Electric Code) & local codes.

Note: local jurisdictions may have different requirements as they see fit. Example: State of Washington they ground the gas pipe, the State of Oregon it is against code to have a gas pipe grounded!

allsafe-

Usually you only post stupid crap on here only meant to start trouble.
But, this time is different!!!! You are probably on to something!

Now just last night I proposed a 7 day "stay" on all falming & other
type
of messages. Most have chosen to ignore the "stay". :(I am going to
honor it, so this is NOT a flame. (although none of my messages are
flames anyway)

Your suggestion of a moderated NG is good! However, rather than start
ANOTHER newsgroup to be moderated, why not just moderate THIS
NG! We could all elect to appoint a moderator!

THIS would be the answer to many of the problems. A moderator would
help ensure that only on-topic posts are presented & those individuals
who post off-topic would be dealt with by the moderator!

Even Bill Cheek would support a moderator as indicated by his rein
as moderator of scanradio in Fidonet.

LETS GO TO A MODERATED SYSTEM ON THIS NEWSGROUP!

Why don't you bother to READ first?
You're a day late and a hundred bucks
short. I already twitted out undesirable
persons and am not replying to them.
Do you want to be one, too?

> From the posts I've observed over
> the past several months, I feel that
> this is the sentiment of most other
> regular users of this newsgroup.

The Usenet is, by its very foundations,
an anarchy - not a democracy. That's a
fact, fella. Secondly, you are NOT empowered
to speak for ANYONE else, much less any perceived
majorities.

Thirdly, and most importantly, if you could
learn how to control your own computer and
its software, then you could not possibly be
victimized and molested as you seem to be
sniveling about now.

> I do not read any post that contains the name
> of either of the above individuals, but I do
> find it annoying to find so many senseless posts

Well....DON'T be annoyed. You can control
that, too, in addition to controlling your
computer so that it doesn't pry open your jaws
and cram "senseless posts" down your gullet.

> and quite immature that intelligent, grown men would not
> respond respectfully to the wishes of the majority of users

I hate to break it to you, pal, but majority,
schmority, the Usenet is anarchist by its very
nature. Deal with it. You can, you know.....

but if you feel you can't, then perhaps knitting
or crocheting would be a more suitable pursuit
for you.

> Recently it seems that the responses carry
> (sometimes) a bit of attitude with them.

And.....YOURS doesn't? Well, pal, you whupped
your "attitude" on me first. You'd NOT have
gotten mine had you (1) read the threads FIRST,
and (2) been able to leash and kick the snot
out of your computer for mistreating you so badly.

> Please help this group maintain some civility

This group is as civil as you want to see it, or
as uncivil as you please....take your pick. But
keep your sniveling to yourself. Read the posts
that interest you and don't read what doesn't
appeal to you. It is that simple. And then if you
will bother to learn a little something, you can
employ automation to do most of the choosing for
you. It is within your power, and it is YOUR
responsibility - not anyone else's.

> by behaving respectfully of each other and all
> other members of this group...at least try for 48 hours.

You know what they say, dude....charity begins
at home. I'll add "respect" to that list. Now
take a baseball bat and beat the tar outa that
misbehaving computer of yours and teach it to
be more respectful of you.

I'll guaran-damn-tee you it will work. Get real.
At least, don't impose your standards on the
Usenet where you are guaranteed to be sadly
disappointed if you persist.

The PRO-43 is an excellent triple conversion
receiver that does not receive "image frequency
interference."

Fred,

The channel question is easy, the knowledge I have is that cordless phones have maximum 120 channels from which to choose, inlcuding the 1800 MHz one I have.
The test mode enables your handset to 'navigate' each channel, pressing certain number keys which vary between models.
As for the codes, if those 2 billion codes are available, how is one of them assigned to an individual unit? How does the base know that the phone that just came on is an illegitimate one? Don't tell me that the system is as sophisticaded as off-the-air key exchange, A5 encryption, and multi-level security...
With my digital cordless, it just has AFSK modulation, and strange channel spacing, but there is no problem 'joining' a conversation with another unit.

I think if I remember correctly you will have to experiment tofind the
correct measurements for freqs that high. I don't think the specs go that
high. I does work though, I set one up on 161.XXX at work. Works great.

Good luck

3254. Re: Mobile CB antenna for a scanner?

Newsgroup: rec.radio.scanner
Date: 1998-06-24 00:00:00 UTC
From: Howard <Howard*V@Bigfoot.com>
Message-ID: <3591C552.19D28A53@Bigfoot.com>
Source record: 155465
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm also using the radio shack "cellular look alike" antenna for my BCT-7. It's pretty tough to pick up CB signals unless they're very close and the squelch is turned up pretty high. Highway Patrol (here in California) is also difficult to pick up with the cell look alike antenna. When I'm driving to Vegas for 5 hours, I also use a separate CB antenna and a separate long whip antenna (tuned for the 44 mhz frequency) to try to get away from tickets. Even with all that, luck plays a big roll!

The radio shack cell-lookalike antenna is a good all around antenna for cruising around the city. I don't want to attract attention to my car with other types of antennas. Here in Los Angeles, almost everybody and their mothers has a cell phone antenna on their cars, so your car doesn't stand out to potential thieves.

I've also tried my CB antenna on my scanner. Both CB and highway patrol come in pretty well with the CB antenna, but the higher frequencies come in pretty crappy.

Good luck - Howard

Shouldn't have had that fire the other night, Ken!

Check and see if the coax is melted. Seen this situation before.

In GENERAL, bigger coax is less lossy and therefore better. Cable TV
cable like RG-6 will be better than RG-58 since it has less loss,
even with the impedance mismatch (which is only 1.5:1 anyway).

Regards,

David

I didn't get the email bomb because that isn't my real email address. I have since changed that, so now I can receive internet mail.

I do give the following statements/warnings to whoever it is that would like to "mail bomb" me, as listed above.

1. Files larger than 1MB in size are automatically rejected by our mail server.

2. Hughes Space and Communications (my employer) is a government contractor who can and will invesigate any such attempts to breach their network security, and treat said attempt as an attempt to gain unauthorized access to sensitive government documents. You could be arrested and prosecuted for espionage just because you tried to play a joke on me.

3. Most importantly of all, I will flood your server with email bombs, concurrent connections, virii, and other nasties from all over the world. I will publicly humiliate you in every usenet newsgroup you frequent. I will find my way into your server and turn your personal site into the next Gay/Lesbian/Gerbil Fetish/kiddie porn site and invite several local and federal authorities to check out *your* handywork. And this is just for starters.

That out of the way, I leave it to your good judgement and desire to avoid a criminal record, to do the right thing and just drop it, right here, right now.

Your call.

-Phil

Yea, "almost", but not as good as 213, as you state above. RG-6 can
be used, but it is a compromise.

He asked what was best.

I'm sure it is important. If you did cut it, the unit would probably stop
working. Resistors are very important in circuits.

It is not uncommon for RS coax to sit on the hook in display next to a
window a year or two.

Notice I started saying "IF the coax has been.....". Regardless,
once he installs it, that clock will start ticking unless he
puts it in conduit.

Same here. I had the wrong address in my headers so I didn't get the
email, but if I did AND if my mail server didn't automatically reject it
(which it would have) It would take maybe 2 seconds to download it from
my mail server, with MASSIVE net traffic at the time.

I hope the idiot sends me another one, God will I have fun. First, I'll
initiate my own mailbomb program which emails the recipient (read
victim) the obcene phrase of your choice indefinitely until it's
stopped. It's so slick, you can plop it on any computer at your local
library, and there it sits in the background, popping out messages
undetected. I could make a whole day or two of driving from library to
library to library. There are about a hundred of them here in Southern
California. Multiply that by each internet station they have (most have
at least 6) and you have enough traffic to kill ANY server, guaranteed.
I figure it like this:

Each copy of the program will pop out about 5 emails a second on a good
fast t-1 connection

There are an average of 6 to 20 net stations in each library.

There are about one hundred libraries I can get to in Southern
California.

That would mean anywhere from 259,200,000 to 8,928,000,000 messages sent
to Bozo a day, assuming the machines are left on at night. And it would

take several days or even weeks to find and shut them all down. What's more, the program is named in such a manner that seeing it in a task list would not raise any undue alarm, and it installs itself in such a manner that it runs everytime Windows runs.

Then I'll go on to more....malicious things.

I know what you are thinking: Why mention this? I don't know, maybe the moron will think twice before starting something he'll regret. One can always hope.... that he won't....ha ha... HA HA... MUWAHAHAHAHAHAHAHAHAHAAAAAAAA!!!!!!

The best test of all, everyday use. I set 2 identical scanners side by side same antennas just different coax. RG6 out performed RG58 by a mile but was comperable to RG213. The advantage to RG6 is size much easier to work with and cheaper last time I checked.

If a person has the money and smaller coax is not required Belden 9913 is by far the best, but not everyone can afford it.

John, like it or not, you are not the god of scanners. We are all here trying to help eachother and most help is from experience. Just because YOU don't like something is no reason to tell people it doesn't work. It's too bad you can't respect other people's opinions instead of ragging on everybody, it now becomes very clear why you are so disliked in this newsgroup.

As I stated before ... Get a life or shut-up and climb back into your little hole!!!

Mike

>>
>> IF THE EMERGENCY JUSTIFIES IT, ALL BETS ARE OFF.

Don't bet on it. A couple of years ago a ham and his friend were mountain hiking out west somewhere (sorry, I don't recall exactly where) when the friend lost his footing, fell and was seriously injured. The ham tried repeatedly to raise someone on ham frequencies but could not. Finally, in desperation, he used his heavily modified handheld to call the local Sheriff's Office on their frequency. Despite the fact that his friend would have died had he not gotten help quickly, the ham was arrested, his amateur license suspended and his radio confiscated. As I recall, the criminal charges were eventually dropped, but I don't know whether he ever got his license back, and the last I heard the Sheriff was refusing to return the radio since it could be used to transmit on public safety frequencies.

so what? his friend lived, right? what is more important, having that radio, or having the person's life saved???
so he lost a radio...big deal...if it was me who was hurt, i'd buy you 2 new ones...
He was allowed legally to use any means at his disposal to get help. I do not expect the local Barney Fife to know this, and would expect to be arrested. But I also would expect to eventually be exonerated. What jury or judge would fault him? A decent lawyer could get his radio back, as there is no law against owning a modified ham rig. the use of it is another matter, but they can't take it just because you MIGHT use it.

John-Mackey-KA0SSF <KA0SSF@parg.org>blows another snot bubble:

>It is not uncommon for RS coax to sit on the hook in display next to a
>window a year or two.

Yeah. In a box. Or if it happened to be out of the box, coiled up so that only a few inches .. maybe a foot .. might be exposed to indirect sun through a window. Hardly the same as an outdoor installation. Actually it would be uncommon if the store is owned by Radio Shack, because their floor planning calls for coax to be at the back of the store. Usually any windows are in the front.

>You claim to haved passed an extra class amateur test, <<

I have never "claimed" anything of the kind. The particulars of my amateur license are a matter of public record, so it wouldn't matter what I "claimed". Where do you see me "claiming" anything about passing an extra class amateur test? Crayon fumes getting to you?

> you should know yourself! <<

I do know myself. I've known myself since I was a little kid.
I also know that in a typical scanner application, the kind of impedance mismatch to which you referred would make little if any discernible difference in reception.
Geez, I think I liked it better when you were spending your time forging posts.

"Ryan Faricy KC0DSZ" <jtonsa@worldnet.att.net> acts like a man:

>Yes, I know. I stupidly said that for some, well, stupid reason.

You've gotta hand it to the kid. He's man enough to admit when he's made a mistake.
Too bad one of his elders who lives across the river from Clark College isn't nearly man enough to do the same.

First off, the friend, although injured, was not a life or death
situation.

Secondly, he was never arrested.

Thirdly, his license was not suspended.

Fourthly, his radio was not confiscated. He chose to forfeit it,
instead of the SO pursuing charges.

Fifthly, there never were criminal charges, so they were not dropped.

The day after the incident, he was asked to come into a meeting
at the SO, and the FCC was present at that meeting. During
that meeting, he was asked to forfiet his radio, instead of the SO
pursuing charges.

>be used, but it is a compromise.
>
>He asked what was best.

Here we go again John! Why do you lie so much?

I can't see where he asked for what was best, if he did, and
that is what you based your answer on, then you lied when
telling him 213, as there are MANY other methods and cables,
such as hardline, which would be better.

If he did not ask what was best, then you lied when you stated that
he did!

Please, try to use some honesty in your posting!

You didn't offend me. It is preferable to get a little flaming
for a boo-boo as opposed to accidentally delivering the incorrect product
and having a dissatisfied customer.

>>BTW: I love the Pro-64. The best $150 I've ever spent. I also bought an
>>HTX-202 (great ham xcvr!) for the same, so that's another $150
>>well-spent.
>>Radio Shack service is very bad, but most products are pretty good.

I love it too. It's relatively fast, triple conversion is great,
it's compact, etc, etc. Best $100 I ever spent.
I had a hard time finding it at that price too, had to have the
manager at the store drive up to another store and pick one up. Service
may be bad from HQ, but service is pretty good when dealing with that at
the store. It also helps to know the manager personally. ;)

>>If ignorance is bliss, why aren't more people happy?

I have a couple of questions, is there a place where I can find the frequencies used for cordless phones, and especially a place that lists them by the developer (e.g. Panasonic). I need to find out the MGZ for my cordless phone.

Also, if a scanner has 50khz steps, and a frequency is at say 901.0501mgz will my scanner pick it up?

Thanks!

First, I don't know why you keep attacking me (or just sending me rude messages), but:

Look at the headers!

From: "Dong Tong Wah" <dongwah@san.rr.com>
From: "Bill Cheek" <bcheek@san.rr.com>

Notice - both are san.rr.com, and as D.P. Roberts pointed out, "Bill Cheek" and "Dong Tong Wah" come out to be "Tennelec scanners were really kewl" when the letters are rearranged.

Another clue is that dongwah@san.rr.com doesn't exist, but bcheek@san.rr.com does exist!

A repeater transmits ONE signal to MANY receivers, also known as a
semi-duplex transceiver (you can only receive when you're not transmitting,
but it uses two frequencies, an input and an output). Amateur radio
repeaters are examples of this. You don't hear a full-duplex conversation.
You only hear one side at a time, and when the other is transmitting, he
cannot receive audio (unless he has a dual-mode transceiver, explained
below).

You are thinking of a full-duplex (also known as dual-mode) transceiver (you
can TX and rx at the same time on two frequencies). Cellular and cordless
phones are perfect examples (very much alike). You don't call a cordless
phone's base a repeater, nor would you call a cell tower a repeater. It
doesn't repeat - it only transmits!

There is a difference. But, if you want to get technical and name the person
calling the cell phone user part of the cellular system, the cell tower
still cannot be called a repeater, but it can be called a relay transmitter,
since it relays the calling conversation to the cell phone.

I didn't say that. I just said it is a level of importance. I only said I HAVE a POCSAG program -- I never used it, but I know many people who do, and this program works for them. I don't care about pager messages.

ALSO, and very importantly, pager transmissions ARE NOT ENCRYPTED, they are only encoded digitally. It is still illegal to listen, let alone decode, pager transmissions, but since you feel you must attack me because you've nothing else to do, you will be happy to know I don't listen nor decode these transmissions.

Encoding and encrypting are two VERY different things. If you feel you must attack me on this too, LOOK IT UP! Try the dictionary.

Tandy Electronics National Parts
Tel: 800-442-2425
817-870-5600

Give them a call and they should be able to help with the Battery Case.

The PRO-26 Service Manual does not list (or didn't) a RS part number for
the case but details the "manufacturers Part Number" as GCAS231854Z
athough M2-31854G1-HG is stamped in the case.

You may also require the three battery contacts/springs which are also
listed as seperate items and might not be supplied with a case - have to
check.

Hope that helps.
Cheers,

3326. Positioning of RS antenna # 20-014

Newsgroup: rec.radio.scanner
Date: 1998-06-24 00:00:00 UTC
From: chuckiex@ibm.net
Message-ID: <Loyunz0gstF5-pn2-pzcwTDwgKI79@localhost>
Source record: 155582
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Having just exchanged my RS discone for their All-band Monitor # 20-014, I can discern a distinct advantage of the All-band Monitor. Plus, that thing is one large dude! <g>

Anyway, I had a question concerning the positioning of the #20-014 and wanted to understand how best to place it for maximum reception. Being that the upright portion has three different lengths but runs in a parallel manner, I thought it best to place these at right angles to the direction I wanted to receive rather than inline. Is this correct thinking?

Thanks!

Charles

John H.,

I am contemplating purchasing the last two PRO-508s for use in tapping the discriminators hoping to be able to utilize the trunking software and these two scanners to accomplish the same thing as using a BC235XLT or BC895XLT. However, I now realize that these PRO-508 models can receive no signal above 512MHz and had second thoughts.

Would you know if I can do what I envision with these PRO-508s or not?

Thanks!

Charles

ishyguy@idirect.com

for sale: one bearcat 760xlt scanner (has not been modified for cell,
don't know if it can. i can hear cell calls in the 814mhz area) comes with
built in ctcss tone board, and external signal meter and circuit. It also
comes with a g-wiz erricson and GE trunking tone eliminator board (removes
buzzes,hums and tones from trunking systems and allows your scanner to
immediately resume scanning).

this unit is in mint condition, only 6 months old with original box,
manuals and accessories.

it is a 100 channel base/mobile (5 banks of 20ch)
includes 800Mhz. will sell for 285.00 includes shipping

thanks to all interested

Hi there,

I have a Radio Shack mobile magnetic mount celluar-lookalike antenna in my car. I just got a PRO-91 handheld scanner as a gift. Assuming I obtain the correct adapter, would I be able to get decent (that is, better than the stock handheld antenna) reception using the mobile CB antenna for the scanner? I'm assuming that the CB antenna is tuned for transmitting on the CB frequencies, but will this really matter when I am attempting to scan other frequency ranges?

Thanks in advance for your help.

Huh? There is nothing in the technical definition of "repeater" that has anything to do with how many RECEIVERS are able to pick up its transmissions. A repeater relays the signal from its input frequency onto its output frequency. That's all, and that's exactly what cellular repeaters do, along with a lot of other fancy stuff that has nothing to do with the RF repeater function.

"Ryan Faricy KC0DSZ" <jtonsa@worldnet.att.net> made this up:

>A repeater transmits ONE signal to MANY receivers

No, a repeater receives a signal on one frequency and retransmits it, either on the same frequency or another one.
It makes no difference how many receivers pick up that retransmission, and it makes no difference whether the repeater is simplex or duplex.
If a repeater transmits ONE signal and there are NO receivers listening, is it no longer a repeater?

I'm not attacking you, Ryan. I'm just pointing out inaccuracies in your posts that you are trying to pass off as fact.

>Look at the headers!
>From: "Dong Tong Wah" <dongwah@san.rr.com>
>From: "Bill Cheek" <bcheek@san.rr.com>
>Notice - both are san.rr.com

Okay. Let's apply that logic. My address is k4cc@aol.com. There are about six million other people who have an e-mail address @aol.com. So, using your logic, I am the author of all e-mail messages originating from AOL. That was pretty weak, little buddy.

>and as D.P. Roberts pointed out, "Bill Cheek" and "Dong Tong Wah" come out to
>be "Tennelec scanners were really kewl" when the letters are rearranged.

If I rearrange the letters in "Ryan Faricy" and "James Tonsager" it comes out to be "any fairy songster jam cage". Which proves that YOU are actually Dong Tong Wah!!

You are basing the term "repeater" upon a limited scope of
definition related (apparently) to your amateur experience.
There are "many" other kinds of repeaters in the radio
communications field , esp the commercial venue, of which
cellfone towers are part. Some other examples of "repeaters"
are found in trunking radio systems (always called repeaters by
the industry) which are functionally very similar to cell and there
"Mobitex" and "ardis" repeaters located all over most large
metro areas and these are also called repeaters by the radio
community. Repeaters , don't even have to be RF, there are many
brands of "optical" laser communications repeaters that replaced
microwave in numerous national locations. (point to point). Many of
the microwave "point to point" links are known as "repeaters".
So you see, the term "repeaters" within the limited "amateur"
definition really does not encompass the full range of repeaters
that exist in communications in general. In the full realm of
communications, esp. commercial, (which cellular exists within)
repeater would be perfectly appropriate nomenclature for a tower
structure and its related electronics within a cellular
communications system. It even gets more complicated than this
because , there are a lot of areas where cellular towers
communicate among themselves on microwave links. (the input
freq. for cell towers is industry standard 45 mhz below the out
put freq., sound familiar?) Cell towers broad cast (at least) 2 kinds
of signals at all times, they broadcast the voice frequency , duplex
back and forth to one user......AND they broadcast a control channel
signal from "one or more" users to as many as 16 (16 to 25 depd)
additional users within the same cell site. This has an uncanny
similarity (digital wise) to the "amateur" digipeater which I think
"we" all still call repeaters..... and so it goes......

Thanks All

"Ryan Faricy KC0DSZ" <jtonsa@worldnet.att.net> attempts to clarify:

>No, as I said hams have the OBLIGATION, you know, they have to?

Ryan,
While it's true that one of the "purposes" of the Amateur Radio Service, as defined by the FCC, is "to provide emergency and public service communications", there is nothing that requires hams to do anything other than to adhere to the Part 97 regulations. SOME hams are motivated to assist in emergencies, some aren't. Some provide communications for bicycle races, some don't. Same difference.

chuckiex@ibm.net (Charles McCallister) writes:

>positioning of the #20-014 and
>wanted to understand how best to place it for maximum reception

Charles,
I'm not familiar with that particular catalog number, but the same principles will apply regardless. At VHF/UHF frequencies (above 30 MHz) virtually all signals are vertically polarized, so the driven element or elements should be vertical, or, upright. Unless this antenna is, by design, directional (beam, log periodic, quad, etc.) the positioning of vertical elements in relation to one another will not create any significant directivity in this case (I'm ASSuming that we're talking about a scanner antenna). At worst, you might have a null on weak signals if the antenna is mounted on a metal mast or tower, but that effect, too, is usually negligible.
Was that what you were asking???

"Ryan Faricy KC0DSZ" <jtonsa@worldnet.att.net> queries:

>> what would you recommend best? RG-8 or 213?

Ryan,
Either ... or, as I hollered in the earlier post ANYTHING but RG-58, even on a short run.
I have 50 feet of RG-8 between my 2 meter rig and a beam on the roof and am able to hit a packet node 50 miles away with 45 watts. If budget is a factor, RG-8 is a very workable compromise. If money is no object, go with 213.
Of course, if your setup is doing what you want it to do, stay with it!

All depends on your budget. To get started I would suggest my Picking
A Scanner/Receiver page : http://www.qsl.net/n2mca/PICKRECV.HTM
You might also try my Getting Started page :
http://www.qsl.net/n2mca/STARTING.HTM

> and will I be able to pick up telephone conversations

You might hear them accidentally(scanners that can directly tune
cellular telephone were banned by federal law in April '94) but to
listen is illegal to either cellular or cordless transmissions.

> as well as police reports and such with it?

Here's what you might hear : http://www.qsl.net/n2mca/SERVICES.HTM

> What type of scanner do I need?

Answered above. All depends on how much money you're willing
to spend. Typically, the more you spend, the wider the frequency
coverage of the receiver and the more features you'll get. You
can go from a little over $100 up to $2000 for the most popular
receivers. To save some money, you can try buying used.

Do some research and good luck with your decision!

>am attempting to scan other frequency ranges?
>
>Thanks in advance for your help.

Assuming the antenna is "tuned" to transmit on that band is not a good way
of finding out if the scanner actually performs well on that band....
To put things into perspective, a "good" antenna is matched to the wavelengh
of the frequency, the CB lookalike antenna's are built for cosmetics and not
for performance. You will however find that the higher freqencies will
perform much better then the lower ones that is because the higher you go in
freqency the smaller the wavelength and the smaller the antenna is....
If you want all around good reception use the antenna that was supplied with
it. they are designed to perform reletivily well in a wide freqency
range....

Later,
Jeff

Just betwixt thee, me, and the doorpost, I think
it's Mackey. Here's why: Use your Telnet client
and log onto: news.ctc.edu at Port 119 and you'll
get the following response:

200 news.ctc.edu Netscape-News/2.01 25500 NNRP ready (posting ok).

Seems this site accepts IHAVE injections, meaning most
anyone can employ it if they know a trifle of what they're
doing. No, that doesn't prove it's Mackey, but the next
little tidbit sure lights up his nose!

Seems someone (Mackey?) also sent an e-mail bomb to
me, "Wirehead" and PJSmalley with 3-MB of attachments.
They used MY e-mail address as the supposed sender,
but take a look at the header:

```

Well, regardless of the REPLY-TO and FROM lines,
which are easily forged, the sending server was
TELEPORT.COM, the host for PARG.ORG. Guess WHO
plays from PARG.ORG? Heh heh heh heh heh......
Other characteristics of the above kind of match
Smacksie's legit headers, too.

Three guesses and the first two wrong ones don't
count. Now a simple TRACERT shows one server
to be none other than: xyw-r2-adm.clark.edu,
the same source as ctc.edu where the Usenet forgeries
were posted. Well, Clark is located right up there
in good ol' Smacksie country.

Lastly, didja notice how this crap started AFTER
I twitted Smacksie out? It happens every time....

Ummmm....errrr.....heh heh, the bloodhounds are
getting close. They've got the scent, and it's got
Smacksie all over it.

The REAL funny thing about it...is.... I have a full time,
24/7/365 connection to the Internet at 10-Mbps, the
equivalent of about 6 or 7 T-1 lines. So guess how long
it took to receive that paltry 3-MB and to send it back
to the sysadmins of the source?

Heh heh heh.... The forger could send me a gigabyte
of streaming video and it wouldn't be even a ripple on
my pond. But it sure would tie up his modem for a while.

I can tell you. :-)

Find the injection point of a Usenet post or an
e-mail, and then use a WHOIS client to check
the Internic database. Comes back with most
everything but the home phone number of the sysadmins
of that site.

You can do a WHOIS by a variety of means, but the
easiest is to just download a WHOIS client somewhere.

Works slicker than oiled snakesnot on greased ice. :-)

Later you say they were coming from "Clark", not
"teleport". Come on, keep your story straight Bill!

> were posted. Well, Clark is located right up there
> in good ol' Smacksie country.
>
> Lastly, didja notice how this crap started AFTER
> I twitted Smacksie out? It happens every time....

Gee, Bill, I asked you for a truce & you refused. Then I
asked you for a "STAY" on all flames & attacks & you refused.
Now you are still on here flaming & carrying on, saying you
"twitted" ME out? Why is it that after the problems die,
you are causing new ones?

Plus, you are trying to blame this recent crop of problems
on ME, with your only evidence being that "Clark" is located
near me!!! (HEHEHEHEHE) Bill, it is NOT near me, hell,
it's in a different city & different state!!!!

I guess, according to your logic of close proximity is solid
evidence, then you are guilty of the "Mr Wah" posts since it
was the same serve as YOU. This would go for the "Billy Thunder"
posts too!

PROOF POSITIVE!!!

Now, let's get on topic!

Has anyone ever experimentated with using/modifying a
Pro-2009 to receive ACSSB 220 Mhz signals? If you have,
tell us about it!

Ken Dewalt wrote:

> 1. Is 50' of RG-58 coax too long (too much line loss) ?

That's borderline!

If the coax has been exposed to sunlight for more that 3 or 4 years
then you very likely are getting to much like loss.

> 2. Is there a better quality coax scanner users should use ?

Yes! Try using RG-213, it is more low loss than RG-58 & is
NOT affected by sunlight, so it maintains it's specifications.
(RG-214 is essentially the same, but more spendy because it is
double shielded) RG-58, RG-8, 9913, 8214, etc all have the
problem with sunlight. The other option is to put the NEW
coax that is affected by sunlight in conduit, which is a lot of
trouble.

Be very weary to NOT do as some people with minimal knowledge might
suggest: don't use Satellite or Cable TV coax such as RG-59 or RG-6.
They will impose an impedence mis-match (75 Ohms VS 50 Ohms) &
you will lose signal because of that mismatch.

Remember, you get what you pay for!

Good luck, if I can be of any further assistance please feel free to
ask!

3367. FS: Pro-64 handheld scanner with extended coverage

Recieves on:
29- 54mhz FM
66- 88mhz FM (after keypad trick)
108-137mhz AM
137-174mhz FM
406-512mhz FM
806-956mhz FM (unblocked)

Has 100 memories in 10 banks. Runs off of 4 AA batteries.
Included are the AC adaptor / charger, and instruction manual.
The restoration trick involves soldering SMT components,
I've allready done that for you. Plus, you can undo the hardware
mod and then do the keypad mod. "Oops, sorry about resetting it
like that officer, but as you can see, this can't do cell..." :)

It works just fine and has no problems.

Asking $140, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I need the money more than I need the
hobby.

The problem with this picture is Mackey is being too cool compared to other times he has been accused of things.

I really do appreciate the reduction of the flaming on here and I would like to think John has some sense not to be doing such a thing.
The only way we will know for sure is after Clark finishes their investigation , the person forgot that Clark will be able to track things back through teleports system as all messages going through have an ID number with their source .
A spammer found that out the hard way and it cost him $1,500.00 for the isp to clean up his mess and he lost his access to the net.
He thought the had gotten away with it but the message ID nailed his butt.

I am lucky so far have not had the pleasure of a mail bomb like you or any of the others.

Recieves on:
29- 54mhz FM
108-137mhz AM
137-174mhz FM
406-512mhz FM

Has 50 memories in three banks. "Private" bank holds 20
user selectable freqs, "Police" bank holds 20 user selectable
freqs and has a bunch of pre-set freqs that can be locked out,
"Fire/Emg" bank holds 10 user selectable freqs and has has a
bunch of pre-set freqs that can be locked out, "WX" bank does
all weather freqs, and "Air" scans the entire aero band.
Unit uses a mounting bracket, which was lost by the
previous owner. Not included. No manual, but I can instruct on
how to program it. Runs off of 12v DC, power supply not included.
Basically, just the unit itself. But it'd be a great
little thing to keep out in the car or truck.

It works just fine and has no problems.

Asking $70, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I picked it up to put it in my car, but
never got around to doing it. I need the money more than I need
the hobby.

The "Clark" system I have seen you all talking about is in a different
city & different state than me! So, I very much encourage the
"investigation" you speak of!

> I am lucky so far have not had the pleasure of a mail bomb like you or
> any of the others.

I use USA.NET for my mail service. Works great no matter what ISP
I am on! I have NOT had any involvement with mail bombs like
you speak of so perhaps peopel should consider it.

Now, to be on topic, does anybody have any info on modifying a Pro-2009
to receive SSB slow scan TV signals on 20 meters?

3373. Re: cellular, all it's cracked up to be??

Newsgroup: rec.radio.scanner
Date: 1998-06-24 00:00:00 UTC
From: TIgEas LAiR <kaliber@pacbell.net>
Message-ID: <3590ACF5.16908300@pacbell.net>
Source record: 155629

Hi Steve,
"way Back" before cellular monitoring was illegal, numerous
ways to track cell calls were available. The easiest and most expen
sive were software packages (like trunktracker) that worked for cell
fones. Some of these were $6000.00 or more. The "poor mans"
cell track hack was to get any older motorola cell fone, (brick,
bag fone) and solder one simple wire on them to make them go into
test mode. A person would tune in an interesting conversation on
a scanner (hand held for mobile use) , check a list that shows freq/
vs channels and then entered #11XXX into the motorola fone to
hear the same conversation. Then you entered #40 into the fone
to see the control channel codes..... when the fone was told to
change channels, a hex code is displayed on the phones display.
You simply entered the hex code into a scientific calculator and
obtained the dec. numerical value of the new channel. Then enter
the new channel as before. With a little practice, one could track
conversations with-out missing a word. A lil later, some programs
came along that made things easier, like "FOVC" and "Cellular
Manager v2.0, etc. (these required a portable computer for mobile
use) , they got rid of the need for the freq/channel list and
calculator. Of course. "now days" cellular monitoring is illegal and
the methods and programs are no longer used.....Using a "good"
outside ant. 9913 coax and inline preamp, gave one the ability
to track calls for quite long distances. I hope this "historical"
perspective has been of some help.

First and foremost, get rid of the RG58 coax and try a good quality RG6. It will make all the difference in the world. RG58 is good only for use for mobile antennas in a car.

Good luck

John...Get a life...Telling someone not to follow the advise of others that
suggest RG6 satellite cable is a crock off crap. I have been using RG6 for
many years with NO problems. The increase in signal strength more than
compensates for the impedence mismatch.

Try it sometime ... You might learn something

3382. Acars test and demonstration message generator

Newsgroup: rec.radio.scanner
Date: 1998-06-24 00:00:00 UTC
From: ggrey@nojunk.ihug.co.nz
Message-ID: <3590cb03.14670839@newsource.ihug.co.nz>
Source record: 155638

Hi,

I have put together an Acars test and demonstration message generator.

The generator simulates a transmitted Acars message for testing out a computer, sound card and decoder software.

The generator demonstrates abbreviated message expansion and moving aircraft positioning from decoder data base and display systems.

This has removed some uncertainty that I had with my radio receiver and poor reception of the Acars signals.

With my 486DX50 the generator gives excellent performance with a text decoder and acceptable performance with a graphics decoder system.

The data:
- Outputs Acars message format
- Aircraft id
- Flight number
- Departure message
- Simple message
- Moving position coordinates

The hardware:
- Single chip 20 pin microcontroller chip
-10 resistors
- 3 terminal regulator
- crystal
- 7 capacitors
- LED
- PCB 41 x 38 mm
- 3.5 mm phone connector

The output:
- 70mV pp
- 2400 baud MSK
- phase contiuous
- 64 step sine synthesis.

Runs off a small 9 volt battery and plugs into a sound card mic input.

Regards
Gordon Grey
(to reply remove nojunk. from my address)

Ken,
IMHO *any* amount of RG-58 is too long. It is just too lossy, especially the higher you go in frequency.
I have several of those RS antennas hanging here and there in the attic, and all perform quite well using RG-8.
I would hazard a guess that if you replace that RG-58, you'll eliminate the problem.
Good luck and best regards,

Phil:

The reason you can only hear one side of the conversation "in some areas" is because you are only listening to the actual phone handset. You are able to pick it up because it is close to you, and the range of those things is about 2 miles.

If you want to hear both sides of a conversation, tune in to a cellular tower. This setup is exactly like cordless phones - the handset carries only your side of the conversation, and the base handles both sides. The handset receives the other side on one frequency, and transmits your side in the 47-49 MHz, but the base re-transmits it on the lower frequency, 43-47MHz, so you can "hear yourself".

However, cellular systems don't always have a "set" of frequencies assigned specifically for handsets and towers, so you can't tell just by frequency whether or not you're listening to a tower or a handset.

Hope this helps.

I said:
>However, cellular systems don't always have a "set" of frequencies assigned
>specifically for handsets and towers, so you can't tell just by frequency
>whether or not you're listening to a tower or a handset.

I should make myself more clear: Most systems have the handset operate 45
MHz lower than the towers operating frequency. It just depends on what the
tower's "instructions" to the handset are.

I believe how this works (just guessing) is that there is a national (maybe
international) frequency, usually one or two or more frequencies actually,
and the tower sends instructions in a similar way a pager does -- to a
specific phone in this case, instead of a pager. The tower sends the
frequencies that the handset should operate on in a sound in the form of a
quick half-second buzz.
Again, I am just guessing - this sounds right, but if anyone can correct me,
please do.

I don't mean to criticize, but a cellular tower isn't a repeater.

I operate on 2 meters every day. A repeater is used to extend the range of a radio (in my case, I have an HT). A cellular tower is just a random transceiver setup to "talk" with one or more cellular phones. The input frequency for amateur radio is USUALLY 600KHz higher or lower than the output frequency.

In other words, there is no *other* cellular phone going through the tower on an input frequency, and having that transmission transmitted on an output frequency for all others to hear.

A repeater broadcasts to everyone set to the same output frequency. Cell towers only transmit to one phone.

WHAT?! Satellite cable (6) almost works better than 213. There is little
line loss at all. I've never had any problems with it.

BTW: not all Cable TV coax RG-59.

I am looking, with very little luck, for a leather case to fit a Radio Shack Pro-90 or BC235XLT (basically same radio). Radio Shack has discontinued this item and I have been unable to locate one sitting in a stock room throughout 4 states so far. I have tried Uniden but they link me to another vendor for accessories and they do not carry this item. I have tried various combinations of wording through search engines and tried a large number of sites that came up with no result.

If anyone has any ideas or better yet knows where I can dig one up I would appreciate the help.

Ron

>transmissions. Thanks to this newsgroup, I have learned a great deal concerning

If you can't receive them directly, you may be able to pick up the image
frequencies. However, it is illegal to eavesdrop on either one, I would
think. Or maybe it's just on the fundamental frequencies. I've not heard of
anyone getting in trouble for listening to images.

>cell capabilities) is: Does the fact that a scanner can receive cell
>transmissions justify the cost of these used scanners? What are the
>interceptions like (broken conversations? One sided?)? Do you have to be near a

Depends. If you want to flaunt the law and listen, then it's worth the cost.
I don't listen, but I have a fully-functional scanner because the government
has no business making a restriction like that.

Back before it was illegal, if you listened between 870-890 MHz, you could
hear both sides of the conversation, generally speaking. 45 MHz lower you'll
find the mobile unit, but can hear only that side of the conversation.
Occasionally from 870-890 you'll hear only one side of the conversation
except for a brief moment just as the call switches cells. I don't know the
reason for that.

It is nearly impossible to manually follow a call, but it could be done, back
when it wasn't illegal to monitor, of course.

3415. Base antenna sensitivity

Newsgroup: rec.radio.scanner
Date: 1998-06-24 00:00:00 UTC
From: Ken Dewalt <satvsys@worldnet.att.net>
Message-ID: <6mpiir$nlh@bgtnsc03.worldnet.att.net>
Source record: 155695

I have a question concerning my base station antenna and coax.
I purchased the Radio Shack multi-band antenna for my base
station. My receipt shows this antenna as a VHI/U base antenna
with a cost of $19.99. A description would be 4 approx 15" radials
coming out about the mid point and another vertical rod about 15" also.
It is mouted approx 25' beside my chimney.
At same time I got 50' of RG-58 coax with PL-259 connectors already
factory
attached. Hooked it up and was pleased until just the other night.
I had the PRO-90 scanning the same frequencies and noticed it was
pulling in many more channels than the base scanner (PRO-2004).
At first I thought new scanner vs. old scanner sensitivity, but I hooked
a 4' piece of wire to rear connector of base scanner and it picked up
just as good as PRO-90. I monitored one particlar channel in the
155 MHz area and the PRO-2004 was not picking up any signal attached
to outside antenna, yet did OK with just a 4' piece of wire attached to it.
The coax was about 10' to long into the room so I have coiled it up if that
makes any difference.
Questions I have are as follows

1. Is 50' of RG-58 coax too long (too much line loss) ?

2. Is there a better quality coax scanner users should use ?

3. Opoinions on quality of this $19.99 RS antenna (and any suggestions on
another)

Many thanks for any who respond to this. I do enjoy the newsgroup and have
learned
quite a lot from prior post.

Well, there is a LOT of line loss at VHF-Hi and UHF, yes.

> 2. Is there a better quality coax scanner users should use ?

Radio Shack's RG-6 Satellite cable is the best cheap choice.
Use gold plated F connectors and a F-to-BNC adapter at the
scanner end and whatever else is needed at the antenna end.

> 3. Opoinions on quality of this $19.99 RS antenna (and any suggestions on
> another)

Any base antenna mounted in the clear and as high as possible
is about as good as any other, at least for now.

Without an S-Meter, you can't tell what signals are
improved or degraded because the nature of FM makes
all signals sound good, even when they're weak. So
you need an S-Meter to properly judge antennas and
coax cable losses.

In Canada there are no restrictions and I have a scanner with complete coverage. Like others here, I would say they occasionally are interesting but they really aren't that great. I rarely listen to them. Following a conversation is near impossible as they do jump frequencies often. Usually just as it starts to get interesting, the frequency changes, it is frustrating. They are harder than trunked systems to track I would say. Some conversations are one sided, others are full duplex. If you are in an urban area you probably have quite a few repeaters around you. Signal strength is usually very good and the transmissions are very clear.

Greetings,

A long, long time ago on this group, someone posted some simple instructions for installing a 455 kHz IF output on the PRO-2035. Basically, all you need to know is what point on the board is a good "tap" point for the IF. Can someone fill me in? Has anyone tried this mod? I would like to be able to feed the IF to my HF receiver, to tune SSB signals from amateur satellites.

Thanks!

Hi Doug--

I live hear in Atlanta, too, and am awaiting the arrival of my Bearcat 235 TrunkTracker. I'm glad to hear that you are having success in this area regarding scanning.

Thanks for the tip on the web site. I tried to connect this evening, but it didn't work. I'll check back again. There is also another Web site with Georgia trunking info. See http://www.trunktracker.com/states/ga.html.

Regarding finding the action, here are some of the things I do. They might be useful.

First, make sure you're scanning the right county/city. If you're driving through Dekalb and a fire truck screams by, switch to the Dekalb trunk system.

If possible, note the engine company on the truck. If it's engine company 12, for example, listen for transmissions involving "Engine 12," or "Ladder 12," or "Rescue 12," or whatever.

Next, make sure you're scanning the "primary" frequency. For example, make sure you're listening to the Dekalb F1 (primary fire) trunk channel. When fire or police are responding, they are usually dispatched on the primary frequency and stay there at least until they arrive on scene. I'd be sure to listen only to the primary frequency, so you don't miss any traffic due to interruptions from the dog catcher, jail, or whatever else is on the trunk system.

Listen closely. Sometimes the radio traffic passes by very quickly, so you have to be ready for it.

Hope this helps a little. Happy scanning!

AR8000

> - Ease of use/programming

R10 - but still very quirky

> - Interfacing with PC

TIE

> - Durability

R10 - by far

> - Ability to scan trunked systems

Neither...you'd have to do some mods to them to interface
with a PC and a not-so-cheap piece of software to tie it
all together.

> - General satisfaction with either.

Personal taste.

> The AOR covers 0.5-1900 Mhz, while the Icom only covers 0.5-1300 Mhz.
> Is this a selling point? Is there much activity above 1300 Mhz?

For most people it's not a point. Just a bragging right for the
manufacturers.

> Or - am I missing some other portable unit with equal or more
> capabilities/performance?

R10 is much smaller than the AR8000. AR8000 has many more
features but is also much more complex.

You might want to wait for the upcoming AOR AR8200!

Jimmi-

Just wondering, why do you rule out the Radio Shack model? I have been using it for a couple of years, and it works very well in the VHF high band and above (above 50 MHz or so). I have heard very good things from other people who have one too.

The only drawback I can think of is that it comes with the Motorola-type plug. I replaced that plug with a BNC connector. Just make sure the connector is attached well, because they tend to get a lot of abuse in mobile installations.

Below 50 MHz, by the way, I use the mag mount CB antenna that came with my emergency CB radio. It receives much better in the 25-40 MHz range than the Radio Shack scanner antenna (or probably just about any other mag mount scanner antenna).

Anyway, just my 2 cents worth.

A cb antenna is a cb antenna is a cb antenna. Don't waste your time with it, unless you want to pick up signals around 27ish mhz. I have the trunk lip mount version of the cellular look-a-like and it sucks big time on every frequency including CB. The good news is that you can loosen the set screw at the base of the whip and remove it from the base. Save the base for tinkering later. Get a BNC connector at the next hamfest or order one from almost anywhere and solder the pigtail whip into the BNC! Mine works very well as a handheld antenna. Not much to of anything below 800 but really kick ass above 800. I think the whip is very similar to a real cell phone antenna which is the best antenna I've used for 800. Real cell phone antennas work much better than the MAX800 which I own and think is a waste of money! My favorite 800 antenna is a $19 cell phone antenna with a TNC to BNC adaptor. Keep in mind that most commercially available antennas used for transmitting will look like a dead short to the scanner at some freqs. This is because of the wiring in the antenna base. In my opinion, the best wide band mobile scanner antenna is made by Antenna Specialist. I think it is called the Spectra. It seemed very wide banded the one time I tried one. The last place that I saw one was at EEB some time ago.

Best of luck,
JungleJim the Antenna Fanatic

Barun,

The Radio Shack multi-band mag mount antenna (about $20 I believe) is good.
I have used mine for a couple of years with good results. This is the one
with two black loading coils on it.

This professional Spectrum Display Monitor is designed for use as a panoramic signal display for VHF scanners and Communication Receivers such as Icom, AOR Realistic etc. The SDM-42A displays all signals present in the receiver's IF on a 5" CRT so that the operator can monitor signal activity up to a full 10mhz wide. The operator can then quickly tune to signals as they appear in the spectrum display. This greatly facilitates locating and tuning of intermittent signals as well as surveilling a particular frequency band. This unit has been used in a

hobbiest environment not a professional one and is in excellent condition. Asking $850.00 plus shipping.

If you've read some of my other posts, you'll find that I
accidentally mistyped the subject of the text. I publically appologized
for my little boo-boo, and re-posted as "FS: pro-46.."
From the times on the origional postings, it was in the middle of
the night, and even though I double and triple checked the body, I
neglected to check the subject of my posting. Besides, I also own a '64
(which isn't for sale, and can not be modified) so this also contributed
to the slight confusion on my part.
I attribute my mistake mostly to my lack of caffeine at the time
of posting. :)

But it is a pro-46 for sale, and not a pro-64.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

3454. Re: EMWIN experience so far....

Newsgroup: rec.radio.scanner
Date: 1998-06-25 00:00:00 UTC
From: Jason Downey <downeyjl@clark.net>
Message-ID: <35926340.796C@clark.net>
Source record: 155335

** Message is rather long...but my own opinions on the EMWIN experience so far. This is the only fitting place I could put this message. I'm welcoming feedback so let me know...

Here's my experience with EMWIN, SO FAR. First, I have a nice scanner, a pro-90 from RadioShack. I can pickup the EMWIN signal STRONG from Fairfax to Laurel @ 142.925, using the rooftop antenna in our condo area (had the walljack, got the converter, tapped into it). I tried looking for resources software wise, which will actually demodulate the software. I have a second-hand DOS machine dedicated for this purpose. So, trying to find a TSR that will do these functions-- well, let me say...not alot of resources. Luckily XenoCode is nearby in Maryland so I can just drive from VA to there to pickup the demodulator equipment. At least I have that going for me as an option.

Also, here's another thought. When dealing with TSR-based demodulators, it takes hold of the IRQ for the serial port, namely IRQ 4 or 3. Now, in turn, if you wanted to capture the data from a comm program - like telix for DOS- wouldn't that cause problems with the COMM program? Telix or anyother DOS based app likes to take hold of the IRQ 4 or 3 too, for it's main interrupt routine. So if you try to demodulate data in TSR, and try to capture it using IRQ 4 or 3 through Telix - you CAN'T because it seems that the two apps can conflict. Correct me if I am wrong, but that's why I understand I cannot get this data demodulated. If the softwares actually use other interrupts - it may be possible, still; most apps from what I understand use interrupt 4 or 3 anyway to access the serial port. :(

I tried BTL (Blaster Teletype), but it doesn't work - because it only decodes to a certain baud, resulting in gibberish on the screen. I ran tests with this app. It follows the signal stream, but it doesn't know what to do with it because of the low bauds it works with. It tries to decode data (even picks up the signal), but this datastream in our area is 2400 FSK. Sorry to say, BTL does lower baud rates and can't decode it. Not an app problem, it's only meant for RTTY. Bummer. Maybe the author should consider this as an update feature?? BTL is a promising option for EMWIN decoding. Based on the other options I tried.... (BITTY SBTSR..etc)

So, I'm left with one alternative: to get the stupid demodulator hardware piece so I can get the data. It's not expensive, so it's not a big deal. I heard there was a soundmodem driver for linux...to demodulate data, but I just don't have the time to set it up. It's better that I just get a solution that's known to work. Believe me, I've researched this in & out it seems. Just my thoughts. Apologize if

I'm rambling here...

Shouldn't there be a working alternative instead of someone buying the hardware...especially if you have a soundcard??!! Soundcard seems to be the more modern way to decode this stuff. I've seen the entry level prices for satellite based methods of getting EMWIN: all I could say is ..... Look at weathernode.com pricing and see what I mean. The radio method is of course better. I'm not that serious with this stuff. Only a hobby...only a hobby..... :-) I'll let you all know how the demodulator worked for me when I get it. Today hopefully... I'm sure it'll be fine...I've just been frustrated trying to find the right software-based resources. People say it's possible....but from what I saw I had trouble with it.

Hi guys, I have some more info on the subject. These cell phone look-alikes have NO GAIN on them at all especially for the lower freqs. Like the guy before me said, the higher the freq (800 MHz) the smaller the antenna. Manufactors have found ways to shorten the antenna using coils and so forth. One thing if your gonna be using a rubber duck antenna inside the car your gonna get nowhere. The car will reflect and block out so much of the RF signal. If your looking for a cheap and inexpensive way maybe using radio shacks clip on the side of your door to get the small rubber duck outside the car. Some antenna companies sell a magent mount with just a BNC and you could put a bnc antenna out there such as the Larsen BNC MM BNC mount. Personally I would use the Radio Shack Magent mount scanner antenna, I have it and it works great all throughout the bands. Good Luck with your choice,

You do have to buy a new scanner. And I just brought the BC-895XLT Base Trunk-Tracker. Oh and it's a GREAT Scanner!!!!! Great receiver and its got everything. Unfortunatly my P.D. is not in 800 MHz so I can' t tell you about the trunking but its a FANTASTIC regular scanner. Metal Casing, CTCSS Built-In, WX Alert. and it covers more then least expensive scanners frequency wise. Good Luck with what works for you. One thing is the Trunking crap sounds difficult. I'm glad my P.D. is on VHF-High which more then fits their needs. Their not looking to change at all.
See ya

Both. Lots of support for the 8000 but it's been around quite a while.

> - Durability
R10.

> - Ability to scan trunked systems
...neither are going to be real good for that -- they just don't scan
fast enough for you to hop from channel to channel, and neither understands
the trunking data channel.

> - General satisfaction with either.
AR8000 for me -- see below.

> The AOR covers 0.5-1900 Mhz, while the Icom only covers 0.5-1300 Mhz.
> Is this a selling point? Is there much activity above 1300 Mhz?
Sat downlinks, radio astronomy, GPS, mobile comm, some telemetry.
Potentially interesting stuff, but a handheld wouldn't be the choice
for decoding it, I would think.

I don't think of it as much of an issue.

> The Icom machine is almost 2/3 the cost of the AOR, so THAT is a
> selling point, but obviously, but price is only one feature.

> Or - am I missing some other portable unit with equal or more
> capabilities/performance?

For me, the AR8000 won because of a couple things. Its HF support
was much better, particularly in terms of how stable the receiver
is and how accurate it is. I found the R10 to be completely useless
for SSB or ECSS reception. Both the one I bought (and returned)
and the store demo wandered around +/- 1kHz when in SSB mode. They

were also both off by about 2kHz when comparing their frequency displays to WWV. The 8000 is quite stable and within 50Hz of its displayed freq. At least mine is.

The other thing is, despite the clunky user interface, I like having the feature set the AR8000 has. Pure and simple.

I just wish it wasn't as big as it is and was more robustly constructed...

My opinion, and worth every penny you paid for it. Doubtless others will have strong, different opinions.

(You might consider holding off a bit and having a look at the AOR-8200.)

I'll tell you what I know. First visit Uniden's website they might have some more info. The Uniden BC-148XLT is a 20 channel (no 800 MHz) scanner (no search modes) that does have WX Alert. Uniden's new trunk-tracker base DOES have the WX Alert. I just got it. Its really cool. I don't need to use the trunking yet but it works great as a regular scanner, with CTCSS built-in. And I would personally NOT BUY ANYTHING from "Rat Shack". Only antenna mounts. Everything else is ALL JUNK!!! I brought the Pro-2041 and its broken. Something is wrong with the reciever. Also the audio sounded TERRIBLE. It was a plastic case too, the BC-895 is Metal!!!
Good Luck with your purchase,
-Steve

Hey guys there is one thing. IN AN EMERGENCY ANYTHING GOES!!!!!!!! That is in FCC Rules maybe not under cordless telephones. But its there. Its that simple. In an Emergency anything goes. You could be charged with not doing anything by the good-samaratin law in your state. You knowing something without doing anything is also against the law. And you can be sued. Something better that I would consider doing since I'm an ambulance corp member is go next door, and see what you can do and call the P.D. and EMS from there. But if your not trained call 911 FAST!

Best Regards,
-Steve

>His question never said anything with transmitting on a public-service
>freq. THAT IS HEAVILY AGAINST THE LAW!!! Even in an emergency.

Steve,
Not so, OM. To wit: (*emphasis added*)

97.403 Safety of life and protection of property.
No provision of these rules prevents the use by an amateur station of *any means of radiocommunication at its disposal* to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property *when normal communication systems are not available.*

97.405 Station in distress.
(a) No provision of these rules prevents the use by an amateur station in distress of *any means at its disposal* to attract attention, make known its condition and location, and obtain assistance.
(b) No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a), of *any means of radiocommunications at its disposal* to assist a station in distress.

97.401 Operation during a disaster.
(a) When normal communication systems are overloaded, damaged or disrupted because a disaster has occurred, or is likely to occur, in an area where the amateur service is regulated by the FCC, *an amateur station may make transmission necessary to meet essential communication needs and facilitate relief actions.*

It's not something you would do lightly, but it is definitely legal under emergency conditions.

Interesting, John. I constantly list my callsign and you say nothing. You even LIST YOUR OWN, so your "philosophy" even applies towards yourself.

Have you ever thought that one should be proud being an amateur operator?

One would also get results on the harmonics of the CB band (~28 MHz), but
not as good of results on other frequencies.

Harmonics = Base Frequency x (any real integer - 1, 2, 3, etc)

So, a harmonic of 28 MHz would be 56, another is 112, 168, etc...
Odd-numbered harmonics have better results than evens.

Well, the resonant frequency (the frequency at which an antenna is optimized for) would be rather low (28 MHz), but it would work better than any antenna in the car. You'd probably get the best reception in the 29 range, and any harmonics of 28 MHz.

To add something, cellular antennas, even cellular look-alikes, have an inductance coil (also called a pigtail) which gives a slight gain (a few dB's)...

The scanner would receive better than if you used an antenna inside the vehicle, but it isn't a multiband antenna, so you would get THE best results from around 29-34 MHz. If the scanner picks up stuff below 29 MHz, you would also get good results from 23.999-28.999 MHz.

Source record: 155394

PL = Private Line

As a scanner user, you have no use for them, unless your scanner supports PL (also known as CTCSS - continuous tone coded squelch system). It is used to prevent interference from other radios. It is subaudible, and you really can only hear it when the tone is set to a high frequency; around 200 Hz. Otherwise, you have to strain to hear it.

It is used a lot in amateur radio (repeaters) and public-safety agencies.

It works very simply: If a transmitter doesn't transmit the correct PL tone to a receiver equipped to open the squelch at a specific tone, the receiver receives "nothing". If the correct tone was there, the receiver's squelch would open, allowing the receiver's user to hear the transmitting station.

Hope this helps.

3487. FOR SALE: Uniden Bearcat BCT-7 Highway Patrol Scanner

Newsgroup: rec.radio.scanner
Date: 1998-06-25 00:00:00 UTC
From: lordviper@bigfoot.com
Message-ID: <3592ab3f.8588124@news2.new-york.net>
Source record: 155397

This is a fully loaded scanner that covers all (legal) frequencies including 800 mhz and Aircracft. Still in the original packaging and with all the accessories.

Here is a summary:

Highway Patrol Alert
Highway Patrol Scan
Local/County Police Scan
DOT, News & Fire Scan
CB Monitor & Weather Scan
12 Bands with 800 MHz
100 User-Prog. Channels
One-Touch Band Search
AC/DC Operation
Mobile Mounting Kit

Features:

Highway Patrol Alert - Alerts you when you are within 3 miles of a highway patrol unit using a mobile extender.

12 Band Coverage - Including 800 MHz, all public service bands, "Ham" Bands, Federal and Military Land Mobile Bands plus Aircraft and Weather Channel.

100 Channels - Program to your choice of frequencies.

Turbo Scan - This lightning-fast technology enables the BCT-7 to scan and search nearly 100 channels or steps per second. The BCT-7 scans about five times faster than any standard scanner sold in the United States.

LCD Display - Nine digits LCD with back light display for night visibility.

Private Channels - With just the touch of a button you can automatically scan 25 programmed private channels.

Highway Patrol & Police Channels - Automatically scans highway patrol and police channels and your choice of 25 programmed channels.

Fire/News Channels - Automatically scans fire, emergency and news channels and your choice of 15 programmed channels.

State-By-State Scanning - Use the state key to select the two letter abbreviation for the state you are traveling in and the BCT-7 will start scanning the highway patrol frequencies

stored for that state.

WX Channels - Automatically scans all NOAA weather channels and 2 canadian coast guard channels.

Protection - Helps to advise you against all forms of speed measurement including Radar, VASCAR, Airplane, Clocking and Laser.

Lockout Channels - This feature allows you to skip channels you don't want to hear (works for PRIVATE, POLICE, FIRE/EMG, HWY, DOT, FIRE and NEWS channels).

Band Search - The BCT-7 can scan almost 30,000 frequencies and has 12 separate band search capabilities and CB channels (1-40).

Mute - Provides audio mute function when others in vehicle do not want to be disturbed.

Memory Protection - The BCT-7 comes with a memory back-up system that remembers your state selection, frequency selections and deletions

Accessories - Includes DC cord, mounting kit, cigarette lighter plug, mobile antenna, AC adapter, telescopic antenna and a Frequency Starter Guide.

This is an amazing scanner but i don't really need it. It is brand new and has never been used. Make me an offer ($100 at least) and the top one will get it. I will cover shipping!

> WOW! All the way up there at 1.5:1 !!!
> OOOOHHHH! That's so high!! One only truly cares about SWR when they're VERY
> serious about a hobby or when they're transmitting (so as not do damage the

Ryan, you are missing a few things here.

1. While you are correct that a high SWR can damage a transmitter &
NOT a receiver, it will still represent a degree of signal loss
in BOTH.

The example we ahve been following will (in theory) represent
a SWR of 1.5 to 1. Next you need to add the mismatch
of the antenna . Most scanner antennas have (overall) quite
a bit of mismatch, 4 to 1 is not uncommon. This is because
a scanner antenna is (for example) taking a antenna designed to
resonate at 150-156 Mhz & try to use it from 138-174 MHz. At those
band edges you will likely get a very high SWR, which would then
be multiplied by the SWR of the feedline.

2. Next, when you take a single band antenna & try to make it
a multi band antenna, you always end up with a narrower Q (bandwidth)
of the antenna than before (as a single band). For example,
you can take a 10 meter antenna & use it for 2 meters (5th harmonic =
29 Mhz x 5 = 145 Mhz) but the usable bandwidth of that antenna will
be very narrow.

3. Usually, when using an antenna for scanning you must accept these
facts as a part of life because it simply is not practicle to
change an antenna every time the scanner changes frequencies. There
are a FEW radio (expensive) that AUTOMATICALLY change antennas as
scanning frequencies the Icom 706 & the Icom 575 are examples of
this as they have an option of automatically changing antennas
between 10 meters & 6 meters.

Again, the mismatch of the feedline (say 1.5 to 1) BY ITSELF
is a minor issue, UNTIL you multiply that by the mismatch of the
antenna. (and the lack of a ground plane on hand held scanners).
To clearly see this in action, try monitoring a 30-50 Mhz signal
with a normal scanning antenna, then try using a six meter or
10 meter antenna to monitor them. There will be a BIG difference!
Note: Don't try this monitoring a paging frequency, you don't want
the signal to overload the front end, you want to be able to hear
the improvement. Find a weak signal to experiment with.

Ryan Faricy KC0DSZ wrote:

> Ah, but AOL IS an ISP. It is a service, it provides, and it provides
> Internet.

No, not true, sorry!

An ISP is a service provicer that offers internet service following
standard internet protocols (TCP/IP connection via SLIP or PPP,
and usually offers the following of POP3 and SMTP mail service,
and NNTP news service.

AOL is their own SEPERATE online service that offers a gateway to
the internet, but they are NOT the internet themselves!

To test this, try using a standard "trumpet dialer" or the
"dial up networking" to access AOL. You can't do it! AOL, since
they are NOT an ISP, uses their own seperate connection method which
specifically requires you to use THEIR software to access their network.
Once you use the AOL dialer to accesse AOL, you can't use a regular
internet mail program to pull or send your AOL mail, & you can't
use a internet news program to view newgroups thru AOL. Again, this
is because they are their own seperate online service (like Fidonet or
Compuserve) that does not follow Internet protocols.

follow
it even if others don't (HINT, HINT).

Now to get on topic. Has anyone experimentated with using a Bearcat 250
to receive FM stereo?

3492. Help w/ Bearcat 100

Newsgroup: rec.radio.scanner
Date: 1998-06-25 00:00:00 UTC
From: David Craig <dcraig@carroll.edu>
Message-ID: <01bda07b$26232160$4a567fce@dcraig.carroll.edu>
Source record: 155402

Hello,

I found a Bearcat 100 at a garage sale in the "free" bin. Took it home and it works! Does anyone have any infromation about this scanner. I have no boxes, manuals, or anything. I am most interested in finding a AC adeptor, and how to use the search and hold buttons. It also seems to revert to some preivoulsy programmed frequencies when I change the batteries. Is there a way around this? I am also interested in any keyboard tricks, specs, and any other information that you may be able to share.

Thanks in advance!

Dave

John-Mackey-KA0SSF <KA0SSF@parg.org> wonders:

>So what, EXACTLY, do you want?

It's really quite simple. When it was suggested that RG-6 cable could be used with good results with a scanner antenna, you made the following claim, and I quote:

>They will impose an impedence mis-match (75 Ohms VS 50 Ohms) &
>you will lose signal because of that mismatch.

Assuming that you were actually referring to impedance, I then asked you how much signal you would lose because of that mismatch. You still haven't answered that question.
Now, you could be honest and say you don't know the answer, or you can continue to spout a lot of meaningless sludge about standing wave ratios which has absolutely nothing to do with you original postulate that such an arrangement would result in signal loss.
It's obvious that if you consider 1.5:1 to be a high SWR you have absolutely no screaming clue what you're talking about, so I really don't care what your answer to the original question is. I was just trying to be polite and answer yours.
Sincerely,

Dave, K4CC

PL (or private line) is used by different (usually commercial) stations using the same group of frequencies. PL settings are usually set at the factory or a service center. When someone's radio is in PL mode, he can only hear radios transmitting the same PL setting his radio is in, eliminating chatter from other businesses or stations. However, since scanners recieve in carrier squelch, no PL setting is needed to hear the transmission.

This really is just a matter of semantics, but let me try to explain the cellular system a little better. The cell site receive frequency range is 824 - 849 Mhz (which is of course the mobile's transmit frequency). The cell site transmit frequency range is 869 - 894 Mhz (which of course is the mobile's receive frequency). When a mobile is transmitting, the signal is received by the cell site but is not retransmitted on its tranmit frequency. It is instead demodulated and the audio is sent over a phone line back to the switching office so that it can be routed to the person on the other end of the phone call. When this person speaks into their phone, the signal goes through the switching office to the cell site where it is transmitted over the cell site transmit frequency to the mobile phone. The reason that 2 different frequencies are used is so that the conversation can be full-duplex.

The above scenario is for a normal phone (land line) to mobile phone call. A mobile to mobile call can be a bit more complicated and I will not try to describe it. Also i have left out all the control signals that allow the system to work.

The point is, the cell site never acts as a conventional repeater. The signal receieved on the input frequency is not retransmitted on the output frequency. It is also very different from a trunked system. Of course, neither of these systems are full-duplex like the cellular system.

If one were to listen to a cell phone conversation on the cell site's output and hear both sides of the conversation it is because of feedback between speaker and microphone on one of the phones.

> and cheaper last time I checked.

By what standard of judge?

There will be serious holes in your "best test of all" unless you
can correctly answer all the following!

Did these scanners have s-meters? Or did you use calibrated readings
of the limiter outputs?

If you used limiter outputs what assurances did you use that you
would load down the circuit with your metering equipment & affect
readings?

What standard were the s-meters or calibrated readings calibrated to?
(and when was the last time the standard was calibrated?)

What was receiver sensitivity of each scanner? (Please give in uV)

What were the lengths of the two pieces of coax you used?

Were you using the proper connectors or did you
have to use adaptors?

If adapters were used what was the insertion loss of the adaptors?

> If a person has the money and smaller coax is not required Belden 9913 is
> by far the best, but not everyone can afford it.

How do you justify that 9913 could be "by far the best" even
compared to RG-214?

> John, like it or not, you are not the god of scanners.

I never claimed to be. Certainly you are not either!

> We are all here
> trying to help eachother and most help is from experience.

I agree, your experience appears to be limited to using 2 scanners
& then taking that data as the final! Please, base your assistance
on valid data provided from true specifications!

> Just because YOU
> don't like something is no reason to tell people it doesn't work.

I never said it doesn't work, I simply stated what would work better.

> It's too
> bad you can't respect other people's opinions

Likewise, in an effort to flame me you used some pretty shabby examples.
Why couldn't you simply accept my data & look into it rather than
immediately try to prove me wrong?

Artur,
The stock antenna on the R10 is not very good overall. It is
especially poor in the ranges you tested according to my testing
of 27 handheld antennas I did a while ago.
For improved reception, you'll want to get some form of
telescoping whip or at least a long antenna like the Diamond
RH-77CA or Austin Condor. Your reception will improve immensely
if you do.

Strong Signals,

Stop putting words in that I didn't. Obviously I made a typo,
you have to use a simple mistake to support your cause.

Let's get on topic, does anyone know good mods to do
to a Bearcat 250?

3502. Scanning Strategy Thread

Newsgroup: rec.radio.scanner
Date: 1998-06-25 00:00:00 UTC
From: *dbenson@mindspring.com
Message-ID: <6muh2a$i3r$1@camel19.mindspring.com>
Source record: 155412

Looking for Advice,

I live in the Atlanta area and have had my first scanner, a Pro-90 trunk tracker, for about 2 months now. All the surrounding areas are trunked and the Pro-90 has worked great - especially after obtaining the Fleet codes and local police signals and 10-codes from http://www.mindspring.com/~mm505/. (great site for Atlantans)

All that said... While driving around town, I frequently see police cars, fire engines, emergency vehicles heading somewhere with their lights flashing and sirens blaring. I never can seem to find out what's going on.

I would like hear some strategies for:

1. Finding specific "actions" on the scanner. (see above)
2. Finding and Following police, emergency events
3. Best days and times, if there are any
4. Organizing memory banks for efficient use
5. Best ways to use Limit Searching
6. Etc.

In general, how to move to the next level of the scanning hobby.

P.S. I say this hesitantly but... Everyone can see all the flames in this newsgroup. But, what I've noticed the last week or so is that the vast majority of the flames are coming from everyone BUT Bill and John. - I believe most people enjoy the flaming; otherwise, it would stop.

AND...

It doesn't affect the value of this newsgroup anyway. I've never posted a question up here that didn't result in good responses and valuable information. I think this is a Great group! Thanks for all the help.

Blake, hardline is NOT coax (but it is feedline).
He was asking about COAX.

(besides, hardline can run $5 per foot plus $50 per connector
so I doubt that is what he wants.

Blake, please, try to use some honesty in your posting!

Just out of curiosity, exactly how is sunlight going to affect the line loss of the coax anyway? Other then the possible degradation of the pvc jacket, I don't see how it would affect the containment of the signal. Only possible solutions might be water invasion through formed pours or through the connectors, but wouldn't that be based on extended, general, "weather related" exposures? And if so, how would sitting in a display window expose the coax to the weather?

Seriously, not flaming, just curious.

Charles

>Nashville TN

Your ignorance is showing. First POCSAG is a open protocol, the particulars of which are available to anyone who wants them. It is NOT an encryption scheme.

Second, it is not illegal to monitor pages intended for you or for a service you pay for. The majority of POCSAG encoders/decoders have filtering ability so you can choose not to break the law.

Third, POCSAG is an FCC approved protocol for Ham Radio use. In fact, Kantronics markets the KPC-9612 with POCSAG RX/TX capability as well as pagers re-crystalled on amateur frequencies.

Fourth, the provisions prohibiting the reception of certain broadcasts under the Electronic Communications Privacy Act (a "Lady Godiva" law) fly in the face of the original U.S. Communications Act and various international treaties. The intent of the original act was to place the RF spectrum in PUBLIC TRUST. And the public has the RIGHT OF SCRUTINY of all public trusts. This is why the police were PHOHIBITED from encrypting their transmissions (until recently). Check the CFR for the Posse Commitatus Act.

As far as I can see, the only people who benefit from ECPA are OUTLAWS. The cellular phone and the pager are the main tools of drug dealers, pimps, prostitutes, and the like. The largest cocaine ring in the U.S. used cell-phones and pagers to avoid and evade border inspection stations that were manned with drug sniffing dogs or other drug detection methods. They were discovered only by accident. And only after they had distributed millions of ounces of cocaine in the U.S.

The only reason congress passed ECPA was because of heavy lobbying by the communications providers and to lull consumers into a very dangerous and quite false sense of security.

Only with public scrutiny can we (the citizens) of the U.S. prevent and reduce the use of a public resource for criminal activity. In the

past few years a Phoenix area scanner enthusiast managed to foil a multiple-murder scheme because he was monitoring cordless phone conversations. He managed to tape part of a conversation where two individuals were plotting to murder several people, and in fact, had already poisoned one female. Because they mentioned one of their intended victims by name the police were able to contact him, and identify the two miscreants. Both plead GUILTY to attempted murder charges and are serving long prison terms.

I won't stoop to name calling, as you did. It was uncalled for on your part.

73,

Mark Fellhauer
KC7BXS

So here you go , All public safety you where wondering where is it
hiding in NYC ?

Now the question is ... :
It seems it's imposible to listen to these transmisions in the "old way"
where we are told to scan all the freqes except for the data channel.
All i pick up are relatively weak signals, and not very often
transmistions are held at all.
I don't want to make a mistake buying another scanner for the 3.7 trunk
tracker or the bearcat TT. if that's what it's gonna pick up.
What you guys think about it ?
Thanx for replays
Phil

New York City Motorola Type IIi Analog Mayor's Office and

Message-ID: <359251BE.83913859@nospam.com>
Source record: 155450

Hi there,

I have a Radio Shack mobile magnetic mount celluar-lookalike CB antenna
in
my car. I just got a PRO-91 handheld scanner as a gift. Assuming I
obtain the correct adapter, would I be able to get decent (that is,
better than the stock handheld antenna) reception using the mobile CB
antenna for the scanner? I'm assuming that the CB antenna is tuned for
transmitting on the CB frequencies, but will this really matter when I
am attempting to scan other frequency ranges?

Thanks in advance for your help.

John-Mackey-KA0SSF <KA0SSF@parg.org> writes:

>Congratulations to Ryan Faricy for obtaining his AMATEUR RADIO
>license form the FCC on June 19, 1998!! (just a few days ago)

Quick, everyone! Link arms and form a circle around Ryan so Makcey can't get to him! Here, kid! Here's a life preserver! Okay, now swim as far from Mackey as you can, as fast as you can! Atta boy!!

Only John-Mackey-KA0SSF <KA0SSF@parg.org> would take something really significant and belittle it:

>Ryan, I encourage you to keep on going, don't stop at
>code-less tech. Keep going to extra.

1.) There is no Amateur license class known as code-less tech. I would have thought that if you're such an active Volunteer Examiner, you would know that. Ryan earned a Technician Class License, and has every right to be very proud of that.

2.) The guy hasn't even had his license a week. Let him relax and enjoy it for a while before you start cramming all your pompous upgrade rantings down his throat.

3.) If he wants to upgrade, he will. If he doesn't, he won't. Either way, he'll still be twice the man you are since he has demonstrated that he's not afraid to admit when he's made a mistake. Of course, you wouldn't know about that, since you don't make mistakes, right?

> I am on! I have NOT had any involvement with mail bombs like
> you speak of so perhaps peopel should consider it.

well you know that some ISPs have mail services, and some other ISPs
allow you to relay mail, i.e. use their smtp to mail even if you are not
signed on using their access numbers and a valid account on their
servers! Trust me, i have used my school district's mail service to
forge mails to my friends on aol using the from field
'TOSGeneral '
with a few character 160's after it, looks real and did not come through
my isp's mail service. So he could of used the college's mail service,
most schools dont know what they are doing. (my school district's
computers were fixed since i was relaying mail).

3550. Icom IC-R10 or AOR8000: WHAT to Buy?

Newsgroup: rec.radio.scanner
Date: 1998-06-25 00:00:00 UTC
From: sjd@iname.com
Message-ID: <3592975c.44315522@news.netrover.com>
Source record: 155460
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm deciding between the IC-R10 and the AOR8000 for a portable multiband scanner. Any comments or experiences or advice on either model? Specifically:

- Sensitivity
- Selectivity
- Ease of use/programming
- Interfacing with PC
- Durability
- Ability to scan trunked systems
- General satisfaction with either.

The AOR covers 0.5-1900 Mhz, while the Icom only covers 0.5-1300 Mhz. Is this a selling point? Is there much activity above 1300 Mhz?

The Icom machine is almost 2/3 the cost of the AOR, so THAT is a selling point, but obviously, but price is only one feature.

Or - am I missing some other portable unit with equal or more capabilities/performance?

Thanks!

/Steve

i know! i just bought the last pro-67 for $100, normally $270!!! they want to get rid of all the scanners that dont have the TrunkTrakker built in... All are on clearance. But this scanners for $11 is unheard of... cant be true. Radio hovel is standard, every store has the same prices. I bought this one at my local radio hovel but there are 3 others i have to look in for $11 scanners... hope i find one. Amazing for Radio shack whos retail is twice the wholesale... they make a lot! but they pay their employees nil. where is all the $$$ going to?

The buyer I had fell through, so I'm still selling the following:

Mmint Realistic Pro 2006 (with box) which has a nice bright
display (the backlight is rarely turned on), cell mod, speed mod, and
the following add ons:

Installed Opto 456 (full dfmf and pl decode)
Programmit Interface (installed and mounted on top
of unit)
Discriminator tap and mini plug output on the backof
unit.
Probe 4.0 Software (the best and fastest)

This unit works perfectly an can scan with Probe upwards of 80 cps.
Plugged in to your computer's sound card it can do everything to decode
posag to provide great sound through your computer speakers. It really
is an incredible setup. I purchased it off this group about 2 months
ago and it has worked beautifully. The only reason I'm selling it is
because I picked up an R9000 very cheap.

$500 firm!

A friend made me a great deal on a Realistic Pro-2006 so now I need to sell my Bearcat BC 890XLT scanner. For those of you not familiar with this base/mobile scanner, it has the following features:

1. Turbo Scan - Scan and searches up to 100 channels per second.
2. VFO Control - Turn the variable frequency oscillator tuner to select the desired frequency or channel.
3. 200 Channels - You can program up to 200 frequencies.
4. 10 Banks - Each bank contains 20 channels.
5. 29 - 956 MHz - Frequency range that can be searched (not totally continuous from 29 - 956 MHz).
6. 10 Priority Channels - You can assign one priority channel from each of the 10 banks.
7. Weather Alert - Lets your scanner function as a severe weather warning radio.
8. Auto Store - Automatically stores all active frequencies within the specified bank(s).
9. Auto Sorting - Programmed frequencies are automatically sorted within each bank for faster scanning.
10. Auto Recording - You can record from the scanner onto a tape recorder.

The scanner includes the power supply, original telescoping antenna, and operating manual. This scanner currently sales on the Internet for $259.00. The scanner is in great condition and I am asking $175.00 or best offer.
If you are interested, please e-mail me at the address below.

Whoever you talked to at Uniden is, as usual, full of it. They sell a very nice glove leather case for about $25 including shipping. I've got one on my 235 sitting next to me right now; it's an absolutely perfect fit. The first case I got for it from another vendor, I didn't like at all and returned.

The correct phone number is not on my invoice, but you can get the phone number at their web site. Follow the links to "Product Support Services" and call that number. You want product code LC120. The price is $19.59 + $5 S&H. Note that their description for this case is for the BC120/220XLT; don't worry, it's the same case.

I am looking for the following for a Pyramid Phase 111 Model PS-25 power supply.
I need the DC amp meter & DC volts meter for this unit.
If you know of a place to order them or you know of a site of the place that makes these units,
Please e-mail the link to me.
Thank you in advance...
TRAMD300@aol.com

Hello.

I have a nice Radio Shack PRO-2040 base scanner for sale.

It has 100 channels, 800mHz reception.

In box with manual, antenna, and power supply.

Best offer.

Arrgh.... this is just a matter of semantics. In reality a cell
tower is a repeater, except it's just in phone patch all the time, and
the radio on the tower end is a complex trunked repeater unit instead
of a regular two frequency repeater.

Recieving them is easy, you can do it with the duck on your
portable scanner---- BUT...

...unless the guy is sitting in one spot (which does happen, but not
every time) You'll almost never get an entire conversation.

I would agree that they are hard to track, because I think the
"trunking pattern" is determined in an on-the-fly manner.... With
some fancy smancy software, one could probably decode the digital
signal that tells the phone where its going to turn to next.... you
could probably intercept that signal too... but... its not a
simple/cheap matter to do any of the advanced stuff.

Charles, I know exactly what you mean. I had one above the TV antenna and rotor & did some checking on this. Not a LOT of effect on high band, but the shadowed direction (looking through the center low band element) was a bit weaker. More effect was obvious on UHF, about a 25% range reduction in the worst (shadowed) direction. Of course the low band was truly omnidirectional. Aim those elements accordingly.
If it's any consolation, even the worst directions are still a bunch stronger than the RS discone I tried on the same pole!

Chuckle.

When you look at the fact that Stuart Upton is the same name that was "voting" for John as the esteemed moderator of the CB echo on FIDO, when he had never been on FIDO before the day he voted....

And you look that ole Stuart is no where to be found in Dejanews.....

Then you compare Johns posts, with those of the recent upstart Clarence Green, where the prose is identical,

And ole Clarence has never been heard of before, till his posts blasting Bill.

And others, over the months...

It is pretty obvious what John is up to. His reputation precedes him...

Message-ID: <3591CC96.6722@parg.org>
Source record: 155500

Congratulations to Ryan Faricy for obtaining his AMATEUR RADIO
license form the FCC on June 19, 1998!! (just a few days ago)

Ryan, that is a task that many people desire, but far fewer
obtain!

Ryan, I encourage you to keep on going, don't stop at
code-less tech. Keep going to extra. I am a VERY
active VE for amateur radio test under both the ARRL
& W5YI, & I have seen MANY people in my years of testing
having to start over because they progressed part way up
the license ladder & stopped. Don't let that happen to you.
I am probably one of the most active VE's in the United States
& enjoy being a VE, so once you get a higher class
license you can do it too!

>
> One of the many reasons John left Fido.

No, Blake, I name "Stuart Upton" never appeared
on the echo you mention in the time of the elections.

The only thing I could find that comes even close
is during that election you made several posts
that caused trouble which caused the RC
to have to intervene & provide actions to cause you
to cease! You were told that if you ever did it
again you would be kicked off.

After all the trouble you caused, I pulled from
the election. giving the moderatorship to Jerry
by default. He then made me assistant moderator
& you never caused problems in that echo again!
(Infact, you were hardly on the echo)

I remained as the assistant moderator of that
echo for about a year & 1/2. Then I left
my position & retired from Fidonet to take
on bigger & better things on the Internet, as many
have done! (Including your hero Bill Cheek!)

Now lets get back on topic!

Does anyone have any ideas about converting a Bearcat 250
to receive WWV signals?

No, but someone should. K4CC has demonstrated that all he
wants to do is cause problems here. His advertising of his
alliance with MARS only makes someone want to AVOID MARS.

He is probably the type that thinks AOL is an ISP!!

> It is pretty obvious what John is up to. His reputation precedes
> him...

No, Blake, I name "Stuart Upton" never appeared
on the echo you mention in the time of the elections.
(I guess YOUR reputation precedes YOU!)

The only thing I could find that comes even close
is during that election you made several posts
that caused trouble which caused the RC
to have to intervene & provide actions to cause you
to cease! You were told that if you ever did it
again you would be kicked off.

After all the trouble you caused, I pulled from
the election. giving the moderatorship to Jerry
by default. He then made me assistant moderator
& you never caused problems in that echo again!
(Infact, you were hardly on the echo)

I remained as the assistant moderator of that
echo for about a year & 1/2. Then I left
my position & retired from Fidonet to take
on bigger & better things on the Internet, as many
have done! (Including your hero Bill Cheek!)

Now lets get back on topic!

Does anyone have any ideas about converting a Bearcat 250
to receive WWV signals?

I know you dont want to know about Radio Crap, but the Pro-2045 has a weather alert mode and if I am not mistaken, it is a Uniden in sheep's clothing, although I cant remember which model it is similar to. It might also be a GRE but I think the last time I opened it up, it had Uniden markings on it. I also understand that Radio Shack is dropping the prices on these units. You also get CTCSS and a triple conversion scanner out of it. It might be worth a look despite its legacy of being from Radio Shack.

On Wed, 24 Jun 1998 18:14:00 -0600, Ryan wasted 22 lines babbling
about Steps and Cordless phones:

>Also, if a scanner has 50khz steps, and a frequency is at say
>901.0501mgz will my scanner pick it up?

Very few will tune that finely. You may get 901.050 though, no problem
if your scanner covers 900 Mhz. As for "steps" you seem to have missed
the concept. That's usually for searches. No scanner manufacturer
should ever make steps so wide though. It should go as low as 5 khz.
If you have finer tuning than that, then you're really at an
advantage. One scanner/shortwave (it has a WIDE coverage) can tune as
fine as several HERTZ, not kilohertz.But they're asking many thousands
of dollars, U.S. so it's out of my reach :(

Not sure if you know this but PCR-1000 can do 1hertz increments, and I
think WinRadio can do it as well. They are priced under $1000.

3597. PRO-2066

Source record: 155513

I have a BC890XLT and BC200XLT...cellular images come in loud and
clear, sometimes one side, sometimes both sides. And as the cell
phone travels, it is handed off to other towers, so the conversation
is lost. If someone wants to listen to cellular, seems like they
should just get a double conversion scanner, and listen to images.

My question (to those of you that have scanners with
>cell capabilities) is: Does the fact that a scanner can receive cell
>transmissions justify the cost of these used scanners? What are the
>interceptions like (broken conversations? One sided?)? Do you have to be near a
>cell site? I figure they are as hard to track as a trunked system...is this

(Please read in full before responding.)

Ah, but AOL DOES have NNTP news servers. That is how all of the message boards are handled. It also has SMTP (you can send mail through AOL's server as long as you're a member). POP3 is going to be installed within the months. You are correct in one area, however. You cannot use an external application to dial in to AOL to get full access. AOL does however, let you connect to another online service (say, CompuServe) and it can use the connection to access AOL.

AOL does provide an IP address because you can use external Internet browsers, such as Netscape, Internet Explorer, Opera, etc. to browse outside/external of AOL.

You are wrong about CompuServe, though. CompuServe DOES CREATE a Winsock Dial-Up connection in the "Dial Up Networking Folder". Also, CompuServe does have FULL POP3, SMTP, and NNTP access. CompuServe IS an Internet Service Provider. It is NOT AOL.

I've been a member of CompuServe for MANY YEARS, and I've got POP3, SMTP, and NNTP all set up with Netscape and Outlook.

Please take a look at the facts before you post erroneous information about these two online services with which I've been a member for several years.

It means that some people are not competent to decide what is truly an "emergency", so we tell everyone that they should NEVER do certain things. Then the smart ones know when NEVER happens and will do what is lawful and necessary under the circumstances.

Same here , wouldn't use less than 7/8 inch for a 450 where a long run was required.
I don't know of many repeaters that are mounted close enough to the antenna system where you could get away with using 1/2 inch.
The price diference is not all that great and it does not pay to cut corners when installing a repeater.

Some will spend $100.00 to $200.00 for a 9db gain antenna and then go the cheap route on the cable not realizing that at uhf frequencies there is a significant signal loss and the 9db gain antenna is now only a 5db gain antenna.

I have been looking at LMR COAX, basic information and pricing can be found here http://www.texastowers.com/lmr.htm
I am not completely sure about it being able to replace hardline and yet be flexible , I have to do some more research on it as I don't know anyone that is currently using it.

The price of the cable starts at .95 Per foot and goes up to 4.00 per foot and the connector pricing is within the range you would normally pay for hardline connectors .

What to listen for
Here is some information that might be useful while listing to
Bethlehem's trunked radio system.

The fire department and EMS are dispatched on either an
alpha, bravo,
charlie, or delta response to a call. A delta response
is the most rapid
response, an alpha response is the most cautious.

Moravian College campus security, Lehigh University
campus security,
and Bethlehem Area School District security all use
Bethlehem's trunked
radio system.

Here is a list of unit numbers you will hear, and what
department uses
them:

100's and 200's - Police Department (Unit 200 is theComm. Center)
300's - Fire Department (?)
500's - Moravian College Campus Security
700's - Paramedics
800's - Lehigh University Campus Security
900's - Bethlehem Area School District Security

Bethlehem's Radio Codes
Here is a list of radio codes used in Bethlehem.

10-1 - End of shift/Out of service
10-2 - Clear
10-3 - On scene
10-4 - Message recieved
10-6 - Responding (fire dept.)
10-7 - On scene (fire dept.)
10-9 - Enroute to base
10-10 - Repeat last transmission
10-11 - License plate check
10-12 - Call _______ by phone
10-13 - Call is clear (all units clear from scene)*
10-20 - Give current location
10-39 - Cancel response
10-42 - Prepare to copy information on wanted person

Code 19 - Domestic Disturbance
28 - Fall Victim
33 - Disturbing the peace
36 - Parking Violation
48 - Disabled Vehicle
56 - Accident without injures
57 - Accident with injuries
302 - Mental patient

* The fire department uses "10-13" to indicate that
they have completed
their taskes on scene and all units have cleared
from the scene and are
returning to quarters.

Message-ID: <6n15c3$t4g$1@oak.prod.itd.earthlink.net>
Source record: 155236

Hi, I'm interested to buy a scanner, and I know extremely little about it, hope the group can help. I try to shop for one with nice features, but mainly I'll use it to lisent to police, aircraft, ambulance, weather ... and may be trucker.

I've read some info about TrunckTracking, I wonder what's its advantage. I also like to have quite a lot of channels, if its important at all (?). Seems like its only Pro-90 & its Unident version fits my expectation, however, if TrunckTracking isn't really that useful, then I've heard Pro-64 is rather nice.

Local RS quoted me $130 for Pro-64, but I read from other posts (Ryan Faricy & other's) mentioned about $100. Which RS is selling at $100? (Ryan?) The same RS shop has a Pro-90 at $299 but I hadn't yet found a Uniden (BC235???) version yet, what's the right price for Uniden?

These are all I know, is there any other similar model meets my requirement? Will they be cheaper?

What will you recommend? Where will you recommend me to buy?

Tks for the help.

John (lewjw@sprintmail.com)

I am selling my BC895XLT. It was bought 2 months ago, is in mint condition, and has been used less than 25 hours. There is not one scratch on it. I am asking US$200 o.b.o. plus shipping from North Carolina. Email me if interested. After Friday night Iï¿½ll be out of town until Monday evening but will answer email then.

Toilet Boy *never* reads in full anything anyone else has to say. It would disturb his carefully constructed (and drug induced) perception of reality he has constructed in that vast crevasse formerly known as a mind. His dementia can't tolerate reality checks.

> Please take a look at the facts before you post erroneous information
> about these two online services with which I've been a member for
> several years.

You were right all along about AOL being an ISP. Toilet Boy will staunchly deny that because some time ago Bill Cheek referred to AOL as an ISP. Macktard has to deny it because Cheek said it. Look to the past postings and you see that if Cheek says black, Toilet Boy says white.

Not at all an impractical suggestion. In the Phoenix area (and elsewhere
around the country) surplus hard-line can be had for prices ranging
from free to $0.10 to $0.50 a foot. In the interest of high quality
and inexpensive cable, this is a viable alternative. Once again, for
receive purposes the 75 ohm to 50 ohm impedance mismatch is irrelevant
and in a hobby application will not noticeably degrade performance.

Not true. When I worked at Kwajalein Base Radio Station (ABK), our HF
transmitters, AN/FRT-39 and AN/FRT-40 made by Technical Materials Corp.,
(look them up in Jane's Book of Communications, Toilet Boy) used 1-5/8
inch and 3 inch heliax feed line pressurized at 3 psi with nitrogen. The
pressurization improved the dielectric properties of the line and kept
small insects out of the line.

The FRT-39s put out 10 kW RMS (a pair of PL-172/8259s in the finals)
with 100 per cent duty cycle and the FRT-40s put out 40 kW with 100
per cent duty cycle, hence the need for large line. We also put two
and sometimes three transmitters on one antenna with special line
couplers. We had fixed direction log periodic antennas that were used
for military long haul short-wave data links. Putting the same data on
three non harmonically related frequencies compensated for the Earth's
rotation and changing propagation.

> You can not apply the standards & characteristics of one band an all
> frequency bands Blake. There are substancial differences in the
> frequecy characteristics which drive different methods of equipment.

That depends on what you are comparing. If you're talking about
propagation
of two widely separated frequency ranges, then the comparison is faulty.
However, if you are comparing antennas, you are wrong. Many antenna
engineers build and test a small model of the design antenna at
microwave
frequencies because of the small physical size. It's just much easier to
work with. Then they scale it to the desired frequency and verify the
test results.

> If you would like, I could suggest some books you might read to learn
> about this.

Try getting some real world experience before you spout off with your
lame advice, Toilet Boy. Book learning only allows you to pass a few
tests. Now you need to face the real world, you friggin' loon!

Hello

Here are some logs for the North Atlatinc airspace.
Hope you enjoy them, there is a complete route clearance for
Alitalia 664 (Rome-Caracas) and also many selcal information.
You can dwonload a 'radar-view' of the airspace at the time the
logs were done at:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex7.gif

Best regards, Andre Brandao

ESPECIALLY considering the GAINS achievable by
going to the lower loss coax. In essence it
amounts to trading a pile of losses for another
pile, but with lower losses....for a net GAIN.

The guy is an idiot-savant. You'll never
get though to him. The lights are out and
he's running on auto-pilot.

So friggin sad.....

ICOM R7000 receiver
AM/FM/FMw/SSB 25MHz-1000MHz (no block)
AM/FM/FMw/SSB 1025MHz-1300MHz
$700 (firm)

This receiver is in near mint condition and includes the 12V DC option. All original boxes and manuals are included. I've also just installed a fresh internal lithium memory backup battery.

Price includes shipping by UPS ground within the continental US.

In order to decode Ericsson Trunked system .we use
Etrunk.
the EDACS system is a single frequency trunking sys.
So is there still needed second scanner for the monitoring of Data
channel ?
Or single scanner can do the job ?

Thanx for hints

Mike

isn't an "automobile"?

Ummmmmm, Smacksie.....get a clue. Start with
the definition of "cable". Once we get past
that one, which might be too much for you,
then we work on the definition of "coaxial".

When we're done, you'll see that hardline and
heliax are just types of coaxial cables.

Are you a stupid gay blade or what?

You know what they say about people who have to brag about something? As you see, there are no morons out there that have to wholeheartedly 'brag' about RS scanners. In other words, their reputaion needs to help. They are and always will be #1 !!
Any reply from you will only strengthen my point!! Have a nice day!!

3645. discriminator interface help needed

Newsgroup: rec.radio.scanner
Date: 1998-06-26 00:00:00 UTC
From: jpryor@my-dejanews.com
Message-ID: <6mvdmh$p8g$1@nnrp1.dejanews.com>
Source record: 155268

Having problems with discriminator interface. I'm eventually looking to decode Motorola and EDACS trunked control channels and Mobitex MDT systems. I am using a Pro-2045 with discriminator tapped at the jumpers for the optional CTCSS board. I have constructed the interface and the computer has failed to receive any data . . . I have tried various programs. I've measured the VAC from the discriminator to be close to 4mv. I have insured all grounding points are connected. I have also tested for voltage at other points on the 741 and on my RS232 cable and it seems everything is powered. Has anyone had luck with the Pro-2045 CTCSS jumper discriminator connection, and is the center pin on the lower three pin jumper the correct one to use? I am using the second 9way male com port next to the mouse com port. Is it possible the computer is not enabled to use that one . . . should I try using the com port the mouse is on? How do I go about assigning what com port is where, etc? Does anyone have a fool proof schematic to use . . . maybe the ones I have tried aren't optimal for my situation. I would appreciate a response, especially from those who are using the Pro-2045 in this matter, and those who are decoding EDACS. Also, If anyone has knowledge of specific accepted voltage values at specific points, that would help greatly in trouble shooting. And finally, does anyone know of a program to use to monitor com port activity/data for trouble shooting and other investigative purposes . . . Thanks alot . . . .

Jeff

I didn't belittle him Look at the subject, the first word is
"congrats". YOU are trying to belittle him by DISCOURAGING him
from upgrading.

> 1.) There is no Amateur license class known as code-less tech. I would have

The OFFICAL term is "technican" as opposed to "technican plus" which
indicates 5 WPM morse code abilities. Your arguement is stupid, like
is the glass half empty or half full.

> Ryan earned a Technician Class License, and has every right to be very proud of
> that.

Then why are you trying to belittle him & discourage him from upgrading
which might make him wonder, since you are not encouraging him to
upgrade, that perhaps you think he is incapable. PLEASE encourage
this young man to continue to acheive rather than stating the things you
have.

> he has demonstrated that he's not afraid
> to admit when he's made a mistake.

how do you justify that Ryan's upgrade was a mistake?

Yes, please do that Blake!

> >(Your suggestion of Heliax was hardly practical since that runs
> >around $5+ a foot plus $50+ per connector)
> >
> That depends John, but it was not a suggestion, merely a point.

Certainly an impractical suggestion, regardless.

> Well, understanding that you have never worked in the two way field,

I have for several years Blake. Infact you have been jealous because
YOU have never been a technical person in the radio field. You are
an administrator in an office, which is why you have to hire all your
technical work to be done by qualified & capable technicans.

how sad that you want to bring up the blown radio again, making fun
of teen age kids that wired a radio backwards & didn't protect
their powersupply with a fused output. People like you picking on
them is why kids shy away from learning.

> If you had some experience in the field, you would see sites routinely
>
> using up to 3 inch. ALL of my 800 Mhz systems have a minimum of
> 1 5/8 inch.

Certainly if you are working on 800 Mhz gear you see that often. But
not on low-band, hig-band, or 450 bands. You can not apply the
standards
& characteristics of one band an all frequency bands Blake. There
are substancial differences in the frequecy characteristics which
drive different methods of equipment. If you would like, I could
suggest some books you might read to learn about this.

Can you stop the flames Blake? Last sunday evening I suggested
a 7 say "stay" on the flaming. I have been following that
even if others have not (HINT, HINT).

> This is another example of your lies John. Even in this message to
> me, you cussed at me! You Lie John!

Where did I cuss at you Blake? What did I say?

There's your problem....or one of 'em anyway.
Proper output of the NFM discriminator is at least
100-mV and preferably 400-mV or so. Also, which
decoder circuit did you build? See the one in my
recently posted Scanner Data FAQ.

> I have insured
> all grounding points are connected. I have also tested for voltage at other

Disconnect anything connected to the Discriminator output
and measure it again. Could be there's a bad part or
an error that's loading down the signal.

Guys, it's called a "link." It's a fixed point to point UHF transmission from the NWS office/studio to the Mountaintop or Tower they use to rebroadcast on the standard NOAA VHF frequencies. NWS/NOAA is not the only agency to use UHF links. Many radio, t.v. and public service stuff is linked, up/down.

Regards,
Sean

I happen to own both Uniden and Radio Shack scanners and they are both good scanners. Both Radio Shack and Uniden make some junk, but they both also have some very good scanners. Try telling the owner of a PRO2006 that it's junk and see what answer you get.

BTW I do not own a Radio Shack stereo.

John, you say that 1/2 inch heliax is typical for 450??? Then why do all the radio shops here in town use 7/8 inch minimum??? We have probably 15 450 repeaters including our own in our building at work and only 1 (count them 1) repeater is using 1/2 inch heliax and they now wish they had spent the extra money on something larger.

Research before you open mouth and insert foot, please...

John,
Get a real life (and a job to go with it)!

After 2 weeks, 196 posting by you, and various inane or irrelevant statements on your part, I have grown tired. You insist on having others hear (or see) your point of view, regardless of whether they want to or not.

Haven't you gotten it yet (probably didn't considering his head is filled with metal of atomic weight 98)? You are not wanted, not needed and basically obsolete.

Say goodbye now john.

John, as I verified with the two way shops, in your area, you have
never worked in the two way field.

Insofar as me being technical, hell, I have posted some of my training
here, verifiable, and have been working with commercial two way since
the early 80's, off and on. I have challenged you to do
the same, and you refuse. Yes, I do not spend all of my time in
technical duties, as people progress, get promoted, take on
additional duties, etc. At least, competant people do, which may
be why the concept is foreign to you.

You, son, are the one who made a broad statement, that did
not hold up. I have 450 systems that routinely use 1 5/8 inch
heliax also.

A lot depends on the length of the cable, ie on a 400 foot run, I use
a larger heliax.

It is a concept John, and if you would only stop cussing people,
flaming them, and possibly accept Bills truce offer, I would be
more than happy to teach you some about it.

>Where did I cuss at you Blake? What did I say?

Get help John. Soon.

John likes for people to think that he has experience in
the two way field, he thinks that this will make someone,
somewhere like him. Too bad, he has so little knowledge
of the field.

We routinely use over 1 inch coax runs on UHF. Depends on
the length of the run, etc.

Have a great day.

Then don't respond. Why did you post this?

Backfield in motion....

If John can't answer the question posed, this is his stock reply.

John, Bill has proposed an ironclad truce. Why will you not accept,
for the good of the newsgroup?

Another lie. You should be ashamed of yourself.

You were the one run off. Come back, to the SCANRADIO echo. Oh, I
forgot, you can't do that.

Ok, how about the Amateur_radio echo. Oh, that's right, you can't go
there also.

Maybe the HAM_SALE echo, oh, that's right, banned from there.

Cellular? Nah, you are banned. EMS? Banned. Heck, maybe
you just can't go back!

Lies again John. You should get help.

It is not that I have not been able to upgrade, it is that I have
no desire to upgrade. Why should I bother? I can play
with electronics years advanced from what I can use
with, say extra.

The mere fact that you have upgraded, proves that anyone
can.

Hi there,

I'm new to scanning and I would appreciate any information about active frequencies used in the Richmond / Central Virginia area. I purchased a copy of Police Call from Radio Shack and I have gotten some good information from various internet searches, however, I am hoping that someone could help me save some time if they happen to have a more concise list of good active frequencies than what I have found already. I got a trunk scanner recently, so any trunking frequency information is especially appreciated.

Thanks in advance for your help.

>Andrew Clegg,

Wide FM Discriminator Out: TP1, IC1-10 (10.7 MHZ) last raw IF point before the detector is IC1-6

Narrow FM Discriminator out: TP2, IC2-9 (455KHZ)last raw IF point before detector is IC2-5 (or Q16, Q17 collectors in the AM 455KHZ path).

I think most of these are marked on the board, I just looked at the schematic. Isolate with a proper capacitor, a 100pf or less should do & be sure it isn't loading the circuit too much.

I assume you're referring to non-constant signals (ACARS,
paging, etc.) rather than trunk data channels. The squelch
(and volume) can just be turned down on those channels.

>Some programs that use discriminator output need that static
>I understand.

They may complain if they don't see any slicer activity for a while.

The original poster has his own reasons for wanting the mod;
Installing the switch will not impair his ability to decode
digital data, as he will be able to defeat the switch at any time.

TP-2 is the point (or IC-2, Pin 9), and solder
the (+) leg of a 2.2-uF (or larger) tantalum capacitor
to that point. Take the output off the (-) leg.

Go for it.

How about if you stop being a sarcastic flamming ass & simply
state what ever it is you are trying to Blake?

> And you think that 213 is the absolute best coax available?

It is cheaper & easier to work with than RG-214, yet is UV resistant
where 8214, 9913, RG-8, etc are not!

Blake, if you have another PRACTICAL recommendation, then lets
hear it!! I'm certainly open to any good suggestions you have.
(Your suggestion of Heliax was hardly practical since that runs
around $5+ a foot plus $50+ per connector)

> Well, Gosh, Gee, it can run much more than that John. If you would
> like, I could send you a catalogue from a two way supplier, that will
> give you some knowledge. Can you find someone to read it to you?

Perhaps you should find some one to read it to YOU Blake! There
are several different manufacturers of Hardline & several different
types. For example, in typical land mobile applications for
base/repeater
service you usually see 1/2 inch or 7/8 inch. Yet 1 5/8 inch or 3 inch
is occasionally seen. I am not even going to explain connectors to
you as there are FAR more options with them. If you would like,
I could refer you to some good web sites where you could learn about
the various forms of hardline?

> Even better, how about trying to be on-topic?

Can you stop the flames Blake? Last sunday evening I suggested
a 7 say "stay" on the flaming. I have been following that
even if others have not (HINT, HINT).

> I don't see how it would affect the containment of the signal.

UV from the sunlight causes a break down in the dielectric insulation
between the inner & outter conductors in coax, thus causing a
loss of signal. It takes 3 to 10 years for this effect to occur,
depending on the coax, amount of sunlight, & other factors.

> And if so, how would sitting in a display window expose the coax
> to the weather?

It isn't so much the exposure to weather as it is the exposure to
UV from sunlight. This is only if sunlight is able to get at the
coax.

> can correctly answer all the following!

Ohhhhhh nooooooo there won't.... and damn sure not
to your stupid ass...

> Did these scanners have s-meters? Or did you use calibrated readings
> of the limiter outputs?

Did you walk to work today or take your lunch? What
a dumbass pair of questions in the same breath.....

> If you used limiter outputs what assurances did you use that you
> would load down the circuit with your metering equipment & affect
> readings?

Who in their right mind would use the Limiter output?
You must be some kind of a gay blade dipshit. You
ain't impressing anyone.

> What standard were the s-meters or calibrated readings calibrated to?
> (and when was the last time the standard was calibrated?)

Who gives a flying hermaphrodite? Nothing, bar
nothing, shy of a REAL field strength meter requires
any calibration at all. Where do you think the term
"RSL" comes from? (Relative signal level). What do
you think is meant by "relative signal meter"?

> What was receiver sensitivity of each scanner? (Please give in uV)

Geez, how utterly stupid. So long as both receivers
are factory spec, it really doesn't matter. So long
as you use one receiver in two instances of a test,
it doesn't even matter if the receiver has a blown
front end.

> What were the lengths of the two pieces of coax you used?

That doesn't factor in, either, shy of absurd differences,
you warped halfwit.

> Were you using the proper connectors or did you
> have to use adaptors?

> If adapters were used what was the insertion loss of the adaptors?

Who cares, Ignats? They weren't talking about a laboratory
measurement. Adapters typically have a 0.1-dB insertion
loss.....which will NOT be seen on an S-meter. Adapters
can be declared as "lumped constants", and put into a
reasonable margin of error. It won't affect the confidence
interval anyway.......

> How do you justify that 9913 could be "by far the best" even
> compared to RG-214?

THAT, you dung-eating ignoramus, is exactly like the
game of poker where "the cards speak for themselves".

(If you got a full house, but declare it as two-pair,
you STILL got a full house, and the table has to
acknowledge it....the table cannot take advantage of
that kind of nescience.)

Likewise, you friggin idiot, the published specs of
Belden 9913 and RG-214 speak for themselves and there
is no need for justification. RG-214's claim to fame
is SHIELDING, not "low loss". In fact, the double
shielding of RG-214 makes it a trifle more lossy,
you spastic liver-lipped con-artist.

YOU, however, need to justify *your existence* and that
piece of trash you call a "ham ticket".

> > John, like it or not, you are not the god of scanners.

> I never claimed to be.

You ain't anything except maybe a halfwitted nincompoop.

> I agree, your experience appears to be limited to using 2 scanners
> & then taking that data as the final! Please, base your assistance
> on valid data provided from true specifications!

What an idiotic statement! There is no such thing as
"true specifications", you nitwit. Furthermore, you
have no clue to the guy's experience, nor what he did
with the two scanners.

And, YOU, of all people, wouldn't have the foggiest
idea of an engineering test protocol.

> I never said it doesn't work, I simply stated what would work better.

One thing that would work better is if you would
apologize to the FCC for making them look so friggin
idiotic and brain-dead by issuing you a ham license.

> Likewise, in an effort to flame me you used some pretty shabby examples.
> Why couldn't you simply accept my data & look into it rather than
> immediately try to prove me wrong?

"Tuned ladder line"? Ummmmm, say, Smacksie, just
how the hell would YOU tune ladder line, for 500 MHz?
Whup it out, greaseball. Lay it on me. And whilst
you're at it, tell me the difference betwixt "ladder line"
and TV-type twin-lead. And then tell me how "they" tune
that stuff for TV frequencies. Ha ha ha ha ha ha.....

> or have a balun which is also freq sensitive.

Are you stupid or just give off that appearance?

(Psssst, hey Hermie, baluns do not have to be
"frequency sensitive". Check out the characteristics
of a TV matching transformer sometime....those are
4 : 1 baluns. And they're good for several octaves.

Are you a nincompoop gay blade or what?

> or at least admit you have no clue! There is no such class of
> license as code-less tech!

Apparently your lack of experience in amateur radio causes you to not be aware that the EXACT title of the license is "technician". Since it does NOT represent morse code knowledge, it often is called "codeless technician" as opposed to the "Technician plus" which includes morse code knowledge. Again, Blake, in the radio electronics field any type of technician is commonly called "tech". If you would like, I could refer you to some books where you can learn about radio electronics?

> John, stop being so pompous. If Ryan has any desire to
> upgrade, then I believe he is intelligent and industrious

> at Technician level, with the privelages allowed there.

Blake, just becaus YOU have never been able to upgrade past technician is NO reason to call upgrading "pompous". There are plenty of classes & books to assist those that need help in upgrading.

>service you usually see 1/2 inch or 7/8 inch. Yet 1 5/8 inch or 3 inch

Well, understanding that you have never worked in the two way field,
and blown up numerous repeaters, it is understandable that you
feel that in "typical" land mobile installations only 1/2 or 7/8 inch
is used.

If you had some experience in the field, you would see sites routinely

using up to 3 inch. ALL of my 800 Mhz systems have a minimum of
1 5/8 inch.

So what? Are you aware that plate glass *is* a UV filter?
....and a very good one, too.

> Notice I started saying "IF the coax has been.......". Regardless,
> once he installs it, that clock will start ticking unless he
> puts it in conduit.

Yeah, meatball, *your* clock is ticking down, too.
But the facts of the matter are....by the time anyone's
coax becomes altered by UV enough to affect its
characteristic impedance, velocity of propagation;
capacitive loading; and loss, your clock will have
run out and you'll be pushing up daisies in a
Size #13EE pattern that resembles the footprint
I left on your ass before and am fixing to leave
on it again..

Look, you friggin lunatic, UV is easily stopped
by almost anything, including glass, BUT the first
few molecular layers of the polyethylene outer
insulation of modern coaxial cables absolutely
blocks any further penetration of UV. And while
that outer layer certainly CAN get pretty grungy
and nasty, the center conductor, the dielectric,
and the shielding remain UNAFFECTED......and viable
for years, and years, and years.

> They will impose an impedence mis-match (75 Ohms VS 50 Ohms) &
> you will lose signal because of that mismatch.

You are so stupid. Look, a 1.5:1 mismatch causes a
4% loss. Now take the logarithm of 0.96 (the ratio);
and multiply that by 10 to get DECIBELS loss.....here,
you idiot, I'll do it for you:

10Log(0.96) = 0.18 dB loss. This just isn't significant.
It doesn't count, especially when swapping RG-58 for RG-6
where 0.18 dB loss is offset by 2 to 4 dB of LESS loss in

the RG-6.

> > Oh really, Einstein? Just how much signal would you lose??

> You claim to haved passed an extra class amateur test, you should
> know yourself!

Well, you should have known enough to have performed
the elementary math and explained it.

You some kind of an idiot gay blade or what?

Ahem....HEY YOU NITWIT! How the hell does UV
get through the outer jacket and then the shield
to degrade the dielectric?

> It takes 3 to 10 years for this effect to occur,
> depending on the coax, amount of sunlight, & other factors.

....and other factors, for sure, you nincompoop.
Like someone holding the end of a piece of cut
coax toward the sun for 10 years....which MIGHT
degrade a few molecules of the dielectric.

Are you stupid, or do you just play stupid on
the newsgroups?

> > And if so, how would sitting in a display window expose the coax
> > to the weather?

> It isn't so much the exposure to weather as it is the exposure to
> UV from sunlight. This is only if sunlight is able to get at the
> coax.

It ain't "sunlight", you imbecile. It's UV, and
common plate glass filters UV pretty well. Besides,
what Radio Schloque in their right mind would put
coax in a display window?

Ahem.....hey, Hermie....I've got me some Belden
8214 that has been outdoors continuously since
1976.....if the math is right, that comes to 22
years. It's still good. Likewise, I got some
RG-8M and some RG-8X that's been out almost as
long. It's still good. And, I've got some RG-6
that's been out for 13 years. It's still good.
Oh, and lest I forget....I've got some RG-214
from....ummmmmm.....1968. Now that stuff is
plumb nasty to hold and mess with. But the

silver-plated shielding is STILL bright and shiny
and the outer insulation is still intact.

Are you a hermaphroditic gay blade or what?

Horsefeathers! A 1.001:1 VSWR is also a mismatch
by what you said. Get real, and put that "radio amateur's
handbook" aside. You can't read, for one, and two, you
don't understand anything that does come through.

A 1.5:1 VSWR is not a "real" mismatch.

The only real mismatch around here is YOU, you
friggin lunatic. The characteristic impedance
between your vacuous skull cavity and that
cavernous poop chute of yours is a dead short
circuit, zero ohms.

You some kind of a zero gay blade or what?

3724. BC235XLT and Poughkeepsie NY trunk freqs and cellular question.....

Newsgroup: rec.radio.scanner
Date: 1998-06-27 00:00:00 UTC
From: ROBERT J FORLINI <FORLINI@prodigy.net>
Message-ID: <6n3nh6$97ra$1@newssvr04-int.news.prodigy.com>
Source record: 155020

I'm wondering if I'm doing something wrong in trying to program these trunk freqs into my new 235xlt. They range from 852.6875 to 865.2375. It never seems to find the data channel. I don't even know if it's a Motorola type system. After each transmission ends, I hear a " beep....beep...beep" before it starts to scan again. I was told that it might be a GE type system. Is there a way I can find out for sure? Does the beeping tell anyone anything? Also, how come I could get cellular with the SC150 that I sent back but not with this 235?

Bob

to store one frequency.

12 Bands, 10 Banks -- Includes 12 bands with Aircraft and 800 MHz. Ten banks of
ten channels are useful for grouping similar frequencies and selectively
canning these groups.

Full Frequency LCD Display -- Shows the channels being scanned and the
frequency entered into each channel with backlit display.

Automatic Squelch -- A preset squelch position is provided for normal use and
allows for manual settings.

One-Touch Weather -- Automatically scans all national weather service
frequencies with just the touch of a button.

Channel Lockout -- Lock out unused or busy channels to concentrate on specific
channels.

Memory Backup -- Retains your frequency programming for 3 days without AC
power.

Programmable Delay -- When programmed on a channel, it allows time for a reply
on the same channel before resuming to scan.

Manual Channel Access -- Go directly to any channel without stepping through
other channels.

10 Priority Channels -- You can assign one Priority channel for each of the 10
banks. This allows you to keep track of activity on your most important
channels while monitoring other channels for transmissions.

Track Tuning -- This feature gives you perfect tuning on every channel
for crystal clear reception.

Twin Turbo (tm); allows you to scan up to 100 channels per second and
TurboSearchtm lets you select either 100 or 300 steps per second when searching
frequencies.

Unique Data Skip -- This feature allows the scanner to skip over unwanted data
transmissions and substantially reduces birdies.

29 to 956 Megahertz
12 Bands Including Aircraft and 800 MHz
100 Channels, 10 Banks

Full Frequency LCD
Twin Turbotm Scan and Search Modes
Automatic Squelch
Manual Channel Access Key
Priority Mode
Unique Data Skip
Memory Backup

Derek Yerger <DYerger@icdc.com> is a dreamer:

>but, if bill cheek / everyone in this ng, could help by
>ignoring mackey, then it would be ok. get it? if mackey has nobody to
>talk to he will shut up. or at least post with messages that are related
>to the topic: rec.radio.scanner.

Derek:
Suppose I posted a message on this newsgroup calling you an ignorant, flaming SOB. Would you be able to ignore that?
What if I posted information that you knew to be false, misleading or innacurate. Would you just ignore it?
What you propose is pie in the sky. Mackey is not going to shut up, and he's incapable of posting anything that relates to topic.
Nice thought, though.

More than likely, you are trying to access a system that has the SAC
enabled in the central controller. If the SAC sees a radio ID that it
does not have in its database, it will not recognize that radio, not
allowing it access.

I run my 800 sites with SAC enabled, too many people out there with
system key generators.

Hey dirtbag: I notice all these rougue cancels and forgedc posts orginating from around the Portland Oregon area. Who do you think is running around your stomping grounds worming onto any open terminal to forge Bill Cheek posts and cancel Bill Cheek posts?

Why don't you take a drive around and see if you can find the one as loony as you.

You friggin' loon.

Of course it is. "Coax" is short for co-axial. Look up co-axial and
see if it doesn't apply to any transmission line with inner and outer
conductors that are, well, co-axial.

Hardline just uses different configurations or materials for the
inner, outer, and dielectric components.

>Why can't you simply admit you were wrong Blake?

Same reason you can't.

There is an FCC web page that you can go to and input the FCC ID # of the transmitter (usually listed on the transmitter) and the page will come up with the transmitting frequency. I used to have this page address and would VERY much appreciate it if anyone has it and could pass the address around.

3759. RS Weather Alert Radio?

Newsgroup: rec.radio.scanner

"John.Mackey.KA0SSF" <jmackey@parg.org> can't remember which class is which:

>As a VE, it is better & SOP for MOST quality VE teams to speak of each
>(technician level) candidate as "codeless" or "coded" tech to prevent
>accidentally passing someone to a different license than intended.

SOP for the two "quality" VE teams I've worked with is to call the license classes what they are, and to pay attention to what we're doing so that stupid mistakes like that can't happen.

VE#11942 (W5YI VEC),

Dave, K4CC
USAF MARS - AFA2OQ
Nashville TN

ATTN: Forgers, Bombers, and Mackey

One and the same, of course, but anyway, I
hope you know that I laugh my butt off watching
the energy and resources that are being expended
in this mental fixation you have on me.

Please understand,(if you can), that your paltry
3 MB e-mail bombs arrive in seconds and are
automatically deleted in a heartbeat. Please
understand that I don't use modems anymore. My
full-time connection to the Internet is faster
than six T-1 lines put together. That means
your paltry 3MB junk files come in and are wiped
out in a span of under 5-seconds. <blink>

Your hundreds of 1-k empty e-mails are treated
in the same fashion. <blink>

So please understand the grand entertainment you
are providing me and which I now share with the
newsgroup....because you must be consuming gobs
of time and money in your obsession with me. Let's
see, at 56-kbps, it takes a minimim of ten minutes
to send those 3 MB files. Most connections aren't
near 56-k, though, and on a v.34 modem, you're
eating up 20-mins of on-line time to send ONE.

Add to that all the time it takes to create
your silly forgeries, rogue cancels, and bogus
e-mails, and WOW! You must be spending entire
DAYS with ME in your mind.

I take that as a compliment. But before you
continue complimenting and entertaining me, YOU
need to come to grips with the fact that my
computer system and Internet connection has a
titanium steel condom wrapped around it, and if
that's not enough, there's also a plasma energy
force field around it as well.

Your antics are harmless and at worst, cause YOU
a lot more investment of time, money, and resources
compared to the few moments it takes me to read and
laugh at the entries in the system logs.

Your antics have been very funny, to say the least.
And I take great pleasure in having cost you lots
of time and money to play your silly games. However,
there are lots of ISP's and Internet professionals
out there who aren't so amused.

I'm pleased to see you admitting to a criminal
act. Now folks can see more clearly why they
have to pay higher prices for stuff. Thanks
to nincompoops like you.

But at least you were stupid enough to admit
it and make a good textbook lesson for everyone
else.

Every newsgroup needs a friggin nincompoop. Thanks
to you and Mackey, we have two! Yaaaaaahoooooo!

When are you going to start your own newsgroup?
I need to know so I can help you publicize it.

3784. FS PRO-2026 Full 800mhz.EXCELLENT CONDITION!

Newsgroup: rec.radio.scanner
Date: 1998-06-27 00:00:00 UTC
From: ginny@brads.net
Message-ID: <6n3iankuo1@nnrp1.dejanews.com>

Excellent working condition and appearance.
Small size, easy to program. 1 owner, non smoker.
Comes with all original material. box, manuals, etc...
Also includes power supply. No scratches or dings.
Can be used mobile or in the home. {selling to buy a FT-50RD}
Asking $150.00. This includes s&h. Will take money order, or check.
Will wait for check to clear.
More info :

The PRO-2026 gives you access to more than
30,000 frequencies used by police departments, fire departments,
ambulances, aircraft, ham radio operators, and transportation services.
You can store up to 100 frequencies into your scanner's channels, and
you can scan and change your channel selection at any time.

Service Search-lets your scanner scan the frequencies allocated to the
police, fire, air, weather, or marine services so you can listen to the
services you prefer, even if you do not know the frequencies.

Two-Second Scan Delay-helps you keep from missing replies on a channel
while you are scanning.

Lock-Out Function-limits the scan by skipping over a specified channel
or group of channels.

Five Memory Banks-let you group channels so that you can easily scan
related frequencies, such as the various frequencies used by services
in different cities.

Priority Channel-instantly tunes the scanner to a selected channel
whenever there is a transmission on the frequency.

Monitor Memory-lets you save a frequency located during a frequency
search so you can easily store it in a channel.

29-29.7 MHz (10-Meter Ham Radio)
29.7-50 MHz (VHF Lo)
50-54 MHz (6-Meter Ham Radio)
108-136.975 MHz (Aircraft)
137-144 MHz (Government)
144--148 MHz (2-Meter Ham Radio)
148-174 MHz (VHF Hi)
406-420 MHz (Government)
420-450 MHz (Ham Radio)
50-470 MHz (UHF-Lo)
470-512 MHz (UHF TV)

Mod has been done to receive all of the 800 mhz. band

You are banned from all of those echos, and that could be easily
verified. To say that you are not, is to lie.

>perhaps we should talk about the echo(s) YOU were banned from!

Yes, please do. Bear in mind that all is easily verifiable, and I
will post email from the moderators of any echo that you state
I have been banned from, therefore catching you in MORE LIES.

Now, John, at least have the common sense to
quote the pertinant parts of the reply, where I
stated that "I have no desire to upgrade".

Failure to quote the pertinant parts, therefore
twisting the message to your ends, is the
same as lies, which you are so
proficient at.

John, as I verified with the two way shops, in your area, you have
never worked in the two way field.

Insofar as me being technical, hell, I have posted some of my training
here, verifiable, and have been working with commercial two way since
the early 80's, off and on. I have challenged you to do
the same, and you refuse. Yes, I do not spend all of my time in
technical duties, as people progress, get promoted, take on
additional duties, etc. At least, competant people do, which may
be why the concept is foreign to you.

>
You, son, are the one who made a broad statement, that did
not hold up. I have 450 systems that routinely use 1 5/8 inch
heliax also.

A lot depends on the length of the cable, ie on a 400 foot run, I use
a larger heliax.

It is a concept John, and if you would only stop cussing people,
flaming them, and possibly accept Bills truce offer, I would be
more than happy to teach you some about it.

>Where did I cuss at you Blake? What did I say?

Get help John. Soon.

I think I've asked this question before but don't remember the answer
or didn't understand enough of the answer to have the "light" go on.
<g>

Anyway, there is an old TV antenna just below my new All-Band 20-014.
It isn't hooked up at all and just resides there. I was wondering if I
should go ahead and remove it completely, or what?

> direction (looking through the center low band element) was a bit weaker. More
> effect was obvious on UHF, about a 25% range reduction in the worst (shadowed)
> direction. Of course the low band was truly omnidirectional. Aim those elements
> accordingly.

"Shadowed" direction? Which direction is that, vertical or horizontal?
Most of my listening is UHF 460MHz range.

> If it's any consolation, even the worst directions are still a bunch
> stronger than the RS discone I tried on the same pole!

That's what it appears but it'll take me a while to know for sure.

Thanks for the post!

bbowers@townsqr.com (Blake Bowers) makes the light come on:

>Come back, to the SCANRADIO echo. Oh, I forgot, you can't do that.
>Ok, how about the Amateur_radio echo. Oh, that's right, you can't go
>there also. Maybe the HAM_SALE echo, oh, that's right, banned from there.
>Cellular? Nah, you are banned. EMS? Banned.

Blake,
I have to thank you for answering a question that has been nagging at me since subscribing to this newsgroup. That is, why the heck is (John-, John., Stuart, Clarence) Mackey here?
He obviously has no interest in, or knowledge of, scanners. He mocks people who have legitimate questions with his stupid little "how can I receive 160 meter cw on my Bearcat 250" blabberings (not to mention his belittling of Technician class hams), spews out nonsensical answers and takes issue with legitimate ones.
Thanks to your post, now I know! It's because he's not allowed anywhere else!! Of course, that makes one wonder why he hasn't been banned from this group, but, with any luck, that will happen soon.
Geez, the guy even makes me almost ashamed to admit that I have a ham license. I can only hope that intelligent folk realize that he is NOT representative of the majority of amateur operators, and that EVERY barrel has a few bad apples.
Anyway, thanks again for clearing up a bit of the mystery.

Very best regards,

Dave, K4CC

Neutrodyne,

&#65533; Charles, I know exactly what you mean. I had one above the TV antenna and rotor
& did some checking on this. Not a LOT of effect on high band, but
the shadowed
&#65533; direction (looking through the center low band element) was a bit weaker. More
&#65533; effect was obvious on UHF, about a 25% range reduction in the worst (shadowed)
&#65533; direction. Of course the low band was truly omnidirectional. Aim those elements
&#65533; accordingly.
&#65533; If it's any consolation, even the worst directions are still a bunch

Yep, I know for a fact that reception changes as I rotate it.

&#65533; stronger than the RS discone I tried on the same pole!
&#65533; Neutrodyne

Same here.

Thanks!

Charles

i need advice as to what could be wrong i have a pro2006 with opto os456 board
when i run the trunk program i use my pro26 for data channel and pro2006to
follow voice but i don't hear no voice coming out it works fine with edacs it
follows the voice channels ok but not with trunker i have the trkenv.bat file
set trackscan=opto but no luck thanks jose

Way to go Ryan!

Just one thing, be advised that effective July 1 of this year the
general
test (element 3B) will be revised to a completely new question pool & 5
additional questions added. If you are up to it, you might want to
hurry
up & get that general theory (element 3B) done before July 1. On the
other hand, after just passing the elements 2 & 3A for your tech, I
certainly could understand if you wanted to take a break for a while!

No, you certainly are showing your lack of knowledge & experience here!

As a VE, it is better & SOP for MOST quality VE teams to speak of each
(technician level) candidate as "codeless" or "coded" tech to prevent
accidentally passing someone to a different license than intended.

>
> Lies again John. You should get help.

OH really!! According to the FCC database, you are STILL
a technician after all these years!

> The mere fact that you have upgraded, proves that anyone

> Cellular? Nah, you are banned.

Nope, I have never been banned from any echo other than SCANRADIO
when Bill Cheek was kicking 2-3 people off a day if he felt they
threatened his control of the group.

EMS? Banned. Heck, maybe

Again, not banned from that echo either. Infact, I have never been
on that echo in my life!

Perhaps we should talk about the echo(s) YOU were banned from!

He didn't. He referred to you as "crap".
Me, I'd have found a slightly more descriptive
term for you than "crap", though they mean
the same thing.

> Get off Ryan's back & stop bothering him!

He's not on Ryan's back bothering him. You're
just too stupid to see that he's on YOUR back,
bothering YOU. He's smacking you smartly on the
arse, yelling "giddyup, giddyup" as the crowd
cheers, "Ride 'im cowboy, ride 'im!" And you're
a buckin' and a shuckin' like "The Strawberry Roan".

And is he ever getting a ride! Whooooooey!

Hey, Smacksie, if I had a mongrel cur dog as
dumb and ugly as you, I'd shave 'is arse and
teach 'im to walk bass-ackwards when folks were
around. Know what I mean?

From: smokedtofu@aol.com
Message-ID: <19980627040118800.AAA27999@ladder03.news.aol.com>
Source record: 155189

I would like to trade an ICOM R-10 (cell unblocked) with Diamond antenna, ac power supply, box, and manual in excellent condition for a Sony 2010 shortwave and possibly an active antenna.

Icom and antenna were approx 425.00 and mod was 35.00. I see Universal Radio has the 2010 for 349.00. This would probably be an even trade. I live in the Cincinatti area and would be willing to drive a radius of 100 miles. If not then other shipping can be discussed. Thanks

<Groan> <Siiiiiiigh> Yes, that is the gravest
concern of them all....how a newcomer to the
newsgroup might think John Mackey walks on
water and jumps into his skivvies both legs
at a time.

They just have no way of knowing that Mackey
is a wretch among wretches; vile among the vilified;
and not even accepted by his fellow men's room
attendants. Hell, even the MRA Association labeled
Smacksie "Degenerate of the Year".

> On the other hand, I'm heartened when I see people like
> the Faricy kid who see right through him in a heartbeat!

Well, that doode got off to a bad start, but he's kind
of starting to show some promise, I guess. A lot
depends on if he buys into the blubbering sweet nothings
that ol' Smacksie is trying to lay on 'im.

Time will tell, I guess. <sigh> One thing for
sure....we're eyewitnesses to history. ;-)

jpryor@my-dejanews.com wrote:

>I've measured the VAC from the discriminator to be close to 4mv.

As Bill Cheek has already stated, this is far too low. Although
the op-amp circuit can be adjusted to handle a variety of signal
levels, 4 mv won't cut it. Perhaps you should try to get the
audio directly from the source, rather than at the CTCSS board
connection.

>I am using the second 9way male com port next to the mouse com port.
>Is it possible the computer is not enabled to use that one . . .
>should I try using the com port the mouse is on?

No harm in trying it. It's a sensible troubleshooting technique.
I assume it isn't a PS/2 type (bus mouse) connection.

>I would appreciate a response, especially from those who are using
>the Pro-2045 in this matter, and those who are decoding EDACS.

Bear in mind that a fairly clean signal is required to decode the
9600 bps EDACS data stream.

>Also, If anyone has knowledge of specific accepted voltage values at
>specific points, that would help greatly in trouble shooting.

That's easy enough; With the decoder of your choice running and
the audio source disconnected,

+12 volts on the + supply pin of the op-amp
-12 volts on the - supply pin of the op-amp

(note that some PC's, mainly older laptops, provide only +/- 5 volts
to the serial port, but the operation of the slicer will be
unaffected)

~0V on the + signal pin of the op-amp
~0V on the - signal pin of the op-amp

(all voltages are referenced to signal ground)

Temporarily connect a high-value resistor (100K to a few megs)
from the op-amp side of your input capacitor to the +12V supply
point, then to the -12V supply point; The output pin should flip
between +12V and -12V as you switch between supply points.

These tests will not detect insufficient conditioning of the
supply voltages. You must use 0.5 uF or better caps on the
power leads.

>And finally, does anyone know of a program to use to monitor com
>port activity/data for trouble shooting and other investigative
>purposes

If you'd like, I can email you a utility specifically designed to
test data slicers. It requires a CGA or better display and handles
COM1 through COM4.

...Andy

There you go again John twisting what someone else said so you can start some more trouble on the newsgroup.

The only one on Ryans back is you , no one said Ryans license was crap, what actually was said is you don't need to start your code-less tech crap and now your trying to twist it around to make it look like Dave is calling code-less techs crap.

Do you really have to sink so low as to drag Ryan into this, what has he done to you except show that the garbage your were trying to pass off on here as being the only factual infromation was not so.

Just because a 15 year old has more smarts then you is no reason for you to create problems for him on the newsgroup by your twisting of others statements.

Grow up John and see the reality of life , the world does not revolve around you , your not the smartest person in the world , and that your lower than pond scum for trying to take away from Ryans accomplishments.

Just goes to show that jealousy will make John sink to new levels in his flaming on here .

To stay on topic , a friend has a 2006 and the back light has gone out, does the 2006 use the mini light bulbs and are they easy to replace ? My Icom V-100 uses light bulbs for it's back light and was hoping the 2006 does also.

3843. New Scanner NG

Newsgroup: rec.radio.scanner
Date: 1998-06-27 00:00:00 UTC
From: reallybigguy@hotmail.com
Message-ID: <6n1v4hdpo1@nnrp1.dejanews.com>
Source record: 155203

How would I go about starting a new scanner newsgroup? I propose that I or someone else create this new ng and let ButtCHEEK and Smacksie have this one all to themselves. We could call it rec.radio.scanner.nocheek.nomackey. I say we go with it. These two idiots waste more time trying to outwit each other than anything else. They think they're so damn intelligent, instead they're two little children trying to get the last word. This goes for all their little no-brain followers as well. If one of the two morons never responded to the other, then the other would just go away. Anyway, can this new ng be fired up or what?

Three lies in one sentence, Smacksie-poo!
Man, you YOU ARE getting good at it, too.

Ummmm, Smacks, you had your sorry arse booted
out of at least five FidoNet forums that I know
of, including MINE..... And the truth of the
matter is that I booted 2-3 people (like you)
a week for maybe 2-3 weeks running on account
of the ruckus you stirred up.

And no one can threaten control of a FidoNet
forum. Each forum is the personal property of
the Moderator. You are REQUIRED to abide the
rules. Those forums are not cradles of "free
speech" or "Democracies" as you seem to still
think. You ARE a guest there, same as if you
walk into someone's home.

You've violated all the laws of Nature, Man,
and Cosmos, Smacksie. It's no wonder your tail
feathers have been singed and clipped everywhere
you go. What is a wonder is how your PARG
goooooooodbuddies have tolerated you for so
long.....but I think I have that one figured
out now.

It's a good bet that the Phairies Asinine
Radio Group is a group of one: YOU. Sheesh,
you have a monstrous identity crisis as it is,
with a couple dozen known AKA's.

You lying, wretched, degenerate nincompoop.....

>modified HT is "taboo". Whatever that means.

Steve,
I would guess that he is making a distinction between transmitting out-of-band during an emergency, or just doing it casually or maliciously.
The authorization to transmit out-of-band is very definitely only applicable to certain narrowly defined emergency situations - when no other communication is possible AND life or property are threatened.
To transmit on a police frequency to report a flat tire, or to stage a hoax, or to intentionally interefere with police communications is CLEARLY illegal (taboo) by anyone's definition.
I think the original thread had to do with a situation in which a ham transmitted on a sheriff's frequency to report that his hiking companion had been injured, after he was unable to get a response on any amateur repeaters.
Fortunately, most of us will never encounter a situation where he have to make that judgement call -- if we happened to have equipment that had been modified to transmit outy of band.
It's no wonder it's confusing, Steve .. it's government regulations!

Nick, thanks for the reply. I'm thinking of sending back the 235 and picking up the 150 again. Since the trunking doesn't work around here and I don't think I need 300 channels. I'd rather have the cellular ability. Does anyone know of any other advantages that the 235 has over the 150?
I'm looking for someone to convince me to keep it.

Sorry to be off-topic, but:

It is funny how even a little post that says "Hi" can be turned into a huge thread of name-calling and flame-fests...

A very surreal but interesting group, no doubt!

Another little minor change for your header? Still carrying on
research "for the good of all people someday?"

Another tidbit: I accuse you of slinking into community colleges and
libraries in the Portland, Oregon area and issuing Bill Cheek forgeries
and rogue cancels of Bill Cheek's posts from unattended terminals at
those locations.

Just so we're clear. I believe you bear responsibility for those
shenanigans. I don't care what your current lie is.

Back to your most recent header change: I think I see that herculean
zit coming back on your mug. Oooooh. Here it comes!:

REPOST:
I know it's not my turn yet,....I simply can't stop now.

Okay, let's get this straight:

Everybody's grumpy in the tree-house except Mackey, because..well...he's
being
Mackey!

1) The 'DOKTOR' reaches over and firmly, but gently "Whacks" Mackey
about
changing his message header in tiny ways to worm past filters erected to
keep
him out.

2) Mackey rubs the back of his head and squawks "THAT'S A BOLD FACED
LIE!".

3) Whereupon Richard Kendrick immediately produces two different headers

(case change of the letter "k") from a couple of fresh Mackey missives.

(sssssssssssssWHHAAAACKKK!!!) Big group giggle. My ears are ringing,
but

I'm still giggling.

4) Then Phil Smalley (still giggling) asks "I'm going to regret asking,
(giggle-giggle) but if you didn't change the header to bypass killfiles
then
what's the real reason Mr. "MacKey"?? (giggle) Name change or something?
(hoo-ho) This oughtta be good.
(giggle) Do tell.

5) And Mackey, not even attempting to deny the changed headers, starts
playing philanthropists and actually claims to be experimenting "for the
good
of all people someday!" with his own prototypes of "next generation of
tools
for e-mail."!!!

BawHAAhaHAAAAWHAHA! Whooooohoo! Mackey the Scientist! Are you a
"Secret
Agent" too? Oh..hold it, ...you couldn't tell me if you were!...Right?
RIGHT?

Aw jeez. You're friggin' unbelievable Mackey. Oh, Richard and Phil,
fantastic follow through, first rate work. Sorry about the liberties I
took
on your text Phil, but that's what I heard when I read it. Maybe I
projected
my own glee into it.

As for you loony boy:

I can already hear ya squawkin'
"IsupposeyouhavesomePROOFofyour..nyanya.."

I copied the whole thread into my most treasured archive. If you insist
on
proof I can post.......

Naaw, screw that. I'm gonna post it now. And you're gonna see it again
Mackey; kinda like a Herculean Zit that returns again and again to plant
its
puss-filled mass on whatever unscarred skin you've got left on your face.

Roast in sweat.

You friggin' loon.

You're absolutely right, Sal. Strategically placed det cord would take out a small dish quite nicely. Something akin to a "surgical strike."

> damage from the shock wave. HTH

True, that would be consistent with the more is better method. I prefer just the right amount of a shaped charge in the right spot. I love the expressions on that kind of a wake up call.

Also remember, there is nothing that can't be solved by a suitable application of high explosive. Except for, maybe, a dose of the clap.

3873. SKIP all day; more

John "I can service more men in any bathroom in one hour than can fit in the bathroom" Mackey.KA0SSF tried to act as if he had a clue to the real technical world:

> Good for you Richard! You should try to market it on rec.radio.swap
> as you could make a profit ! The prices you mention are rare!

You must not get out of the bathroom stalls much. Surplus hard-line is available all over the country at reasonable prices. The skill is in finding it. All you can find is your hands and knees in some dark public bathroom waiting for your next "john".

> Perhaps, but this is hardly a "typcal installation" as compared to
> land mobile as we were discussing, wouldn't you have to admit?

I was talking about a typical installation, for a professional installation that is. A professional installation is something completely alien to you. That is unless you've been entertaining visitors from foreign countries in the bathroom again.

3877. Cordless Phone Question

Newsgroup: rec.radio.scanner
Date: 1998-06-28 00:00:00 UTC
From: Howard <Howard*V@Bigfoot.com>
Message-ID: <3596F481.D92095E2@Bigfoot.com>
Source record: 154931

I know there are many types of cordless phones (10 channel, 25 channel, 900mhz, etc.). For this example, lets talk about a basic 10 channel cordless phone which can be scanned in the 46.5 to 47.0 mhz area. Let's also assume two neighbors are using identical Sony phones.

If both neighbors are using the same channel (lets assume channel 2), how come the phones don't intercept each other? For example, I may be listening to a certain phone conversation on 46.83mhz. All of a sudden, another conversation (slightly stronger signal) takes over and now I'm listening to the neighbor closer to me. The neighbors never hear each other, even though according to my scanner, they are using the same frequency. Why is this?

I hope I've made the question clear enough so you can understand what I'm trying to say! Thanks for the help.

John "I'm such a douche bag and I can't stop crying because I can't find shoes to match the bag" MacXkey.KA0XSSF left his bathroom stall long enough to grunt:

> Likely Bill Cheek! He often brags about his knowledge of how
> to do things on this computer that other can't do.

Hmmm, writing a monthly column in Monitoring Times (not to mention three books) would expose the author if he knew nothing about computers and tried to show he did. Since running a magazine is really about making money, I think Bob Grove wouldn't keep a column or it's author if that individual wasn't helping the magazine to make money. It would stand to reason that Cheek might know a thing or three about computers by now. Since you don't write a column and have never published one book, let alone three, it appears that Cheek does know more about computers than you do, Toilet Boy. No surprise there.

> He has been caught red handed doing exactly these things in the past.
> (Ref: Billy Thunder or WinRadio posts)

And I forged your identity some months back just to show how easy it is to accomplish. All it proves is *anybody* can do it. Since I've forged your identity, in your twisted logic, that must make me guilty of the recent rash of forgeries and rogue cancels. It you think that is true, let's see you prove it FOOL!.

> From a personal prespective, Cheek likes to attack me what ever way
> he can. This goes back to the fact that about 3 years ago I uncovered
> him to a group of users who then realized that he was causing trouble.

Another one of your petty lies, FOOL. Here's one of your favorite phrases
for you. If you don't believe it, look it up in DejaNews.

> He has done everything he can to attack me since. At this time you
> are seeing a perfect example as I have done nothing to attack or
> flame him this week yet he has attacked me every day of this week.

You've earned the wrath from everyone that has flamed you to date, Toilet Boy. You're too much of a moron to recognize that your Pavlovian fixation on Cheek is the cause of ALL the problems in the scanner groups today. You are one sick puppy and really need help. Perhaps if you take one 9 mm in the head and call us in the morning.

> (I expect this post to be flamed by Cheek and/or his mesmerized
> supporters!)

You are the only one here that is mesmerized by Cheek. You are so
totally
fixated on him that if he says black you'll say white. Not because it
may be correct, but because Cheek said it. Allsafe is still right,
you are a friggn' loon.

Howard--
Imagine a line drawn thru the locations of your neighbors. Construct
the center point, on the line, between the two neighbors. Pretend that's
you. The neighbors will always be twice the distance from each other that
they are from you, and an additional 3db down. Obviously your situation is
not as geometrically pretty as I've hypothesized.
The point is that the handset is usually much closer to the base than
you (or the potentially interfering neighbor). Probably as much as 9-15db
up. If one of them moves away from the base (goes into the yard) the AGC
will bring up the gain and they will get interference. I know I do.
I've observed the same effect as you. If the power (at my antenna) from
two transmitters is about equal I get the howling-type interference. If one
is marginally greater than the other it heterodynes more strongly in my
front end.
You can, with practice, use it to very roughly locate units on the same
channel.
Hint, the Radio Amateurs Handbook gives a lot of info about things like
this.
HTH

Source record: 154967
Cross-posted to: rec.radio.swap,alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Recieves on:
29- 54mhz FM
108-137mhz AM
137-174mhz FM
406-512mhz FM

Has 50 memories in three banks. "Private" bank holds 20 user selectable freqs, "Police" bank holds 20 user selectable freqs and has a bunch of pre-set freqs that can be locked out, "Fire/Emg" bank holds 10 user selectable freqs and has has a bunch of pre-set freqs that can be locked out, "WX" bank does all weather freqs, and "Air" scans the entire aero band. Unit uses a mounting bracket, which was lost by the previous owner. Not included. No manual, but I can instruct on how to program it. Runs off of 12v DC, power supply not included. Basically, just the unit itself. But it'd be a great little thing to keep out in the car or truck.

It works just fine and has no problems.

Asking $70, or best offer. Remember, the price is open to negotiation.

I'm selling because I'm currently between jobs and don't use this at all anymore. I picked it up to put it in my car, but never got around to doing it. I need the money more than I need the hobby.

Remove the second, anti-spamming N from the end of tdragon in my address to respond, tdragonn@blarg.net

I had one of those once. Every frequency has a binary code for entry. 0s and 1s. For each channel you work the channel toggle switches to the proper setting and then enter. I dont remember anything else. Good luck on finding more info.

Howard

Don't try to blame the forgeries, cancels, & bogus posts on me!

Simply by looking at the IP address of the computers anyone can
see that it NOT coming from ME. Perhaps you should look at your
hero BILL CHEEK, as in the past bogus posts have been seen coming
from the SAME IP ADDRESS as his computer!

Remember the "Billy Thunder" & the "WinRadio" posts? Proof positive!

>Does anyone know a good(inexpensive) source for a
>replacement battery-pack for the BC3000XLT.
>Uniden has decided to charge $52.95 for a replacement pack...

You can buy the replacement NiCd insert for about $15 - $16 plus
shipping from:

Battery - Tech Central
2818 Southland St. SW
Cedar Rapids, IA 52404-4141
ph. (319)364-0855
fax (319)366-7294
email rlassoc@inav.net

They attend hamfests in the Midwest, too.

The Japanese-made insert is equipped with solder tabs
and bears a W&W label.

I (carefully) opened the BP2500 pack, removed the original
insert, and installed the replacement without a problem.

Actually I think Uniden Scanners are the easiest to program. You bring up the channel number by pressing the channel # and the hold key. Just enter in the frequency and press the "E" key. Its now programmed. Just do that for as many channels you want and there you have it. If you have any more Q's email me. Good Luck with the programming

One thing about CTCSS which occurs on my ambulance corp frequency is there's a bus company on the same frequency. Since the bus company puts out more power it overrides the dispatch even with the CTCSS. But Tone Squelch can also improve your range of recieving because you can open your squelch all the way without the snow sound. Only transmissions with that PL would open the squelch. ANd its great not to hear "base to bus 101 Donald, did LuLu leave her bookbag on the bus" and so forth.
Best Regards,
Steve

>obtain parts. Thank you in advance. Jim AA0FJ.

Order a 154.175 crystal (Bomar, ICM, etc). You should not have to
realigh the receiver, just net the crystal on freq.

If your single tone is 384.6 or 473.2 (or +/- 2%) you don't need to
modify the tap on the inductor or change any caps. You may have to
change the inductor and capacitors on the tone filter boards to make
it respond to the new tone. There is a chart for closer freqs. in the
manual. The inductor is not modifyable.

What's the single tone freq? (I'll tell you if you can use the boards
you have right now based on the tone freq. You will end up using only
one of them strapped for the "A" tone (the cathode of CR1 goes to EA,
not EB). After modifying the board to the appropriate tone freq range,
cut the wires going through to the B board then use a 'scope or a true
RMS ACVM to tune the core of L1 and/ or C5 to max VAC output from the
network (varies for older and newer filter boards).

The dou-tone decoder board is similar to the single tone board, but
there is an additional section for the B tone detection.

Here's how to convert the 58-6026 board to a single tone board. Save
the parts and go in reverse to un-do the mod:

1) Remove CR-9, R44, C15, Q5, C14, R36 and CR10.
2) Change polarity of CR-8.
3) jumper across where R44 used to be.
4) Change R10 to 3.3M (for timing- leave it alone for quicker
detection but that could false the decoder), R9 to 390K

Parts are available through DigiKey or the Shack if you re-use the
boards or you can cheat and use the existing receiver with a new
Selectone ST120 board strapped for maximum detection delay to decode
the single tone.

I may have some junk around from other receivers. Contact me via
e-mail if I can be of further assistance.

73 & Good luck,

Steve

>Sounds humerous, whoever it happened to!

cheeks used to work on mounting sat dishes when he lived here in Littleton, colorado in the early 1980's. he was mounting a sat dish up on top of a pole. he had it mounted to a pole, then was going to use a block/pully arrangement to lift the pole up to the necessary position. the pole went up, but he use so much force that it went right back over & landed on some high power wires on the other side. the electrical charge blew up and melted the dish, and cheek spent about a month in the hospital recovering. he had to be air lifted via lifeflight to the university of colorado medical center. i heard from his x-wife that he had amnesia for a while plus some other mental problems. she said he never fully recovered from this and they later divorced as he had turned bi-sexual after the experience. he attempted to get counseling at the VA (since was in the army) but no recovery was seen. this caused him several problems!

Start haunting them in late July, to get one. Since they quit charging for it, the stores get an even smaller allotment of them now than they did before. It's a pain, but if you wait for September you may not get one.

Of course, "mozilla" is simply the identifier of "Netscape". But how
do you know that Bill wouldn't think to use something different? Infact,
if he was attempting to cover his tracks he probably WOULD use something
different.

> and mackey you used mozilla but not exactly the same version.
snip
> but then of course mackey... he is using mozilla.
> can you change version numbers easily?

No, there is no way to chaning the identification
of Netscape/Mozilla. I confirmed this by speaking to Netscape tech
support, and reading the "Un-Official Netscape" tech support
web page at the University of Florida.

> I could be concluding that neither of you have been forging these...
> probably some idiot that is looking to start a flaming war, or someone

Likely Bill Cheek! He often brags about his knowledge of how
to do things on this computer that other can't do. He states
to have internet access similar to that of a T-1 or T-3 (I
don't remember exactly which he claims). In theory, he could
simply use that bandwidth ability he was to use RAS (remote access),
telnet, PCanywhere, or other similar software to remotely
forge such messages in his effort to cause mayhem on this NG in
a desire to attract attention to himself. He has been caught red handed
doing exactly these things in the past. (Ref: Billy Thunder or WinRadio
posts)

>From a personal prespective, Cheek likes to attack me what ever way
he can. This goes back to the fact that about 3 years ago I uncovered
him to a group of users who then realized that he was causing trouble.
He has done everything he can to attack me since. At this time you
are seeing a perfect example as I have done nothing to attack or
flame him this week yet he has attacked me every day of this week.

So, the real Bill Cheek shows his true persona!

(I expect this post to be flamed by Cheek and/or his mesmerized
supporters!)

3932. Cherry Festival Airshow

>What are the PL numbers that I see in frequency directories and how do you
>use
>them?

If you get a scanner with CTCSS (same thing as PL...PL is the Motorola trade name for CTCSS), the PL tones listed in the frequency directory will allow you to eliminate all traffic on that frequency other than the agency you're trying to monitor; basically, it helps eliminate a LOT of garbage. It's VERY nice.

Most of the higher-end scanners support CTCSS. I have a RS PRO-2036, with a CTCSS board installed. My technical ability is such that I can barely screw a lightbulb into a light socket, but I installed the board (which I ordered from Radio Shack when I bought the scanner) with no problem. You then enter the CTCSS tone into the memory along with the frequency.

A very helpful little tool, even for minimal scannerists, such as myself.

Good luck,
David

Source record: 155058

I have recently purchased a Pro 90, which I love.
Are there any mods that have been made available
for this model ?
Has anyone found a way to restore the audio output
via the earphone
jack to a normal level which can be heard. I
think I may have stumbled
upon the answer to this one, but im not sure how
to fix it. In my car,
I have an external antenna with an elbow BNC
conector, and a modified
Motorola Public Safety Speaker Mike with a metal
mini plug. One day I
noticed that the audio was getting louder, and
when I looked at the
radio, I noticed that the BNC and mini plug were
touching each other.
It seems that the radio has been produced, unlike
earlier models, without a built in ground between
the antenna and earphone jacks. Is it possible
that this is the true cause for the diminished
volume from the Pro90 earphone jack, and if so,
how can this be corrected.

>After each transmission ends, I hear a " beep....beep...beep" before
>it starts to scan again.

What your describing is probably a GE system. The beeps are meant to thwart scanner listeners like yourself from monitoring the system. While your scanner is holding on the frequency with the beeps, the rest of the conversation is already taking place on another frequency. It would also explain why your 235xlt wont "find" the control channel.

> Also, how come I could get cellular with the SC150 that I sent back > but not with this 235?

It mainly deals with IF frequencies and conversion types, which someone else with a little more knowledge about scanners might be able to answer. I think the main problem might be that the SC150 uses double conversion while the 235xlt uses triple conversion.

3948. AR8200 Initial Impressions after one day

3949. Trade or Sell Tektronix Phaser 220i /for short-wave and or GR300/500

Newsgroup: rec.radio.scanner
Date: 1998-06-28 00:00:00 UTC
From: EyeSpy <deltax2x@hotmail.com>
Message-ID: <01bda240$cec0f240$baae20cc@turnerbl>
Source record: 155061
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.swap

I am looking to trade or sell my Tektronix Phaser 220i Color printer
14mb's onboard (Max), PC/Macintosh compatible (win 3.1-98+, Mac OS
7.0-8.0+). 200 Sheets A4 matt finish paper (for best graphic results).
100 sheets of overhead transparencies. Additional integrated paper
storage(I use for overheads). 2 Additional Color Rolls
Less than 100 sheets printed (can be verified by a status check on
printer.)
Each Color roll does 345 Prints

Will take $1,000.00 Postal Money Order OR I will trade this unit for a
GR300 / GR500 Series Repeater in UHF. The unit needs to be 25 watts or
greater, with 2 channels. These units must be in good working order I will
verify with my Radio Tech to the condition of unit. Original Boxes not
important, but would be useful to have manuals and all misc items that came
with them.

I will also consider trades for Short-wave units, please send unit specs.

All Reasonable Offers will be considered

I have a radio shack pro34 with cell mods done,and a faster cpu crystal for sale. Price is 85.00 firm plus shipping. The front of the case is new, the back has some scratches, and the back bottom clips on the inside that holds the front and rear cases together are broken. I have epoxied the bottom of the case together. The scanner works fine, but I don't need another one. Email me if interested at Tal35@aol.com or Tal35@favmail.com Thanks, Todd

Message-ID: <6n4hp6$3be$1@nnrp1.dejanews.com>
Source record: 155066

I managed to get it working with a little luck . . . . after fixing the main problems, I just had to tweak a couple resistors . . .

> >I've measured the VAC from the discriminator to be close to 4mv.
>
> As Bill Cheek has already stated, this is far too low. Although
> the op-amp circuit can be adjusted to handle a variety of signal
> levels, 4 mv won't cut it. Perhaps you should try to get the
> audio directly from the source, rather than at the CTCSS board
> connection.

Ok . . . first I should figure out how to read my meter . . . . it was around 400 millivolts . . . the CTCSS jumper pin connection worked fine . . .

> >I am using the second 9way male com port next to the mouse com port.
> >Is it possible the computer is not enabled to use that one . . .
> >should I try using the com port the mouse is on?
>
> No harm in trying it. It's a sensible troubleshooting technique.
> I assume it isn't a PS/2 type (bus mouse) connection.

That seemed to be the main problem, I found out that the port I was using did not supply any positive voltage . . . switching to the mouse port helped by powering the cicuit correctly . . . .

> >I would appreciate a response, especially from those who are using
> >the Pro-2045 in this matter, and those who are decoding EDACS.
>
> Bear in mind that a fairly clean signal is required to decode the
> 9600 bps EDACS data stream.

I seemed to have pretty good results . . . the EDACS system I monitored is probably around 5 miles away, once my city gets theirs up and operating, the transmitter is less than a mile away . . . should have even better results . . .

Thanks alot to all those who helped and to all those who provided the resources and software on the net . . .

3955. FS: Yupi 9000M2

Newsgroup: rec.radio.scanner
Date: 1998-06-28 00:00:00 UTC
From: Paul Savastano <Savy@ma.ultranet.com>
Message-ID: <01bda248$90430be0$224306d1@savy>
Source record: 155067

This radio has been used less than 1 hour, batteries have never even
been put into the radio for charging, still packed. Comes with car adapter,
strap,
ni-cad batteries, belt clip and I will throw in the 12v AC adapter that I
purchased
at radio shack.
The M2 is a modified version of the regular 9000
What are the differences:

30% faster search speed

10.8 intermodulation problem is 40-70% smaller than the 9000 and the other
similar radios (I have no idea what this means)

RX-Light gives you visible indicator of squelch status, can also see status
of battery
save function.

I have the certificate that came with the radio on these mods and the
speed test performed before and after.

Why am selling?

To powerful of a radio for me, I just got into scanning and this radio
quite frankly is to complicated
for me I am going to start out with something much simpler. If you are new
to scanning like
me this radio probably is NOT for you. You can read all about it on Rich
Wells web site

http://ns1.qsl.net/n2mca/RADIO.HTM (main page)
http://www.qsl.net/n2mca/RADIOS.HTM (scanner reviews)

Sell for what I paid minus the adapter $550

Please e-mail if interested

Does it really matter if it's illegal? Sheesh! All you have to do is say
you were listening to your scanner and the conversation bled over to one
of the frequencies programmed into your scanner...happens all the time for
me.

Oh yea! SAC enabled will stop'em cold. Shhheeeiiit!

Just fire up trusty trunker.exe, and let all those "valid" radio IDs populate
the window......you will have your pick of the mill.

Do you Motorola Systems Administrators really think that SAC will stop them
cold? You folks must be dreaming if you think that Motorola Systems are
secure. Its a wonder folks haven't started using these systems for their own
benifit. Good job Motorola!!! You've got a REAL security issue on your hands
now!

Yes, but you will have to wait awhile. The publicity of El Nino has created more demand for the product than RadioShack anticipated. It could be some time before another batch makes its way across the Pacific. It is a great weather radio though. Shows a read out of exactly what the statement, watch or warning is for. Of course it has a battery backup and even an external antenna connection if you need it.

I'd recommend C4 but you could probably do a dandy job with just
Det cord alone. If you really wanted to go nuts, you could use a
whole TNT block but that would be overkill and you'd probably get
a lot of collateral damage from the shock wave. HTH

Bob,

I'd like to personally thank you for your ongoing efforts in tracking
rogue cancellers and forgers. I know from following n.a.n.a.u.,
that you've been working on bigger things so be aware that your
efforts in this news group are not unnoticed and are appreciated.

Message-ID: <19980628121718O1.IAA25833@ladder03.news.aol.com>
Source record: 155086

I sold the first one I posted yesterday fro $700. I have a second one for sale. This one is also in MINT condition with no problems or scratches whatsoever. The radio comes with AOR software, computer cable, ac adapter and manual. The radio was very seldom used. I need the money more than the radio right now.

Sorry, this one does not have the box, I'll take $50 off for the missing box. Will ship for $650 + $10 shipping within continental US.

By the way, this radio has a very helpful mod if you are into decoding. A second earphone jack (wired in parallel) was added in the back of the unit. This will enable the user to have a decoder hooked up to the earphone jack, while still able to monitor any audio tones. Some people like this the ability to be able to listen to the tones as they fine tune a freq.

ATTN: Forgers, Bombers, and Mackey

One and the same, of course, but anyway, I
hope you know that I laugh my butt off watching
the energy and resources that are being expended
in this mental fixation you have on me.

Please understand,(if you can), that your paltry
3 MB e-mail bombs arrive in seconds and are
automatically deleted in a heartbeat. Please
understand that I don't use modems anymore. My
full-time connection to the Internet is faster
than six T-1 lines put together. That means
your paltry 3MB junk files come in and are wiped
out in a span of under 5-seconds. <blink>

Your hundreds of 1-k empty e-mails are treated
in the same fashion. <blink>

So please understand the grand entertainment you
are providing me and which I now share with the
newsgroup....because you must be consuming gobs
of time and money in your obsession with me. Let's
see, at 56-kbps, it takes a minimum of ten minutes
to send those 3 MB files. Most connections aren't
near 56-k, though, and on a v.34 modem, you're
eating up 20-mins of on-line time to send ONE.

Add to that all the time it takes to create
your silly forgeries, rogue cancels, and bogus
e-mails, and WOW! You must be spending entire
DAYS with ME in your mind.

I take that as a compliment. But before you
continue complimenting and entertaining me, YOU
need to come to grips with the fact that my
computer system and Internet connection has a
titanium steel condom wrapped around it, and if
that's not enough, there's also a plasma energy
force field around it as well.

Your antics are harmless and at worst, cause YOU
a lot more investment of time, money, and resources
compared to the few moments it takes me to read and
laugh at the entries in the system logs.

Your antics have been very funny, to say the least.
And I take great pleasure in having cost you lots
of time and money to play your silly games. However,
there are lots of ISP's and Internet professionals
out there who aren't so amused.

Scanners have not been modifiable for cellular
since April, 1994, thanks to an Act of Congress.

See my SCANNER MODIFICATION FAQ recently posted
to this newsgroup.

You about four months late on this! On Mar5, the House Of Representatives voted 414-1 to PASS HR2369. It is expected to be up in the Senate soon, and is expected to receive absolutley NO opposition. You have your work cut out for you. BTW, all the bill does is say over again that modifiying radios for cellular, or listening to cellular is illegal, and adds that PCS is also illegal to monitor. Despite the change from "OR" to "AND" in "receive and divulge", after all our faxes, e-mails, and phone calls, Tauzin's office added specific exemptions. The bill could NOT be used to stop us from monitoring public safety or other analog two way radio. Check out http://www.popcomm.com for more info.

Hello from New Hampshire!

Skip is working well this morning. Have heard comms on many frequencies.

I've monitored the following: 42.06, 42.60, 42.12, and 42.38. Since 10 am. EST.

42.06: dispatcher(female) " '805' it just won't run??"; "put in neutral,

and won't start"; "we'll call someone and get back to you"; "10-4, 389" code used was 10-17; "(male dispatcher) "1154, do you copy?"; "805 on eastbound I-44"; possibly Lawrence County; "805, will ride in with Hilliard's, does not need assistance";

42.38: KAA203 call sign used; "subject has negative 29, out of Fairview Heights, Ill."

Other comms not very readable to get confirmation.
Happy listening!

P.S. still getting all these, and 42.56 at 12:25 EST.

No, this is not a gimmick. FREE! Filter out unwanted John Mackeys by filtering out his signature! He has never changed them (i think)! There are no strings attatched!

(this was meant to sound like a tv commercial, the subject influenced me to do that)

To me, this sounds like the Missouri Highway Patrol, operating on 42.06 and 42.12 MHz. There is a Lawrence County in Southwest Missouri, and I-44 runs from Springfield to St. Louis.

4002. ***FS: RS PRO-39 SCANNER (GAPLESS) W/ACCESSORIES***

Newsgroup: rec.radio.scanner
Date: 1998-06-28 00:00:00 UTC
From: teenham@aol.com
Message-ID: <1998062818232200.OAA03851@ladder01.news.aol.com>
Source record: 155114

Hello there...

I have for sale a Radio Shack PRO-39 portable scanner. Has 200 memory channels (well, it's actually 210 if you count the 10 monitor channels also,) Hyperscan mode (blazing 25 channels per second scanning and 50 steps per second searching rate.) The scanner covers the following frequency bands: 30-50, 50-54, 108-136.975, 137-144, 144-148, 148-174, 380-450, 470-512, and GAPLESS 806-960 MHz (with proper 30 kHz spacing in proper portions of the 800 MHz band, and normal 12.5 kHz spacing elsewhere.) (Mod was professionally done.) The scanner is in MINT condition (I hate to use the word "mint," but in this case, it truely DOES apply!!!) There are NO SCRATCHES anywhere on the scanner. Scanner comes with the following accessories: "Rubber Duck" type antenna, six Radio Shack Rechargeable AA NiCADs (1.25V, 650 mAh) catalog # 23-125, Radio Shack Home AC adapter/charger (9V DC 300mA output) catalog # 20-188, Radio Shack Mobile DC adapter/charger (Catalog # 270-1562.) Plus I have the original box, packaging, and manual. Date code 8A3. Made in Japan. $200 for everything. Willing to ship COD (cash only, no checks!) or postal money order. Thanks for reading.

4003. BC3000XLT BATTERY

Newsgroup: rec.radio.scanner
Date: 1998-06-28 00:00:00 UTC
From: GARY BURCHETT <gsburchett@cooke.net>
Message-ID: <01bda2c3$3aaa3e80$8860aacf@garyburchett>
Source record: 155115

Does anyone know a good(inexpensive) source for a replacement battery-pack
for the BC3000XLT. Uniden has decided to charge $52.95 for a replacement
pack.
A 'AA' pack would be nice also.

Any help is Appreciated.

Gary Burchett

4004. FS: Pro-46 handheld scanner with extended coverage

Newsgroup: rec.radio.scanner
Date: 1998-06-28 00:00:00 UTC
From: "Jack T.Dragon" <tdragonn@blarg.net>
Message-ID: <3596187E.48BF@blarg.net>
Source record: 155116
Cross-posted to: rec.radio.swap,alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Recieves on:
29- 54mhz FM
66- 88mhz FM (after keypad trick)
108-137mhz AM
137-174mhz FM
406-512mhz FM
806-956mhz FM (unblocked)

Has 100 memories in 10 banks. Runs off of 4 AA batteries.
Included are the AC adaptor / charger, and instruction manual.
The restoration trick involves soldering SMT components,
I've allready done that for you. Plus, you can undo the hardware
mod and then do the keypad mod. "Oops, sorry about resetting it
like that officer, but as you can see, this can't do cell..." :)

It works just fine and has no problems.

Asking $140, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I need the money more than I need the
hobby.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

Bill,

FHP, along with most other state law enforcement agencies (marine patrol, etc.) have switched to an all-digital Motorola Astro system from Brevard County south, and west to Orlando. (The switchover isn't quite complete, but should be within a few weeks.)
Anyway, since it's a digital system all you'll hear if you try to monitor the frequencies is a digital data stream. Not having heard it myself yet I don't know if it sounds like static hiss, ala DVP encryption, or like a fax machine or modem. In any even, you're not going to hear any normal voice. Sorry I don't have better news.

We have just had a new 911 system emerge in my area. The Chattooga County Georgia 911, has now taken over dispatch for all emergency services in Chattooga County. Among these is the Chattooga County Ambulance Service. They have started using Dispatch Signals instead of plain english. Does anyone know what these Chattooga County Ambulance Dispatch Signals are? or have any lists of Ambulance Dispatch signals that might be used generic1y? The only other signals I could find from agencies in the area are obviously not the same because today they dispatched a Signal 10 for a 60 y/o female and the only list of Signals I could find has a Signal 10 as a female in labor.

JT and the Gang,

The Switch Over is about 99% Complete here as per FHP Comm Center

FHP Orlando
FHP Brevard
FHP Deland
FHP Turnpike

Are Now on the System and have been Advised that their VHF Radios are 10-7
(Out of service).

FHP Has Moved their Comm Center in Orlando to a New location on HWY 436
(Semoran BLVD) and the Old VHF Equipment is not there

Trunker WILL Monitor the System But ID'ing the Talkgroups is a pain

Hope This Helps,
Jason

Here is how the 900 MHz cordless frequencies are arranged you'll need to fill in the channels from 4-37 just remember they are all equally-spaced at 128 kHz intervals:

Channel 1 2 3.....
38 39 40
Tx frequency (MHz) 902.144 902.272 902.400.....906.880
907.008 907.136
Rx frequency (MHz) 922.880 923.008 923.136.....927.616
927.744 927.872

Message-ID: <1998062922390600.SAA19855@ladder03.news.aol.com>
Source record: 154729

While powering up my trusty 200XLT, it gave a "snap" or
small "pop" and went dead. The only functioning portion is the display... it
scans 200 channels endlessly (correct frequencies) but never captures
one...zero audio output with squelch and volume completely inoperative through
the internal speaker or earphone.

The dial light doesn't function either.

Anyone know of any likely component culprits?
Short of that, how about a reputable repair facility? It's been a great radio
since 1991, and I'd hate to scrap it now.

Thanks in advance,

Apple2000@aol.com

Some of the older phones use a dip switch to set a unique code in the handset that matches that in the base, these are similar to those used in garage door openers. The newer 900 MHz phones receive the handset initilization code when placed in the base charger/cradle. So you should be able to use a similar Mfg. phone if you can confirm that they use dip switches. It's worth a try if you can find a used one at a swap meet or a garage sale for a good price.

The good news is, quite frankly, the future. Demand is building for a
digital trunktracker, we just have to keep bugging Uniden or some
other scanner manufacturer. We've conquered analog trunking (motorola
anyways), and it's stupid to think consumers won't be able to monitor
this technology in the not too distant future, as long as it is a
public digital system, not IDEN, it is lawful to monitor (depending
upon what state you might live in, of course :)

Yes i have the same problem.The q201 transitor let go because of a shorted capacitor.
I will send you a file that i recieved from Bob Parness.You might have seen his postings on fixing Bearcat scanners

Good luck
Robert

Hello!

Ive been Dxing the lowband for a while but havnt had much success.How do
you
look for an opening? I have only heard skip twice this year.I have a
nice
random wire outside so I know its not the antenna.And what are the best
times
to do this?

I only scan 2 banks of lowband. These are ones from scanner book with my BC3000xlt. I just put them in for the various states. I had heard some of these last summer too.

We've also had quite a few storms, which may effect the listening.

Yo! Loony Boy! Common sense checking in with a little tidbit for ya:
Stick with the "experiments" for "the good of all people someday" bit.
You'll get a little more mileage out of that lie.

This lie here:

>WRONG! I am attempting to prevent receiving advertising SPAM!

Is a real boner. Once you change your header to an Invalid ID, people
can't reply to your posted address. Duh. Exchanging one invalid ID for
another invalid ID is pointless. Duh.

You see what I mean? This one sucks. You gotta go back to the other
lie. You know, that "Mackey the Scientist" bit. I always liked that one.

G'waaaaan: You *know* you want to tell it.

you friggin' loon.

Source record: 154744

One Reason why the cordless phones on the same freq never hear each other because all and most of the older cordless phones have auto scanning of the frequencies. In other words my phone is on two and so is my neighbors. I want to use mine and my neighbor's phone is in use. when I push the talk button on the phone is automatically changes the freq to a clear channel. I even tried doing it manually but it wouldn't work. Not that I listen to cordless phones on my scanner but my neighbor was on channel 3. I picked up my phone and pushed the channel button on the phone to change it. It would not go to channel 3 it just skipped over that, On some of the older cordless phones there is interference. And of course one phone doesn't ring the other and can't dial out because each different phone and phone manufactor has different security codes.

Best Regards,
Steve Goeller

No you don't. You walk into the college library or computer center and sit your butt down in front of an empty terminal. I'm a professional student. I've been taking one night class a semester since the dawn of time. Hell, the the computer labs have "open hours" where the only scrutiny you receive is a clipboard by the door where you write down your name and class.

> I deny your accusation
> above & you can prove this by simply calling the colleges in question

Staff or Student? Of course not, I'd start in the janitorial and maintenance departments.

mmmmm I dunno. I'm pretty consistent. It's obvious I'm here for amusement and you're about those most amusing loon I've ever encountered. You know: I was reading your posts where you were getting taken apart on your techno-babble. I couldn't get in on that session of "Whack the Mackey". Not my area of expertise. I have to wait 'til those guys get done with ya and you wander back down here to Stupidsville so's I can get a whack at ya.

But ya know: You made a valiant effort to try to sound academic up there in Tech Town (I mean, if you put aside that "Not knowing what you're talking about" thingy).

I would read those posts and think "Wow, this guy *almost* sounds normal." But something still wasn't quite right. It's that "arrogant prick" tone. I swear to God, it was there as clear as day in middle of all that.....technical stuff. You must be plagued with that. I dunno how to get that "arrogant prick" tone out of your writing. I'll be it even comes through on your

Christmas cards.

So I dunno: You've got this despicable presence on the USENET, but deep down inside: you're just an arrogant prick.

I feel like I exerted myself opening and extremely ugly package only to find a "real-life" turd.

you friggin' loon.

Its a real funny thing, John,
You are responsible for some of the forging that goes on here (regardless of whether you did it personally or not). The logic behind this is simple: You goad others into doing your dirty work for you (or against you). Your actions and statements in group are designed (by intent or otherwise) to piss people off.

So, when you go away, so will most of the problems.

Hawke

I was wondering, does anyone have any experience finding bugging freqs, and if so, are there some specific frequencies (not ranges) that have proved consistently successful? Please do not refer me to any web pages, as I have seen them all, and they are mostly filled with ranges to search (and one has a list of wireless mic freqs, not exactly what I am looking for). I do not have time to search ranges, I just wanted 50 or so freqs to plug in (if possible). Maybe I'm wrong on all of this, and maybe there are no set freqs per se, but if there are, I'd appreciate any help I can get. Thanks in advance to any responses.

Yea right, I have a credibility problem!!!!! THAT IS A LAUGH!!

Anyone can review dejanews & see where myself & others were
aking Bill Cheek (bcheek@ssan.rr.com) to stop, we even offered
his various truce options but he denied all of them. Anyone who wants
to see for themselves can go the "rec.radio.scanner" right now
& see the proof! Bill Cheek & his gang of thugs are harrassing that
entire NG & raising hell!

> you can only hear the one closet to you.

Let's say I'm listening to one coversation, and all of a sudden, it cuts out and I hear my other neighbor making a phone call. The neighbor who just made the call is all you hear now (the two signals haven't mixed), and just by hearing the conversation, I can tell they aren't bothered by any other cross-talk from any other phones). From previous posts, I learned that since each person is closer to their base, then they'll only pick up their own base and not anyone elses who is potentially further away. That made sense.

As another test, I had a strong siganl from a neighbor on Channel 3. I picked up my own Sony 10 channel cordless (about 4 years old) and I kept hitting channel and it actually landed on Channel 3! However, I couldn't hear anyone other than my own dial tone. My scanner also immediately picked up my phone (because I was so close to my phone and scanner at the same time) and I couldn't hear any cross talk.

I'm actually gonna try a new test tomorow. I'm gonna take the handset to my cordless phone on the road and see if my phone will work with other bases. I really don't think it'll work, but I'll give it a shot anyways.

Thanks to everyone for their responses - Howard

This to let you know that John Mackey is telling you a tall tale when he states Bill Cheek is the flamer of the newsgroup, John has been flaming the rec.radio.scanner newsgroup for three years now.
What is going is a personal vendetta by John Mackey against Bill Cheek , this all started when John Mackey was kicked off a fido net scanner group.
Then one day 3 years ago John found Bill on the internet and has done his best to try and destroy Bill.
He has even gone as far as making accusations that Bill had a warrant out for his arrest for deviant behavior , when John was asked to prove this he was not able to.
Also John was shown the door by sprint as they caught him forging post and making rouge cancels.
Something he neglected to tell you and something he is going to deny to his dying days .
So when little Johnny boy cries wolf just ignore him , also the majority of the forged post and rouge cancels are from community colleges in Portland Oregon, another item he neglected to mention since he lives within driving distance.
So as you can see John is not the innocent victim he wants you to beleive and is just trying to rally support for himself that he can't get on the rec.radio.scanner newsgroup.

Below is only a partial grouping of his flame war post from a search on dejanews.

4045. REPOST: Re: Persistant flamer, what to do?

Newsgroup: rec.radio.scanner
Date: 1998-06-29 00:00:00 UTC
From: dmi853@swbell.net
Message-ID: <REPOST-20479.375.35978E78.32CA9DE@swbell.net>
Source record: 154757
Cross-posted to: news.admin.net-abuse.usenet,rec.radio.scanner

This to let you know that John Mackey is telling you a tall tale when he states Bill Cheek is the flamer of the newsgroup, John has been flaming the rec.radio.scanner newsgroup for three years now.
What is going is a personal vendetta by John Mackey against Bill Cheek , this all started when John Mackey was kicked off a fido net scanner group.
Then one day 3 years ago John found Bill on the internet and has done his best to try and destroy Bill.
He has even gone as far as making accusations that Bill had a warrant out for his arrest for deviant behavior , when John was asked to prove this he was not able to.
Also John was shown the door by sprint as they caught him forging post and making rouge cancels.
Something he neglected to tell you and something he is going to deny to his dying days .
So when little Johnny boy cries wolf just ignore him , also the majority of the forged post and rouge cancels are from community colleges in Portland Oregon, another item he neglected to mention since he lives within driving distance.
So as you can see John is not the innocent victim he wants you to beleive and is just trying to rally support for himself that he can't get on the rec.radio.scanner newsgroup.

Below is only a partial grouping of his flame war post from a search on dejanews.

Yeah, I figgered you went fishing or something,
and heck, it was EASY to answer the questions
on your behalf. I thought expediency to be
more important, what with his attention span
about as short as his whatchamacallit.

> The longer I read this NG, the dumber Mackey gets.

Well, you know how stuff can be injected into
a municipal water supply to dose up a population?
Well, I developed a special "dumb pill" that I
injected here into the newsgroup....with ol'
Smacksie's DNA....so it is very specific and
affects only him and members of his immediate family.

But yes, Smacksie is being dumbed down, in a
manner of speaking.

> What a waste of a good human body.

I'm glad you didn't say "mind". The boys
around the lab here refer to him as......
"The Mindless One".

Well, I dunno......I saw some monstrous
clappes that came out of Southeast Asia
in the early 70's.....those pretty near
required a bit of a "charge" to clear the
waterways, in a manner of speaking.

You could tell easy enough when the feller
ahead of you at the urinals let out a
shriek and left fingerprints permanently
etched into the chrome plated plumbing.

Hello from a radio operator of the signals you received on 42MHz.
I work for the Missouri State Highway Patrol in Rolla MO.
Here is some info of our operating frequencies and stations:

There are 9 troops throughout the state with 9 base stations operating on
330ft towers
at 1500w at their primary location and approx 8 base stations operating at
a remote location on shorter towers usually at 300w. I'll try to put it in
a table:

Troop A Lees Summit (Kansas City) 42.38MHz 1500w 42.06MHz 300w both
KAA202
Troop B Macon (Northeast) 42.06MHz 1500w
KAA201
Troop C Kirkwood (St Louis) 42.38MHz 1500w 42.06MHz 300w both
KAA203
Troop D Springfield (Southwest) 42.06MHz 1500w 42.12 and 42.58 300w all
KAA243
Troop E PoplarBluff (Southeast) 42.06MHz 1500w 42.12 300w both
KAA270
Troop F JeffersonCity (Central) 42.12MHz 1500w
KAB302
Troop G Willow Springs (South) 42.38MHz 1500w and a 300w remote both
KAA522
Troop H StJoseph (Northwest) 42.58MHz 1500w and a 300w remote both
KAA204
Troop I Rolla (SouthCentral) 42.58MHz 1500w
KAA958

The cars calling in are on another frequency but the cars talk to each
other on the
base frequency. With skip, sometimes you will hear the cars over the base
even though
the cars are 100w. I'd be interested to receive reports of which troops
"cover"
the others consistantly while you are listening. Our base stations alway
use a
four bay, folded dipole array but some are arranged differently than
others.
Ours in Rolla is omnidirectional. That is, our four legged tower has a bay
on
each leg, one below the other starting at the top, but the one in Kansas
City are
all on the east leg...

If you would like more info I'll try to help.

Correct!

> Another tidbit: I accuse you of slinking into community colleges and
> libraries in the Portland, Oregon area and issuing Bill Cheek forgeries
> and rogue cancels of Bill Cheek's posts from unattended terminals at
> those locations.

I have not seen any list of libraries in those posts you mention,
only colleges. When using computers at colleges you must prove
enrollment as a student or faculty member. I deny your accusation
above & you can prove this by simply calling the colleges in question
& asking if I am on their roster as staff or student.

I accuse YOU of taking actions to attempt to start or further a flame
war on this NG. Your excuses of your actions are things you either
know, or should know, better of.

> Just so we're clear. I believe you bear responsibility for those
> shenanigans. I don't care what your current lie is.

Then make the necessary calls I mention above & either prove your
statement or drop it as un-supported & un-based accusations. (In other
words, PUT UP OR SHUT UP!) If indeed *I* am doing the posts you accuse
from a local college then you should have no problem getting access cut!

Sounds like you want this one:

RADIO SHACK
DIXIE VALUE MALL
1250 SOUTH SERVICE ROAD
MISSISSAUGA, ON
L5E 1V4

905-271-2160

The mall is on the southwest corner of the QEW and Dixie Rd.

IIRC, the store is in the east end of the mall.

PL circuitry controls receiver squelch. Cordless phones don't
need squelch circuitry. Try removing power from the base in the
middle of a call and see if the handset squelches. Besides, what
good are PL tones when the receivers would be unsquelched for the
duration of a call anyway?

It is quite simple to do. I installed Netscape 1.1N and
Netscape 3.0 on an old 386 running Windows 3.1 in order
to test web pages on older browsers.

I encountered no problems. Was quite easly to do.

I have to come clean on something.

I primarily cruise this NG for scanner and radio info. But also, to be completely honest, I must admit that I flat-out LOVE reading all the flame wars!!!

Few things make me laugh so much! I get some good ideas for insults and jokes, I love the personal rivalries, and I am always especially amused at those who take it all so seriously.

Maybe I'm just a nut, but- I love it! I'm serious! Don't stop (but don't take each other too seriously, either!).

Always smiling- Alan

As you can see John is trying to get another newsgroup involved in his vendetta.

We are having a problems with a user under the ID of bcheek@san.rr.com on the NG of rec.radio.scanner. This guy should get a trophy for causing trouble! He is constantly flaming & causing trouble & making bogus posts under fake id's.

Any suggestions of how to deal with him?

thanks!

This to let you know that John Mackey is telling you a tall tale when he states Bill Cheek is the flamer of the newsgroup, John has been flaming the rec.radio.scanner newsgroup for three years now.
What is going is a personal vendetta by John Mackey against Bill Cheek , this all started when John Mackey was kicked off a fido net scanner group.
Then one day 3 years ago John found Bill on the internet and has done his best to try and destroy Bill.
He has even gone as far as making accusations that Bill had a warrant out for his arrest for deviant behavior , when John was asked to prove this he was not able to.
Also John was shown the door by sprint as they caught him forging post and making rouge cancels.
Something he neglected to tell you and something he is going to deny to his dying days .
So when little Johnny boy cries wolf just ignore him , also the majority of the forged post and rouge cancels are from community colleges in Portland Oregon, another item he neglected to mention since he lives within driving distance.
So as you can see John is not the innocent victim he wants you to beleive and is just trying to rally support for himself that he can't get on the rec.radio.scanner newsgroup.

Below is only a partial grouping of his flame war post from a search on dejanews.

finally tried this... it works exactly as I had hoped..!!...
I bought the (overpriced) gizmo at Radio Shack for $13... it worked
SO well, that I had to attenuate the signal 60 db. just to eliminate
all neighborhood phones... but this is now the only signal strong
enough to pass to the scanner, and it is still strong enough to
provide clear reception. For low-band VHF scanning... these things
appear to work *VERY* well.

thankx to everybody that provided tips.... Rob

That is not the reason I change my signature. I only change it because I want to. If I am in your killfile, I don't know why. I've vowed to no more trying to stop the flaming (I don't like it), and flaming itself (yes, I've flamed a few times), and I apologize for it.

I didn't even know it is possible for a killfile to go by the signature, but now I do!

Just as a point of interest, the first scanner I ever used was one of those Tennelec binary coded things. The day it came, we fired it up. The only frequency I knew was 42.06, so we punched in that one. From Urbana, Missouri using just the supplied wire whip antenna, we could hear Troop A base and cars. Later on I heard some utility company in New England. I sent them a prepared QSL card with return postage, but never heard back from them.

The Germans have a word for it. It's "delicious pain" or something like
that, though I don't know the German word. It's used to describe something
that is horribly painful, but you keep doing it anyway. Sort of like putting
your tongue to a 9V battery or smelling a carton of sour milk.

The Germans also have a wonderful, very long word that means "Sunday
afternoon stroll" but I don't know that one either.

But then there is "schiest und hingefallen" which I DO know.

Bill, Bill.

You know I love you.

I have all of your scanner books and I subscribed to the scanner newsletter (until it got really deep into the computer aspect, and I'm all thumbs with a soldiering iron), and even got a whole bunch of back copies of EMTJ, although under a different name. Yes, either D.P. Roberts or the name I used is not quite the real thing.

But are you really fanning this thing with such a simple question? Or maybe there is something deeper, something that has to do with the Slick Willy and Hillary Rodman three dollar bills I've seen floating around.

Yes, Mackaroooooon is just as blustery as Slick Willy. They both talk a good game, but their words are empty. Both as windy as a sack full of farts.

>to do this?

This is kind of unscientific, and a lot of people are going to laugh, but I look for a bright, warm, blustery day. Not just breezy, but blustery. A front may be moving in, and with it, some skip. I sat in the kitchen one day when it was so windy I thought the tree was going to break through the window. I don't have an external antenna, but instead use the $19 K Mart wabbit ears, extended all the way out and held so they're vertical. I heard about 50 skip stations and 3 or 4 second images from 15 MHz shortwave broadcast stations.

A few months ago, from Kansas City, using just my portable TV with its whip, I was able to log EVERY television station from Springfield, Missouri, maybe 90 miles away. Not just log them, but sit and watch them. They were all crystal clear, studio quality, even up into the UHF channels. Unfortunately, I didn't have the presence of mind to try the FM band or scanner frequencies. In fact, I just now realized I could have probably heard something.

I've heard that a good barometer is to watch your TV on channel 2, 3 or 4. When you start seeing those fuzzy lines forming, and it's a local station, skip will start coming in. Often the news anchors will mention that their signal is looking strange. When that happens, start looking for skip. I was once able to log 60 television stations in one day, including three on channel 13 from New York state.

Unfortunately, if you don't have an outdoor antenna, that sort of skip becomes somewhat infrequent. There is one scanner listener who writes magazine articles who has a tower with multiple antennas, and he gets that sort of reception quite frequently.

Regarding the "Dennesy" county, I am unable to locate anything like that. There are a few hits, but they don't seem to fit. There is a "Geneseo" in Kansas, which is about 15-20 miles south of I-70 (which you heard mentioned), kind of in the middle in a triangle formed by Salina, Hutchinson and Great Bend. It's just south of Kanopolis Lake.

I've been looking for a list of counties by state. I'm sure some amateur radio page has such a list, and maybe I've got one in a DOS text file stored somewhere, but you'd think something like that would be easy to find. I've about struck out.

Thanks for the answers. However, when I had damaged my handset for my cordless phone, Sony told me that I had to purchase a new phone with the base. They told me a replacement handset would not work with my base, but the salesperson couldn't give me a reason why.

If they are all on the same frequency, why wouldn't another Sony's handset work with my base?

John, I sold my AR8000 early this year and bought a PCR-1000. And I
have
owned a 2006 a few years ago so maybe I can be of some help.

The PCR-1000 is a neat package. Its perfect for me as I seldom ever
took
the AR8000 out of my office. I am a programmer and although I had
purchased
the RS232 interface module for the AR8000, I never really did much
with it.

The greatest appeal to me of the PCR-1000 has also been the source of
greatest
disappointment. I wanted a radio intended purely for "program
control" and the
PCR-1000 appeared to satisfy that requirement totally. I bought it
with the idea I
could write some software of my own to "do it my way" so to speak.
Its just a hobby
with me but I figured I could put my programming skills to work and
blend a couple
of activities I take great pleasure in.

Ahhhh, but I had not counted on Icom to throw a monkey wrench into the
mix. Turns out
they ABSOLUTELY REFUSE to release ANY documentation on how to control
the radio
via software. Not to be deterred, I surfed the internet, and sure
enough, I found software
from third party vendors which stated support for the PCR-1000. I
bought one and downloaded
another neat package (PCRScope) which seemed to work well. And I
found some "unofficial"
documentation on the command protocol for the radio. The sky began to
lighten up and I

thought maybe I could "do my own thing" with this radio after all.

But alas, Icom threw another wrench into the pot. My radio got sick. Turns out there is an
EEPROM (only 128 bytes) in the radio which got corrupted somehow. I don't know what did
it or exactly when. It did not disable the radio totally, just made the AFC inoperable, and caused
the received signal to appear to be quite attenuated. At first I attributed this attenatuion to a
change in my outdoor antenna or something.... BUT NO!!!! I read on this use net group
where others had experienced EXACTLY THE SAME SYMPTOMS I had. So I sent my radio
back to Icom for repair. They did repair it, and I am grateful for that.

BUT! (There's always a BUT ain't there?). Icom indicated in their correspondence with me that
they think my EEPROM corruption occurred because I was using software other than that supplied
with the radio (a fact I admited up front when I reported the problem to them in the first place). Now
they say they are going to treat any future EEPROM corruption as non-warranty because in their
opinion, it only occurs when someone uses software not supplied by Icom. So in effect they are
saying that I am S.O.L. when it comes to wanting to write my own software. I'm a bit PO'd about
this as you might imagine. My radio has been returned (got it last week) and it works great. But,
I'm unable to use the software I bought ($150 worth) and it bugs the hell out of me...

The tech said he spent 4 hours on the test bench "realligning" my radio. Said all the settings that
were saved in the EEPROM had been cleared by something - most likely third party software.
I know for fact that many others have used third party software w/o suffering this fate. So I guess
its "let the buyer beware!" as far as Icom is concerned. Even more aggregious is the fact that
Icom puts links to "third party software developers" (including the one I bought from) on their web
site. Yet after you buy a PCR-1000 you will learn that THEY PROHIBIT YOU from using such
software if you wish to maintain warranty on your equipment. Seems like they're trying to have it
both ways - Put on a show of third party support for the radio, and yet will not support your use of
it if anything goes wrong with the radio hardware itself.

From the various posts and what little I have been able to learn, it appears a big part of the problem
is related to the fact that Icom failed to provide any sort of "write protection" for the EEPROM in the
radio. Thus, if the data comm gets off-track in any way, it "might" inadvertently interpret a command
as a write command to the EEPROM data. The EEPROM in use is a Xicor X24C01A, which is a
serial programmable EEPROM.

The fix needed is for Icom to be forthcoming in releasing ALL the command protocols for the radio
so that third party developers and DIY people like me can do it RIGHT! And they also ought to
write and release a BACKUP/RESTORE utility to allow users to save the precious alignment contents
of the EEPROM and be able to restore it if things do get corrupted. So far, Icom has been absolutely
silent to requests for such a utility.

So, "Caveat Empteur" and enjoy the PCR-1000 if thats the route you go. As I said, I like the radio.
Reception in HF,VHF and UHF is great. Probably better than either the AR8000 or Pro2006 was. But
if you intend to write software for it or use one of the nice third party packages, then forget this radio. Or
better yet, call Icom and complain about this policy - maybe they will listen better to a "prospective" buyer
than they do to people who's money they've already pocketed.

John

Nope. Not even close.

> Are you wishing or showing your lack of putur knowledge agin ?

Are you calling me a liar? And if so,
how fat of a wallet would you like to
wager on the truth and facts of what
I said above?

Money talks and bullshit walks, fella.
Let's see what you are made out of?

Let's put it this way....I might be able to
give you a slick little computer lesson that
will remain with you for the rest of your
life. So how much hair and lugnuts do you
have to put up to finding out?

I'll be eagerly waiting for your reply.
(On my 10-Mbps 24/7/365 Internet connection.)

Fair enough?

Your neighbors might not have sony phones. Just because they use the same frequency doesn't mean they are the same brand much less model. As far as replacing your handset, maybe some sony phones vary slightly, or maybe he would like to see you purchase a new phone. And some digital phones use codes to authenticate between base and handset. Maybe yours would not authenticate with a new handset.

I'm probably wrong though, in which case I'm sure someone will happily correct me :).

ICOM IC-R7100A

If I recall, I tapped into the junction of R228 and R230.
R228 and R230 are located next to each other
on the "Main" printed ckt board, next to crystal discriminator X3.

I used RG174/U miniature coax cable to connect
the junction of the resistors to an RCA jack added
on the rear apron.

Consider buying an R7100A service manual from ICOM.
The current price is about $46 plus s&h. It contains
a wealth of info, including board layouts, theory, etc.

Good luck and happy monitoring.

No George. Look at the posts, the "path" statement shows which
server was used to post the messages. The "nntp posting host"
shows the IP address of the computer making the post.

Try it!

> There is *nothing* in the path header or NNTP-Posting Host header that
> in any way indicates Bill was responsible. Again, it neither *proves*
> nor *disproves* that Bill did it.

Ok, sometimes that happens. Then you would also have to say that there
is no indication that proves or dis-proves I made the posts!

So we could only go on previous record & history. Remember
the "Billy Thunder" & the "WinRadio" posts Bill Cheek was
caught making on this NG only a few months ago? Proof positive!

Get an old Motorola Brick Phone the 8000's they have a few jumpers on the back of the phone up by where the antenna connects on and the two far right connectors need to be jumped this will allow the phone to scan, this however is illegal and sucks down the batteries very quickly. I'll look up the specs and try to post all the particulars but as always be careful. I may have other phones listed somewhere. There is also a digital 8000's that very few people know about that I have the spec's on, this allows for some scanning on digital lines but only on some of the old digital phones, not that great if you ask me.

Two possibilities. Either or both phones could have some sort of "PL" tones, such that only the matching base and handset will receive/relay that phone's transmissions.

Also, you'd probably have to assume that even if YOUR reception of both is about the same, each of the two users is probably closer to his OWN base; therefore the other user's phone's signals would be weaker.

In other words, one user may be three houses WEST of you, the other three houses EAST of you. They're equal distance from YOU, but 7 houses apart from EACH OTHER, and may not even notice any interference from each other.

Make sense?

First don't try to program your radios in anything but dos, and don't try running the programming software from windows 95 or 98. Only run them in dos, this will allow for problem free programming. You can program using 95 and 98 but it's a hassle to configure. Enjoy and happy programming

Can anyone help me, during replacement of the Ni-Cad battery pack, on my UBC220XLT (1994/95) UK Version. I managed to cause a short (due to worn wiring), which burnt out the negative power track on the main circuit board. I found a way of remedying this buy achieving a new negative connection via the case earth plate (attached to the lower right screw). This makes the scanner operate in all modes.

Whilst this works, the scanner will now only operate for 15 seconds at a time before prematurely activating the low battery warning and triggering the low battery power cut off! I have a feeling I have 'fried' the voltage regulator on the underside of the main board, as it has 'bulged' somewhat.

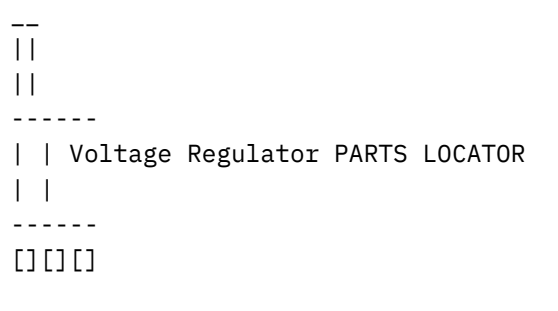
Therefore as the unit is well out of guarantee period, I would like to modify it by bypassing the low battery power warning/cut-off completely so that the scanner will operate continuously until the battery pack is totally exhausted. I have obtained the following article outlining this procedure for the UBC200XLT but it does not relate well to the UBC220XLT circuity, does anyone have this MOD for the UBC220XLT, or can offer some relevant advice.

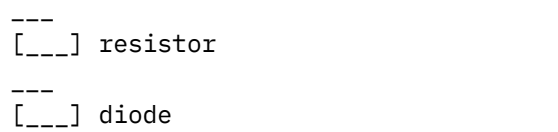
=-=-=-

At the bottom of the remaining board--to the left of the speaker magnet--are two blue electrolytic capacitors; just above them are two striped components-- one resistor and one diode. Using the soldering iron and braid, carefully remove the two components without overheating the board or damaging the copper traces.

When you reassemble the radio, be very careful to note the insertion of the front panel into the slot at the base of the volume/squelch panel. Be especially careful to align the screw holes perfectly, allowing the two rows of fine pin contacts to mate correctly with the socket. If this is not done correctly (and it probably won't be the first time!) no damage will occur, but the scanner display will be blank.

Recharge your batteries after 6-8 hours of heavy use. If the scanner dies, recharge it as soon as possible to prevent loss of your memorized frequencies.





capacitors (2, round) Speaker Magnet

John,
the more you deny, the more poepl will tend not to believe you (past actions and all that).. The only way people are going to believe you is if you can show irrefutable proof of your innocence that can be verified and checked out by any (or all) interested parties.

However, since you seem to hell bent to harrass others in here, I seriously doubt that anyone will be giving you any credibility anytime soon.

The scanner will "think" you've got one antenna, so you may want to try an antenna switch.

What happens if you directly connect two antennas? It is somewhat like two pools of mercury (or water) - if you stick 'em together, they just come out to be one object.

One vertical antenna tuned for ~460 MHz and another tuned for ~160MHz connected together will work better on the 60-80MHz range (just above 6m amateur radio band).

Hi,

Just got a BC235XLT, works great, sometimes get a lot of static - can anyone tell me what a good antenna would be to put on this radio, so I can hear everytihg as clearly as possible - or any other ideas how to improve clear reception?

Thanks!!

You're as big a dope as the vile piece of shit that you're flaming. Your
web site proves it. I'm still having trouble reconciling the fact that you
can make a scanner masturbate you housepets but you can't build a web site
that's worth a shit. I struggle with people who can be somewhat intelligent
in one area yet show their complete lack of how you might reuse the same
concepts in other areas. My two year old understands hierarchical
organization and bandwidth concepts better than you. You only serve to make
yourself look very stupid when it's clear you are not that bright yourself.

Maybe to you, but you would be the fool here. Maybe everyone should start calling you a liar for no reason?

There's no comments of yours to snip. They have no content, no meaning, no intelligence whatsoever. Why do you even exist? Don't you know that you are pathetic? I'll bet you couldn't pour piss out of a boot if the instructions
were on the heel. You are a canker. A sore that won't go away. I feel debased
just for knowing you exist. I despise everything about you. You are a newbie twit protohominid chromosomally aberrant caricature of a coprophagous cloacal parasitic pond scum. And I wish you would go away.

I will never get over the embarrassment of belonging to the same species as you. You are a monster, an ogre, a malformation. I barf at the very thought of you. You have all the appeal of a paper cut. Lepers avoid you. You are vile, worthless, less than nothing. You are a weed, a fungus, a ferment, the dregs of this earth. And did I mention you smell?

If you aren't an idiot, you made a world-class effort at simulating one. Try to edit your writing of unnecessary material before attempting to impress us with your insights. The evidence that you are a nincompoop will still be available to readers, but they will be able to access it more rapidly.

You snail-skulled little twit. Would that a hawk pick you up, drive its beak into your brain, and upon finding it rancid set you loose to fly briefly before spattering the ocean rocks with the frothy pink shame of your ignoble blood. May you choke on the queasy, convulsing nausea of your own trite, foolish beliefs.

And what meaning do you expect your delusional self-important statements of unknowing, inexperienced opinion to have with us? What fantasy do you hold that you would believe that your tiny-fisted tantrums would have more weight than that of a leprous desert rat, spinning rabidly in a circle, waiting for the bite of the snake?

You are a waste of flesh. You have no rhythm. You are ridiculous and obnoxious. You are the moral equivalent of a leech. You are a living emptiness, a meaningless void. You are sour and senile. You are a disease, you puerile one-handed slack-jawed drooling meat slapper.

Your writing has to be a troll. Nothing in our universe can really be this stupid.

Perhaps this is some primordial fragment from the original big bang of stupid. Some pure essence of a stupid so uncontaminated by anything else as to be beyond the laws of physics that we know.

Stick your head in your floppy drive and type "Format a:".
Your intelligence is a Kronecker delta function which spikes at the value "moron". Go down to the glue factory, where they dispose of old horses, and volunteer to be disposed of.

Did I mention you have no grasp of grammar or spelling?

>>> You knock AOL so much

<Stupid stuff snipped>

AOL isn't an ISP, either. They don't even have POP3 or SMTP.

>Uh, yea they are, moron. I'm not even going to debate that assinine comment

I'm not complaining... READ:

- I posted to this group long before you had probably heard of the Internet. I have only revisited recently. Like it or not you are a newbie, my friend. And not a very bright one. Simply put, I was here first. And I'm sure you're right that it will be like this for a long time to come. The statistics would support that since most of the world is just not that bright, steeped in low IQ.

- I'm not trying to get anyone to stop, I could give a fuck less. I told you how to make people stop in a previous post. I am simply suggesting that you and your friends lack much wit, so it's no longer funny. You wouldn't call it complaining if I weren't lumping you in with the rest of the losers like cheek and mackey.

You, and especially the dumbshit who can't seem to build a web site and spring for anything other than an antiquated compuserve account and an ip number, are simply not that bright.

These posts are only funny to people who need things to be explained to them over and over and that's all I was pointing out. Simply put, you are all a bunch of relative newbies to the web and Usenet and you try and play it as though you are old hats at this game. Monkey see, monkey do. One flings their shit, and the rest follow suit.

And Browneye? Carlin did that years ago.

Mayhaps the great bill should consider hiring someone to overhaul his scatterbrained no-creative-or-organizational talent website. Anyone who puts a business on the web looking like this can't possibly know much about the Internet in general. Somebody said he originally came from fido net. That pretty much explains it.

And you are whom? God of the internet I suppose? Interestingly enough, I
noticed that you popped in here to talk, not about scanners, but about
flames and bullshit like the rest of us "monkeys". Am I the only one

sensing some hypocrisy here?

>
> And Browneye? Carlin did that years ago.
So the hell what? Why do you care? Did I somehow bruise that obviously meglomaniacal ego of yours? Do you honestly think us "monkeys" give two triangular turds about another "monkey" who can come to terms with the fact that he is a "monkey" too? Nobody asked you for your two friggin' cents and yet here you are! That in itself makes you more like Mackey than anyone else! Can I get an amen?!

-Phil

P.S. Yes, you too are friggin' loon. Thank you and goodnight.

200xlt scanners are 200Ch Handhelds with 800Mhz coverage. Some made
before the ban have cellular coverage and some of the others can be
modified (for those that care).

Hey Brad McConahay, N8QQ is that you ?

4197. Alkaline battery recharger.

Newsgroup: rec.radio.scanner
Date: 1998-06-30 00:00:00 UTC
From: "S.M." <sal1969@hotmail.com>
Message-ID: <35997D6B.77CE1F94@hotmail.com>
Source record: 154495

A few years ago I saw a late night infomercial about a battery charger designed to recharge regular alkaline batteries. It was invented by an electrical engineering university professor from a school in eastern Canada. The product I saw on TV is different from the "Pure Energy Envirocharger" alkaline battery charger made by Eveready for their expensive rechargeable alkaline batteries in that you can use any duracell or energizer 1.5 or 9 volt. Since my PRO-46 chews up batteries

pretty quickly and I am not happy with the charge life of Nickel Cadmium

batteries, I would like to buy the external charger designed for regular

alkaline batteries. Does anyone know if it still available? How about a used one? Does it live up to its claims of recharging regular alkalines?

My paranoid, conspiracy minded nature tells me that Eveready probably bought the original patents, modified them to only recharge their special alkaline batteries, renamed the product the envirocharger, all in order to keep their sales of regular alkaline's high. Any chance that my suspicions are correct?

No, everything anyone does can be construed as hypocrisy in one sense or another. You just happen to be following the group of monkeys that uses an excuse to pick on one single mackey monkey who seems to be weaker and more stupid than the rest of the pack. Like the big fat loser everyone knew in high school who couldn't assimilate by any other means than joining the crowd who torments the runt. And the runt takes it because it's a way to get attention. Pathetic. And have I become a part of this pathetic situation? If by pointing out the true nature of the situation I have become a part of it, then so be it. It doesn't really matter.

The Cap'n

My experience with RadioShack repair and the Pro-43 is that they used to ignore the modification and go ahead and fix the problem it was sent in for. However, the federal government has been monitoring the practices of RadioShack as they relate to scanners and now the repair centers WILL restore the radio back to its original specifications. The place that modified my scanner said that if RadioShack "fixed" their mod, that they would modify it again for free. However, that was about 4 or 5 years ago and I don't think that company is still doing cellular mods on scanners anymore. Fortunately my scanner still works great.
Good Luck.

No, I don't have a problem with it. I have a problem with you, coming in here, acting all high and mighty, Mr. "I've been on the internet before you even knew what it was", sitting up in your ivory tower pointing fingers and naming names, when you are just as guilty of flinging the shit as all the people you so arrogantly referred to as monkeys.

You are right, of course. It doesn't matter what you say, because your actions, in fact your very continuance of this thread, shows you to be the biggest "monkey" of all. Here, have a banana, and fling some more shit, monkey. It's what you do best (in fact, it's ALL you do), whether you care to admit it or not.

Have the following for sale:

1. PRO-2056 Mobile/Home 50 Channel Scanner, new in box, this radio was not used more than 3 hours, all original packing and accessories, asking $125,

2. Icom ICR-1 Handheld Scanner, unblocked, very nice condition, complete with AC Adapter, antenna, belt clip & manual, covers 100kHz to 1300 MHz, asking $300,

3. Military URR-35C, tunable UHF receiver (220-400 MHz), purchased new from government surplus, excellent condition, asking $325,

4. Military Motorola CM520B-1, UHF (220-399.95 MHz) Transceiver, very good condition, rack mount unit, can preset 24 channels or manually tune by way of thumbwheel switches, asking $375,

5. Military PRC-6 Walkie-Talkie, very nice condition, complete with antenna and handset, have 2 will sell both for $75,

6. Military PRC-41, UHF (225-399.9 MHz), backpack radio, have 3 all non-working (needs tubes), comes with all accessories, will sell all for $250,

7. Military ARC-51BX, UHF Transceiver, (225-399.95), aircraft radio, very nice condition, complete with control box, cables and spare speaker, asking $350

All equipment works well (unless noted otherwise) and prices do not include shipping.
Thanks for reading this

4209. BC235 now has attenuator

Newsgroup: rec.radio.scanner
Date: 1998-06-30 00:00:00 UTC
From: Millimeter Wave Report <mmwr@email.msn.com>
Message-ID: <#ixQ$wJp9GA.264@upnetnews05>
Source record: 154507

Gang--

I just received my BC235 today, and noticed that they have now added an attenuator option to the keypad. It does double-duty with the "." key, and the label "ATT" appears above this key. This feature does not appear in the picture on the box, and Rich Wells' excellent review of the BC235 (http://osha.igs.net/~durhamradio/bc235r.htm) specifically mentions that there is no attenuator capability on the first release of this radio. Also, there was no mention of, or instructions for, this button in my instruction manual. The serial number of my scanner is 75027749, and is was delivered via mail directly from Uniden (it was a result of that Holiday Inn promotion I posted earlier!)

Anyway, the new feature is not programmable by channel. It is a simple "on-off" toggle that turns the attenuation (probably 10 dB or so) on or off with each press. It works in conventional, trunk, and manual modes. When attenuation is on, the decimal point in the display blinks. This feature would be useful in areas where intermod and other non-linear interference problems are encountered.

By the way, I have used my scanner for a whole 2 hours now (I just opened the box this evening), and it seems to work very well. A funny thing happened, though, when I first turned it on. My first action was to scan the weather band, where the local 500 watt NOAA weather station is always a good reception test. Well, I scanned the wx channels, and---nothing! Not a peep. Then I entered the weather frequency directly, and nothing. I re-oriented the antenna, moved closer to the window, removed and re-attached the antenna, jiggled the radio a little, adjusted the squelch, and absolutely nothing but hiss came out of the radio. My heart sank thinking I would have to return this dud and wait two weeks or more for its repair or replacement. As a last check, I turned my upstairs base scanner on and checked the weather station and, you guessed it, not a peep! For the first time I can remember, the local NOAA weather radio was knocked off the air, and it happened exactly on the evening I tried to use it to check reception on my new scanner. I quickly hit the service search button on the BC235, and discovered that the scanner is receiving just fine. Was this a cruel joke or what?

Happy scanning!

Regarding Renewal batteries, I discovered (well, it also says so in their instructions) that if you discharge them completely, they're ruined. I left mine in a portable SW radio that also had a clock display when the radio was not on, so it drained batteries constantly. After a couple of months, the batteries were drained completely, and now they will not recharge. So if you are like me, and tend to forget to turn things off, then Renewals are not a good battery choice. Under those circumstances, nicads have served me well.

It appears that a someone at Clark College has issued several
more Rogue Cancels (91 to be exact) in the rec.radio.scanner
News group this afternoon. All of the Cancels were issued
through Open NNTP Servers 207.34.97.3 and news.isdmc.co.kr.

All of the cancels originated from IP address 198.104.131.85
which belongs to Clark College

Clark College (NETBLK-CLARK-NET)
1800 E McLoughlin Blvd.
Vancouver, WA 98663

Netname: CLARK-NET
Netblock: 198.104.128.0 - 198.104.143.0

Coordinator:
Coleman, Jim (JC153-ARIN) jcoleman@CLARK.EDU
(206)750-3803

These are some of the headers I came across this evening:

Hi Bill,

the e-mail Bombs most likely originated from CLARK.EDU again!

IP Address liblab-users.clark.edu (actually 198.104.131.85) is the
same IP address that the 91 Rogue Cancels originated from this
afternoon. The nd.edu is probably an SMTP Server with Relay turned
on.

Both of these cancels originated from 198.104.131.85 via two Open
NNTP Servers:

Rogue Cancels performed on Open NNTP Server news.isdmc.co.kr

There is a mail order outfit called "MetroWest", I believe. They have
such batteries available. Don't have their contact info handy, though I
believe they have a website.

4220. Gander/Shanwick HF Logs

Newsgroup: rec.radio.scanner
Date: 1998-06-30 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.980630130538.28819H-100000@alfa.ist.utl.pt>
Source record: 154568

Hello

Another log for Gander/Shanwick Airspace that were very very
busy...50 different flights reporting positions in just one hour.
Many new registrations for me including a CSA A310 which Ive never
heard before.
If you want you can take a look on the airspace at that time by
downloading:
http://www.geocities.com/SiliconValley/Lakes/9420/shotex8.gif

You will find a super busy North Atlantic Sky! Interesting was to
see how they organize westbound traffic when more than 95% is eastbound.
They put Tower flight (westbound) almost overflying Greenland.

All the best, Andre Brandao

4221. Loop antenna - Gamma match

Newsgroup: rec.radio.scanner
Date: 1998-06-30 00:00:00 UTC
From: Nacho Barrientos <takeoffthispart.nacho.barrientos@apdo.com>
Message-ID: <6na5jidng1@talia.mad.ibernet.es>
Source record: 154569

How can i made a 'easy' gamma match for a loop antenna ?

There is a better solution for feed a loop for high freqs (2 meter) ?

Thanks in advance.

4222. Re: IC-PCR1000

John

Read also John McDermon's reply, to which I also agree, as I have had those same problems, and we are not alone, several other people have had this. The main aspects of this are that the supplied software is crap (although iCOM says it's great and that everyone is really happy with it), would you be happy now if you knew that:

1. They advertise the radio as a 1000-channel scanner, and this is probably what you believe now. Note that you will only be able to scan 50 channels at any one time (i.e. one bank) as there is NO bank or channel linking at all. There is a 'select channel' and 'skip channel' setting, but only works for the current bank, there is no way scan frequencies from different banks at the same time.

2. You cannot leave the software running unnatended, as it will invariably stop scanning or searching after some time, in my case it has been between every 5 seconds to a few minutes, others have reported longer times. This is due to the software, when it looses contact with the radio momentarily, it quits scanning, and stops. There is a feature that lets you scan a range of frequencies, and store each busy channel it finds into a memory in a pre-defined bank. This is useless if the radio stops scanning for no reason after a few seconds, as every time you press the "Auto" button, or the "Prog" button, the search starts at the bottom end of the range again, so you may not get to scan some frequencies EVER.

3. There is no VFO scan feature. All scanning has to be done through pre-programmed search ranges, of which there are only 20. There is no way to just type in a frequency and have the radio scan up or down from it.

4. Download the software from the iCOM web site, and see for yourself. Play with it for a while, and then let me know what you think about it. Specially what you think about how easy, fast and user-friendly the system for wrtiting frequencies to memory channels is...

If you really want a computer-controlled scanner, like the PCR-1000, buy the Optoelectronics OptoCom, which will be out on August. It has many more features than the PCR, and will have support from any 3rd party developer that wants to support it (which should be all of them).
If you want a handheld, wait for the AR82000, which is like the AR8000 but with MANY improvements, one of them includes direct RS-232 connection for direct PC control.
Visit
http://www.optoelectronics.com

Take a look at the Southwest Frequency Directory website at
http://www.azstarnet.com/~danr
The site includes frequencies for the area, as well as information on purchasing a copy of the 300-page Southwest Frequency Directory for Arizona.

At one time I was considering buying one of these radios but not any more. If ICOM doesn't want to lose all potential customers they had better start paying attention to all owner feedback. As for my new radio I am now considering an AOR!

I have NO vendetta against Bill other than a wish that he
would stop making trouble on the NG! Bill has been offered many
different truce options yet he refuses all of them.

One only need to read the NG of rec.radio.scanner to see the
flames Bill Cheek sends & problems he causes!

It appears that a someone at Clark College has issued several
more Rogue Cancels (91 to be exact) in the rec.radio.scanner
News group this afternoon. All of the Cancels were issued
through Open NNTP Servers 207.34.97.3 and news.isdmc.co.kr.

All of the cancels originated from IP address 198.104.131.85
which belongs to Clark College

Clark College (NETBLK-CLARK-NET)
1800 E McLoughlin Blvd.
Vancouver, WA 98663

Netname: CLARK-NET
Netblock: 198.104.128.0 - 198.104.143.0

Coordinator:
Coleman, Jim (JC153-ARIN) jcoleman@CLARK.EDU
(206)750-3803

These are some of the headers I came across this evening:

It appears that a someone at Clark College has issued several
more Rogue Cancels (91 to be exact) in the rec.radio.scanner
News group this afternoon. All of the Cancels were issued
through Open NNTP Servers 207.34.97.3 and news.isdmc.co.kr.

All of the cancels originated from IP address 198.104.131.85
which belongs to Clark College

Clark College (NETBLK-CLARK-NET)
1800 E McLoughlin Blvd.
Vancouver, WA 98663

Netname: CLARK-NET
Netblock: 198.104.128.0 - 198.104.143.0

Coordinator:
Coleman, Jim (JC153-ARIN) jcoleman@CLARK.EDU
(206)750-3803

These are some of the headers I came across this evening:

Of course he's a system administrator. You knew that.
He administers the men's room system down at the Portland
bus station.

Effingham is in central Illinois. There is also a Carbondale as well.

I was about 40 miles north of Effingham a couple of months ago. During the week I was there, it rained literally EVERY day. During one four hour period, the city of Decatur had five tornado warnings. The small town I was in set off their sireen when a funnel was spotted south of town. Apparently there were more funnel clouds than flashes of lightning. Amazing area. The land is so flat you can see for about 35 miles, and it's impressive to watch storms build up.

Here in Minnesota, hardly anyone uses the VHF-Lo Band. When E-skip hit the TV and FM band yesterday (where I usually DX), I hooked up a pair of rabbit ears to the scanner and searched 39-40 and 42-43 MHz. Both were loaded with signals from the southeast US, heard lots of Southern accents. Apparently the Lo band is still used quite a bit down there. Didn't nail down any specific locations, but it was fun to hear distant comms on frequencies that are usually dead here.

If you want more details on how and when to look for skip signals, E-mail me.

Pat

Interesting: Last night in Kansas City, we had severe weather. The Olathe (a town near KC) dispatch center was knocked off the air, and all of Johnson County (on a Motorola trunked system) were ordered to go to nationwide tactical channels, presumably in order to facilitate car-to-car communication with Olathe units which would otherwise be stranded without their central system online. I quickly located the nationwide frequencies (some 46, 15x, and 800 mhz frequencies) in Police Call, and added those freqs into the (normally trunked) B band of my BC895XLT. I went into scan mode versus trunktracking, and picked up residual communications on the JoCo trunked system, plus the emergency traffic on the nationwide channels.

The point I'm making is that - in this instance - having a trunked system was of NO VALUE during a disaster, and all area units, even those with a working trunked system, had to revert to the old style of frequency sharing. Dispatch moved as well.

Having my 895 was fantastic last night, as our area was being overtaken by inclement weather. I had the weather updates from around the county before TV and NOAA in most cases. By switching to scan mode in my trunk bank, I was able to follow the evenings events seamlessly. Scanning on a motorola trunked system is quite reasonable and easy, as modulation does not include the GE/Ericcson trailing beeps - which can only be designed to thwart scanners. Those trailing beeps must surely make the entire system MUCH less efficient, as most responses are short, but the overall frequency usage goes double what's needed. I hope buyers of these systems realize this inefficiency and shop Motorola.

BTW, there were reports that interagency 800 mhz radios in Olathe were having compatibility problems with other systems. I suspect that if JoCo had digital units, they would have to have reverted back to analog last night.

During disasters, expect the unexpected.

Kent

I agree and support how easy it is. Upon installation, just tell
it to install to the directory "NETSCAPE.303" instead of "NETSCAPE". This
way, your versions can be easily distinguished by yourself.
Because of my web page design, I chose to install as many web
browsers as is possible. I have NS 1.22, 2.03, 3.03, and 4.0 all running
in teh same system. I can only have one executed at a time, but they're
all there, and they're all even set up to use the same .ini file, the
same bookmarks file, and even the same cache and news directories.
I have yet to do that with MSIE, but I have all of the various
versions of it installed too.
It may not be practical, but it is very possible, and it works
quite well when set up properly.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

>thinking for you? You might fare better, you
>AOL dungbag.

What's wrong, billie. You snipped the rest of my response. Why? Are you getting doubtful of your putur knowledge? You knock AOL so much but don't seem to understand that they are, by far, the largest and fastest growing ISP in the world.

Actually, you knock AOL because that's all you know how to do. You were called a liar and the truth hurts. My factual statement remains. You ARE a liar and that's a fact. Your pouts and tantrums don't mean squat.

I've read some of your assinine suggestions and they demonstrate someone who WANTS to know what the hell they are doing with PC's. You try real hard, but have a mediocre knowledge at best. I won't even waste my time listening to you on this subject anymore.

Once again you resort to personal attacks when you can't face reality. It's ok. Whatever makes you feel better. You're showing your real side to everyone and that's refreshing for a change.

You are getting pathetic now.

4264. PCR-1000 radio concern & solution.

Newsgroup: rec.radio.scanner
Date: 1998-06-30 00:00:00 UTC
From: John McDermon <mcdermon@usa.net>
Message-ID: <xlam1.4047$P06.653263@pm01nn>
Source record: 154646

A little background first.

This is addressed to one and all who share concern about the easily corrupted EEPROM settings in otherwise fine radio - the PCR-1000. Icom says that you must use ONLY their supplied software, and never any third party or self-written software. (NOTE that they say this AFTER you buy one - their web site contains numerous links to third party software vendor sites - implying that they condone support for their radios. Certainly untrue in the case of the PCR-1000.) They take the position that the EEPROM data can ONLY be corrupted by using software written using "unofficial command protocols" that are widely available on the internet or via reverse-engineering techniques. I doubt their claim is really true, but it is their standard response. There is no data comm handshaking (hardware OR software) going on between the radio and the computer, and it seems plausible (even likely) to me that even a temporary mismatch in baud rate between the radio and computer (such as during a reboot or power/down/up of the radio itself) could send enough "randomly interpreted" commands to possibly corrupt things. I don't know what really corrupted mine. But what I do know is that Icom says they are considering treating future EEPROM corruption in this radio the same as a "hardware modification", thus voiding the warranty on the hardware. YES! If you use software outside the scope of their supplied software, they say that is equivalent to doing a hardware mod! As the tech indicated he took 4 hours to realign mine, I don't look foward to having to pay to get it done again. But if I use the radio, it seems plausible that I might be faced with this. So far since the radio came back from being serviced, I've only turned it on briefly to verify they had fixed the problems.

I bought my PCR-1000 radio early this year thinking I was investing in a quality radio that would satisfy my desire to write some custom radio control software. It was after all, advertised as a totally "computer controlled radio". I had steered clear of the Winradio simply because I didn't want an ISA card inside my computer - requiring me to always keep an ISA computer bus around just for the radio, AND I wanted it more portable than that. I was half right in my choice of radio. It IS a quality piece of hardware. BUT it does suffer an obvious DESIGN FLAW that allows all too easy corruption of the EEPROM data that contains the radio alignment settings. Mine became corrupted after a couple of months of light use - due to who knows what. I did experiment with two third party software packages - both of which are said to be in use by numerous other users without such problems. So who knows what caused the corruption? This remains a mystery.

What I've requested Icom to do is provide a software utility to BACKUP the EEPROM data to a disk file, and a similar utility to RESTORE the disk file to the onboard EEPROM when needed. We are only talking 128 bytes of data here. This would allow the owner to at least safeguard his investment to a reasonable degree. And it seems a far better solution than expecting Icom to recall all these radios to install a "write protect" switch option that they should have had in the first place. So far, Icom seems reluctant to say anything about this proposal. The ONLY response I have received was something along the lines of (I paraphrase here), We are unaware of the need for such a utility. Most of our customers are completely satisfied with the provided software.

I won't at this time belittle their provided software. Suffice it to say that it could be improved upon greatly - and indeed would be if they would release the control protocol documentation. But let's not quibble over their right to be stubborn about this issue.

The real issue for me at this juncture is that they HAVE NOT and seemingly WILL NOT provide ANY MEANS for me to safeguard the EEPROM contents of my radio. This leaves me owning a radio which I CANNOT WRITE SOFTWARE for and cannot even use the third party software I have purchased specifically for this radio. I'm a little PO'd about it all and so far the only thing that seems to ever get Icom's attention is to publicize their policies. Its a curiousity that they are so sensitive about their none support of this radio that these postings do sometimes elicit a response from someone at Icom. I plan to ramain a thorn in their side on this usenet group and the ICOM.qth.net and PCR-1000.qth.net mail lists until I grow too old to care or they come forward and resolve this issue satisfactory.

I'm not talking about then doing anything more than posting a suitable BACKUP/RESTORE utility on their web site - along side their downloadable version 1.3 software (which BTW is a version older than what is shipping with the radios now.)

Any help in identifying someone at Icom who might care would be appreciated. An email address would be nice... I promise to remain civil - yet persistent...

John

Hi--
It's extremely unlikely that you'll ever be able to monitor that type of service. They use digitally synthesized sub-carriers with individual keys for each mobile unit. As a practical matter, that means a pretty strongly encrypted signal at around 2 GHz. If you get a different, more optimistic, answer from anyone else let me know.

Been trying to get my 895 working with MDT without success. Mostly I get garbage on the computer screen with an occasional plain language message. Below are listed the pertinent facts:

1: Computer 386 40 Mhz with 4 external comm ports. 2 with 8250 UART, and 2 with 16550 UART.

2. Interface is the "standard" Hamcomm circuit using a 741 device and configured with pin 3 grounded, 100k feedback resistor (pin 3-6).

3. Have tried Com1/Com2 which use the 8250 and Com3 which uses the 16550. Com4 is tied up with an external modem.

4. Have tried CTS and DSR outputs on the interface.

5. Using the discriminator output of the 895 (Pin 9 of the MC3371). Have used both a 2.2 uf tant in series with the output jack and a direct wire connection.

6. Used both MDTSTUFF and MDTW1234 software in various configurations. I.e. various com ports, normal/inverted etc.

7. The signals are fairly strong (2 bars on the 895 S-meter) and I am quite certain they are mdt 4800 baud, since I do occasionally get some clear copy.

8. Tried 2 different 741 devices.

Ideas? Help?
Thanks....Al

Maybe not today. However, I recently received an advertisement from
Hewlett Packard for a CDMA test set. It generates all the standard
CDMA signals which one can use to repair CDMA phones.

Yes, this test set is in the tens of kilobucks range. However, it is
also the first generation. Anyone who cares to learn about Walsh
codes could probably attempt generating these codes too. Ultimately,
there is a standard for receiving and allocating CDMA channels. The
standard is published. It is in the public domain. How long before
some group of tekkies decide to take on the challenge?

Never is a very long time...

Lying again, I see. You put on the big lie act only after people pointed out
the fact that winradiosales@whatever.stupid.com was posting from san.rr.com

Deny it all you want. It doesn't mean squat. The facts speak for themselves.
You lied and you were caught. You are now in denial and always will be.
Simple. So simple, in fact, that even YOU should understand.

>> I predict you are about to do it again to try and
>> save face with that stupid stunt you pulled.

Just snip my comments again, old man. You're looking more and more like a fool
ever minute! Keep up the great work!

>> You knock AOL so much
>
>So much? Much? How? The fact that you
>are an AOL'er is plenty enough reason to
>knock it once or twice. But that hardly
>constitutes "much".

Once again, all relevance removed to suit your inabilities to deal with the hard
cold fact that you are a goddamn LIAR !

You haven't even tried to refute that fact with "facts" of your own. Guess
there aren't any.

>> but don't seem to understand that they are,
>> by far, the largest and fastest growing ISP in the
>> world.
>
>AOL isn't an ISP. They don't even claim to be.

Uh, yea they are, moron. I'm not even going to debate that assinine comment
with you any farther. You've demonstrated your putur knowledge 100% with that
stupid statement.

[meaningless bullshit snipped]

billie - you are still pathetic and a liar. You can't face the fact that you were caught in a lie and a rather deceptive one at that.

All you can do is twist words and play games like a little child. Too bad you still don't have the sack to deal with it like a man.

Have a good one, yo-yo.

John,

Thanks alot your to-the-point report and thoughts on the
PCR-1000 v/s the untimely defuncts of the EEPROM ..

Used to loud-mouth on the nature of this setup, and guess
what!? I am no longer a list-member of the PCR-1000 list !

Maybe just a coincidence ,but I don't feel there is much
more to be done here before ICOM starts _listening_ to
the all-important customers! A fast buck is what they're
after ,and it will start backfiring something terrible at
their goodselves if they don't stop and listen to you!

Love to see that you don't waste your talent ,John ,like
some of our friends in this newsgroup has taken to lately :)

Best Regards,
Knut Otterbeck
Oslo - Norway

Look everyone, I'm really sorry for everything I've done and said in the past three years on these newsgroups. The problem's originally started when I was unable to perform in bed with my many gay lovers. You can imagine how frustrated I must have become, when everyone in town was pumping my ass full of cum and I could not recropicate, so I just channeled my anger to the newsgroup and Bill Cheek in particular..since after seeing his picture on a book jacket I was smitten with the love bug.

Times have changed now, I just got a perscription for viagra and am in heaven now! I'm tearing up assholes in every public restroom in the Portland area!! This will leave me with very little time for the group, Anyone who wishes to continue talking with me can e-mail me or post a note to alt.homosexual.restroom.sex and I'll get back to you soon.

bye-bye for now, talk to you later!! John Mackey

>If they are all on the same frequency, why wouldn't another Sony's
>handset work with my base?

Most cordless handsets and bases perform a digital handshake when
establishing a connection. This stops your handset from ringing
when a nearby base on the same frequency has an incoming call.
It also prevents unauthorized outgoing calls on your line.

If this ID has been hardwired into your equipment at the factory,
then yes, you'll need to replace both halves.

Charles- I will post my results once I get mine up in the air, right
now its on a test jig out in the yard about 2 feet off the ground, it
is scheduled to go up in a tree about 30 feet or so. so far where it
is now, it appears deaf on VHF-LOW compared to my CB antenna, but then
again, the CB antenna is 35 feet above ground at its feedpoint.

John, Bill has offered several proposals for a truce, the entire newsgroup read them, and you wouldn't accept them. You had to modify them so you could look good in refusing his offers.

Just accept one of his proposals and SHUT-UP so the rest of us can enjoy the newsgroup again. With you quiet and not bothering everyone here things just wouldn't be the same, but I'm sure we would get used to the peace and quiet, very quickly.

So just to re-cap (since you are a little slow sometimes) accept one of Bill's proposals and SHUT-UP !!!!!

Those "questions" are a pretty sorry way to say you posting on topic.

Now to stay on topic, does anyone know how to modify a Pro-508 to receive
satellite TV.

About as stupid as your attempts to stay on topic.

Wake-up and smell something ... anything

Mike

You conveniently ignored my question regarding your alleged status
as a system administrator. How about it? Are you or are you *not*, a
system administrator and if so, what site? I really think you should
clear this up.

This is for a CT500
Power on phone
While holding 'FCN' key enter 904059
Display will show "TEST INPUT"
Hit 'SEND'
Display will show "0400" lower right corner.
Thats the channel number
Use 'up/down' arrows to move between chnls or enter manually(hit '#'
after entering manually.
Get the program "CM" for finding your channel/freq relationships.
I've got that program as a FTP on my web pages(look around yule find it)

http://www.ntr.net/~jwschn/index.html

Doesn't matter who wrote this because it applies equally to anyone on this thread...
>
>This to let you know that John Mackey is telling you a tall tale when he
>states Bill Cheek is the flamer of the newsgroup, John has been flaming
>the rec.radio.scanner newsgroup for three years now.
>What is going is a personal vendetta by John Mackey against Bill Cheek ,
>this all started when John Mackey was kicked off a fido net scanner
>group.

Who cares ?! <rhetorical>

This is how I see it. People on the pre-commercial Internet saw the lackwit mentality of local BBS's (probably you) that propagated onto fido net during that period and cringed, knowing that Usenet would eventually become just like it. Cheek, Mackey, whoever, (probably you): all equally lame. No problem that the content exists, but it's just the ... same ... drooling ... nitwit ... stuff ... over ... and ... over ... again. _Exactly_ like a room of two year olds who think the same joke is funny after saying it a hundred times.

You idiots that keep it going, you could at least keep it fresh. Funny that you blame it on one person, no matter how much of a broke dick he may be. One monkey throws his shit... the rest of the monkeys gotta throw their shit too.

On a 2m repeater, there is one sure-fire way to get a jammer to stop, ignore him. It works within ten minutes 99% of the time. You are dealing with a child-like mentality and the psyche is not that difficult to figure out. Same for the Usenet flamefucks who have no life of which to speak (probably you). I would never beg for a freeze-flame like the poor naive people who think this is an actual, human situation that should (or could) be resolved. That's fine if this is really how you want to spend your time, but there was another post somewhere around here that mentioned that it was all so funny. I thought so too for the first eleven or thirteen posts. But there's not much that's real clever. Same shit, over and over and over. It's incredible, most of you people just aren't that bright. Even the engineer who can make a Pro 2004 wipe his ass, but can't seem to build a web site that even fucking Creskin could find anything in very quickly ... just not real bright that I can tell. (read: people who can only do one or two things very well because connecting abstract concepts is something that generally eludes them)

I'm not complaining, just trying to present the situation a little more accurately than anyone admits to. Carry on, dipshits.

Love,

Cap'n Redeye

4307. Free: Custom Made Radio Desk

I'm very sorry for the wide distribution here.

My father, an avid ham listener for years, is finally moving into a condo and selling his house, at my urging. He's got this immense wooden radio desk which was custom made for him by a carpenter friend of his who was also into ham radio. It's gotta be about 20 years old, but it is still in great shape due to the heavy wood construction. It also has a locking cabinet beneath.

The condo doesn't have room for this desk, so the desk is now up for grabs. Take it off my hands and you can have it for free. I'll even help you lift it into your vehicle (which, by the way, better be a truck or van). If absolutely necessary I can take a snapshot of it and send it to you. If I get no replies it will have to go out with the trash.

We live in South Eastern Pennsylvania, about 30 minutes outside of Philadelphia. Email me with all replies, I am not a regular reader of this newsgroup!

He's in hiding because hams all over SE Michigan hold him in great contempt for helping the much despised lid N8QXP (formerly N8MCY, but he changed his callsign because of the great & well-deserved notariety the N8MCY callsign received at ham swaps & on repeaters) improve his signal!

Face it, Chuckles -- you know why he's blowing you off.

Not exactly. Mungery can cross over into forgery if the poster
continually changes his email address to avoid filters. In extreme
cases where a forger targets an individual or group of regular posters
it can be considered cyberstalking and may be actionable.

Most providers consider this sort of activity net abuse and will
sanction the abuser. You need to establish a clear pattern of abuse
over several days or weeks to present to the abuser's ISP for action.

Like I said in the above mail I do have correct individual ID, system key and connect tone. Also the radio receives fine and have all the correct talk groups. If you are saying that I am rill-raff then you better reconsider as I would not post here with my name and e-mail address if I wanted to access any system without the system operators permission.

I work as a reserve deputy sheriff and have access to four motorola trunking systems here in the county. The MTS2000 I have works fine. Just have a problem with the MTX8000.

I had that happen once to a small mixer. There was a bit of smoke. Upon opening it, the problem was obvious. A capacitor had 'sploded. There was this huge furry thing in the middle of the circuit board and little bits of paper flew everywhere.

>with a sig file announcing Chicago University Alumini. Is this Glenn?

No, it must be a different D.P. Roberts. The closest I've been to Chicago is Decatur. Unless you count listening to WLS and that evening guy followed by John "Records" Landecker, the late Yvonne Daniels, and Charlie Van Dyke in the morning -- until I could barely keep my eyes open. I was very sorry to hear about Yvonne Daniels. WLS and local KUDL AM (1380, long gone and towers down) practically raised me on music, and I've lost track of all my favorite announcers. One local announcer, Bob Cole, passed away back in Feburary. He still lived in the area and I never knew it until I saw the obit.

4330. FREQUENCIES NEEDED

Hey Doug-

No wonder you don't have enough time! The internet and the network
adminsitrators are not in need of someone calling them "twenty or so
times a week while tracking down new open servers" attmepting to play

net cop.

Get a life guy, if you called me about the system I administrate I would hang up on you & if you called again I would report you for abuse & harassment.

==========

John,

I'm curious as to just what site you adminiister. Why don't you enlighten everybody. You aren't the site administrator for parg.org are you? Heh, Heh, Heh! Just when I think I've heard everything, you open your mouth and amaze me.

I have tried different antennas and found that the hustler mobile worked the best for me. I bought and permanently installed it on my car five years ago, and it is still going strong.

I am a distributor of the Midland WeatherMax Plus Weather/All Hazard
VHF Radio with Alert. It is set to your local tower, and
will sound a loud alarm (90 decibal) when the NWS
or N.O.A.A. sends out an alert. It does cover more than one county,
but, storms move from county to county and sometimes pretty quickly.
It would be a great comfort to be warned in plenty of time when foul
weather is heading your way. The cost of this unit is 59.00 + 5.00 s&h.
For more info, just e-mail me. Andy Ferguson alferg@interpath.com

Hello there...

I have for sale a Radio Shack PRO-39 portable scanner. Has 200 memory channels (well, it's actually 210 if you count the 10 monitor channels also,) Hyperscan mode (blazing 25 channels per second scanning and 50 steps per second searching rate.) The scanner covers the following frequency bands: 30-50, 50-54, 108-136.975, 137-144, 144-148, 148-174, 380-450, 470-512, and GAPLESS 806-960 MHz (with proper 30 kHz spacing in proper portions of the 800 MHz band, and normal 12.5 kHz spacing elsewhere.) (Mod was professionally done.) The scanner is in MINT condition (I hate to use the word "mint," but in this case, it truely DOES apply!!!) There are NO SCRATCHES anywhere on the scanner. Scanner comes with the following accessories: "Rubber Duck" type antenna, six Radio Shack Rechargeable AA NiCADs (1.25V, 650 mAh) catalog # 23-125, Radio Shack Home AC adapter/charger (9V DC 300mA output) catalog # 20-188, Radio Shack Mobile DC adapter/charger (Catalog # 270-1562.) Plus I have the original box, packaging, and manual. Date code 8A3. Made in Japan. $200 for everything. Willing to ship COD (cash only, no checks!) or postal money order. Thanks for reading.

No, but it is nice to know that a trooper or state wildlife officer - both
who often work many miles from back-up - will be able to talk to other agencies
if they need help in a hurry.
It's also nice to know that following a hurricane or other natural
disaster the various agencies will be able to communicate with each other with
playing and electronic version of the old "telephone game."
I was in Homestead shortly after it was hit by Hurricane Andrew in 1992.
One of the major problems they faced was inter-agency communication.
Sure it'll be a pain in the ass once the switch over here in my area, at
least until Uniden or one of the other mfgs. comes through with a
digitally-compatible TrunkTracker.

X <fillip@banet.net> wrote:

> I've heared of it too in the very same magazine.
> Hey Bill Cheek , you know anything about this ?

Know, as in present tense? No.

As inpast tense? Yes. And with more than
just computer monitors, too. Monitors are the
least of your worries, though, because it takes
some sophisticated stuff to "copy the mail" off
someone's monitor.

However......if you have a CB radio on in
your house, it is fairly simple to detect
it from off-premises, and only slightly
less simple to actually pull "intelligence"
off the emission.

What I mean by that is if you are in the same
room as your CB sitting there in the receive mode
(and I presume this could also be true of ham
radios, and other passive receivers), then as
you speak or make other sounds in the area,
those sound waves penetrate the receiver and
the PLL and local oscillators thereby imparting
a low level modulation to the circuit.

If that circuit radiates, and most do, then it
is conceivable someone nearby can intercept
that emission; tape it; and run it through a
DSP or other noise processor, and determine
what was spoken.

It's more or less the same principle as bouncing
a laser light off a window and detecting it down-
range. Sounds within the room vibrate the window
which modulates the down-range part of the beam.

I've not had any real success with detecting
and decoding monitor emissions, but I'm certain
that it can be done, given an unlimited budget
and lots of expertise and manpower.

It is fairly easy to test for receiver emissions
using a scanner or spectrum analyzer. Once
you find an "airborne emission", tape record
it at a high level, almost to the point of
clipping and distortion. Then thump emitting
receiver with a screwdriver handle so as to make
as loud of a local noise as possible.

If that thump is detectable on the remote recording,
then it is eminently possible for more sophisticated
techniques to pull room sounds off the signal!

I mentioned CB radios because I tested some a
few years ago. Wow! But there is nothing special
about a CB radio's PLL and local oscillators; all
receivers have them, including TV's, scanners,
tabletop and pocket radios, etc.

In conclusion, I do have to say there is little
cause for panic down here at the hobby level.
However....governments and larger corporations
that stand to lose or win based on security....
and where cost and sophistication are no object;
had better sit up straight and take countermeasures.

That most assurredly would apply to computer monitors.

But I live in Northwest Houston and don't want to hear the numberous "High Tide" alerts for Galveston. And if I come home five minutes after an alert has sounded, then how will I know that? And what if I need to attach an external antenna because of my distance to the NWS transmitter? And where do I go if I have a problem with it?

>Trunker WILL Monitor the System But ID'ing the Talkgroups is a pain

Is it 2d3d up there also? trunker has identified it as networkable
with a [6] next to it here in Fort Lauderdale, it's all connected?

FWIW...the talkgroups and some other info are listed here, now all we
need is a d/a converter...

http://www.laker.net/mikef/flastro.txt

If I understand right, the transmissions are not encrypted, just
digital...so if you had a compatible radio perhaps the discriminator
output from the tracking scanner could be fed into it to demodulate
it? I would guess the radios they are using now do cost a pretty penny
so I doubt anyone will be trying this anytime soon.
The trunker.exe program tracks it great, you can tell who's talking
anyway...although listening to the tracked digital will quickly drive
you insane...I was trying to see if any of the com's would come
through analog..guess not..I wonder if the system is capable of
non-digital operation. Enough rambling for me...

So don't open it, Mackey, and then you'll
see it work at its best. Otherwise, stick
one finger in your mouth and one up your
grump stump and wait for somebody to holler
"Switch!", at which time I'll have your
alter-ego jammed back on my Twit List.

Understand?

It's YOUR behavior, wingnut, that attracts
attention. Mine would be impeccable if
syphiletic sphincters like you were to
play like a tree and *leave*.

Stpes?

You're not expressing yourself very well
tonight, Smacksie. What does "stpes" mean?
What kind of drugs are you taking tonight?

But you are an expert at lack of candor and
a dimunitive veracity. Geez, Smacksie, everything
about you is dimunitive. Not only that, but
you are a peckerwood imbecilic hermaphroditic idiot.

You KNOW what I mean, Stink!

Hey, you syphiletic chancroid, I don't DO or
consider anything you ask. You don't ask me
shit, smegma breath. Just accept the proposal
I laid on you or not. That's as good as it gets.

There you go again Mackey , Lying and saying things that are not true, you don't speak for the people on the newsgroup , in fact the majority of the group want to see you leave the newsgroup because of your constant flaming and personal vendetta against Bill.
Bill has already offered you many deals , you go your way and not talk to him or speak of him and he will go his way .
But you don't what things to stop as you keep trying to place extra conditions on the deal that does not have anything to do with the deal offered .
All you want is Bill off of the newsgroup, well that is not going to happen John so you better get use to it and stop your lying saying Bill is the flamer because he is not , You are the flamer John and there is proof of that.
John your trying to play the victim but it is not going to work as anyone with a lick of sense can do a a search on dejanews and see that you are the flamer and cause of all the problems on the newsgroup..

Me, too. Here we are in a virtual reality and
some people gotta act like it's a church or
maybe a city council meeting.

> Maybe I'm just a nut, but- I love it! I'm serious!

So's everyone else; just that dang few 'fess up.

> Don't stop (but don't
> take each other too seriously, either!).

It's not possible to take the hermaphrodite very
seriously.

> Always smiling- Alan

Me, too. Usually laughing, especially *at* Smacksie.

Hi All,

I've been looking for Bobs number and I can't find it ANYWHERE! and it ain't listed! I already know his callbook info. Does anyone in the S.E. michigan area know his whereabouts? I posted this here, cause I knew he was a scanner nut. Is he still alive?

Where you is bob!

If you know him, tell him to call me at the number listed on my website!

(that is if he ain't on the net...)

73's

N8QXP (former N8MCY)

He put up my tower! and I haven't been able to find him sense!
